Fully integrating the DSM-5, Durand, Barlow, and Hofmann describe abnormal psychology through their standard-setting integrative approach -- the most modern, scientifically valid method for studying the subject. Through this approach, students learn that psychological disorders are rarely caused by a single influence, but rooted in the interaction among multiple factors: biological, psychological, cultural, social, familial, and even political. A conversational writing style, consistent pedagogy, and real case profiles provide a realistic context for the scientific findings. This eighth edition highlights groundbreaking updates to research findings and the latest innovations in the treatment of mental disorders. Fully updated for DSM-5, this exciting revision complements the abnormal psychology course by providing 17 case histories based on the authors' clinical experiences. Each case study goes beyond DSM-5 diagnosis to describe the individual's history and symptoms, a theoretical discussion of treatment, a

specific treatment plan, the actual treatment conducted, and assessment questions for students. The casebook also provides three "You Decide" cases -- written without diagnosis or treatment, so students can identify disorders and suggest appropriate therapies. This new edition adds assessment questions to the end of each case and also features three brand new cases: hoarding, somatic symptom disorder, and gender dysphoria.

For more than 30 years, numerous independent reviewers, student advice writers and even competitors have heralded HERGENHAHN'S AN INTRODUCTION TO THE HISTORY OF PSYCHOLOGY as the best in the field--and for good reason. It was the first History of Psychology text to include basic pedagogy--elements such

as summaries and study questions that several current alternatives still lack. It engages students with interesting biographical tidbits--the fun facts that readers fondly remember after other details fade. Grounded in original source material and contemporary scholarship, the book provides breadth and depth of analysis unrivaled by works of similar length. In the eighth edition, author Tracy Henley continues to demonstrate that most of the concerns of contemporary psychologists are manifestations of themes that have been part of Psychology for hundreds--or even thousands--of years. Through a thoughtful and accurate balance of developmental, clinical-diagnostic, and experimental approaches to child and adolescent psychopathology, Eric Mash and David Wolfe's ABNORMAL CHILD PSYCHOLOGY remains the most authoritative, scholarly, and comprehensive book in its market. Accessible to a

broad range of readers, the book traces the developmental course of each disorder and shows how biological, psychological, and sociocultural factors interact with a child's environment. Case histories, case examples, and first-person accounts are at the heart of the text, illustrating the categorical and dimensional approaches used to describe disorders and bringing life to the theories discussed. The authors also consistently illustrate how troubled children behave in their natural settings: homes, schools, and communities. Up-to-date and forward-looking, the text covers the DSM-IV-TR and dimensional approaches to classification as well as evidence-based assessment and treatment, contemporary research, and the latest theories related to the predominantly inattentive ADHD subtype, early-onset and the developmental propensity model of conduct disorder, the triple vulnerability model of anxiety, the tripartite model in children, depression, and autism.
