Writing Philosophy Papers Springer

This inaugural handbook documents the distinctive research field that utilizes history and philosophy in investigation of theoretical, curricular and pedagogical issues in the teaching of science and mathematics. It is contributed to by 130 researchers from 30 countries; it provides a logically structured, fully referenced guide to the ways in which science and mathematics education is, informed by the history and philosophy of these disciplines, as well as by the philosophy of education more generally. The first handbook to cover the field, it lays down a much-needed marker of progress to date and provides a platform for informed and coherent future analysis and research of the subject. The publication comes at a time of heightened worldwide concern over the standard of science and mathematics education, attended by fierce debate over how best to reform curricula and enliven student engagement in the subjects. There is a growing recognition among educators and policy makers that the learning of science must dovetail with learning about science; this handbook is uniquely positioned as a locus for the discussion. The handbook features sections on pedagogical, theoretical, national, and biographical research, setting the literature of each tradition in its historical context. It reminds readers at a crucial juncture that there has been a long and rich tradition of historical and philosophical engagements with science and mathematics teaching, and that lessons can be learnt from these engagements for the resolution of current theoretical, curricular and pedagogical questions that face teachers and administrators. Science educators will be grateful for this unique, encyclopaedic handbook, Gerald Holton, Physics Department, Harvard University This handbook gathers the fruits of over thirty years' research by a growing international and cosmopolitan community Fabio Bevilacqua, Physics Department, University of Pavia

History, Philosophy and Science Teaching: A Personal Story Imperial College Press

A work by John Locke about education.

Key Concepts in the Philosophy of Education Taylor & Francis US

John Dewey's *Democracy and Education* addresses the challenge of providing quality public education in a democratic society. In this classic work Dewey calls for the complete renewal of public education, arguing for the fusion of vocational and contemplative studies in education and for the necessity of universal education for the advancement of self and society. First published in 1916, *Democracy and Education* is regarded as the seminal work on public education by one of the most important scholars of the century.

Academically Adrift Oxford University Press

A general introduction to key issues in the philosophy of education. The chapters are accessible to readers with no prior exposure to philosophy of education, and provide both surveys of the general domain they address, and advance the discussion in those domains.

The Joy of Not Knowing Mastering the Teaching of Adults Showing educators how to be the best adult education teachers that they are capable of, this book ranges from personal assessment strategies to approaches for facing ethical decisions.

Introduction to the Philosophy of Education The intertwining careers of William Torrey Harris (1835-1909) converge in twelve of the Annual Reports of the Board of Directors for St. Louis Public Schools. Harris formulated most of the essential features of these twelve reports as the Superintendent of Schools from 1867 to 1869. These particular reports—which have been acclaimed nationally and internationally—are said to be among the most valuable official publications in American educational literature. They are far different from the descriptive documents originally intended by their author. This study demonstrates that Harris provided an authentic philosophy of education, a set of interrelated philosophical principles and their applications to educational problems. The substance of Harris's philosophy of education is focused upon a broadly based philosophical anthropology in relationship primarily to the purposes, curriculum, and teaching methods in intellectual, moral, and religious education.

Learner-Centered Teaching Charles C Thomas Pub Limited

This volume assesses how far the ideas and achievements of the 19th century British Idealist philosophical reformers are still important for us today when considering fundamental questions about the structure and objectives of the education system in England and Wales.

Education, Philosophy and Well-being Routledge

This book represents a collection of papers from one of the founders of the new Philosophy of Chemistry. It is only the second single-author collection of papers on the Philosophy of Chemistry. The author is the editor-in-chief of *Foundations of Chemistry*, the leading journal in the field. He has recently gained worldwide success with his book on the periodic table of the elements titled *The Periodic Table: Its Story and Its Significance*. This volume provides an in-depth examination of his more philosophical and historical work in this area and further afield.

Research in Mathematics Education in Australasia 2012-2015 Penguin

Originally published in French as "La Philosophie, une Ecole de la Liberte. Enseignement de la philosophie et apprentissage du philosophe : Etat des lieux et regards pour l'avenir." - This study is dedicated to all those who engaged themselves, with vigour and conviction, in the defence of the teaching of philosophy a fertile guarantor of liberty and autonomy. This publication is also dedicated to the young spirits of today, bound to become the active citizens of tomorrow.

Philosophical Essays Routledge

This book offers a clear and lively survey into the key terms and concepts of philosophy which are of interest and relevance today.

Accepting Wittgenstein's Challenge Routledge

The topics covered in this volume, originally published in 1973, include the need for a more adequate concept or definition of education, the issue of whether indoctrination is compatible with education, particularly with moral education, and the processes of judging the merits of different approaches to aesthetic education. Two contributors present complementary analyses of the relations between freedom as a characteristic of institutions and the process of learning to be a free man. There is discussion of the neglected subject of rights and duties in education, with special emphasis on the question of a universal right to education. The volume concludes with papers on the relevance of philosophy to the practical judgments of educators and to education as a field of study.

The hidden cause of America's broken education system--and how to fix it John Wiley & Sons

The essays bring to contemporary debates about educational research both a first hand familiarity with the practices and arguments of the educational research community and a clear grasp of the ways in which philosophical sources and analysis can inform them. They are both measured and passionate - sparked by an intense personal curiosity, which takes Bridges into unexpected resources and territory (such as the insights of museology into debates on educational research as narrative fiction) as well as more familiar material relating to, for example, issues about the assessment of quality of educational research and the concern for its relevance. The book makes an articulate case, by its own example as well as in its argument, for the continuing contribution of philosophical thinking to the development and critique of educational research. It will be essential reading for researchers already engaged in this development and for masters and doctoral students who are coming to terms with educational research, and it offers a contribution to the literature in philosophy of education which is richly grounded in the wider field of educational research.

International Handbook of Research in History, Philosophy and Science Teaching Routledge

The period during which Bernard Lonergan delivered the eleven lectures in this volume was one of important transition for him: he was moving rapidly toward a new conception of theology and its method; and he was on the verge of what is now recognized as a major breakthrough in his thought on method, the idea that came to him in February 1965 of the eight functional specialities. While the lectures maintain a continuity with Lonergan's previous work, they also reveal new and significant ideas, especially in regard to his drive toward a new conception of theology as a whole, and his particular concern for the relevance of theology to the spiritual life. The lectures here include 'The Redemption,' 'Method in Catholic Theology,' 'The Philosophy of History,' 'The Origins of Christian

Realism,' 'Time and Meaning,' 'Consciousness and the Trinity,' 'Exegesis and Dogma,' 'The Mediation of Christ in Prayer,' 'The Analogy of Meaning,' 'Philosophical Positions with Regard to Knowing,' and 'Theology as Christian Phenomenon.' This volume provides a key to understanding the development of Lonergan's philosophical and theological thought, his major influences, and the pivotal moments of transition in the road leading up to Method in Theology and beyond.
