Practical and applications (rather than theory) based, this book focuses on the needs of individuals interested in starting a small business -- primarily those organized as sole proprietorships,

partnerships, or small Subchapter S corporations. It emphasizes small businesses exclusively -- with specific examples of the non-corporate market. The book is mathematically accessible to those with limited mathematical background (formulas are explained rather than derived, and only basic math is used in illustrations and solutions). A full case study is referred to throughout narrative and an accompanying CD-ROM includes all tables in Excel format.

A wide gap still exists between Western concepts and their application in the ex-socialist countries during transition. Most Western models in financial management make assumptions about the efficiency and stability of markets and the signals that can be obtained and also assume that traditional accounting information is available and can be used for management purposes. A new paradigm is needed to manage the finance function in a transition economy experiencing hyperinflation since standard assumptions are not valid in most ex-socialist countries. This book describes the adaptations of financial techniques as it reviews standard financial concepts and tools, adjusts them

when necessary to the unique conditions in the ex-socialist enterprises, and then presents the restructuring context and some strategies that are based on the application of these tools.
