The most comprehensive
and up-to-date collection
of its kind, Case Studies in

Biomedical Ethics:
Decision-Making,
Principles, and Cases,
Second Edition, explores
fundamental ethical
questions arising from
real situations faced by
health professionals,
patients, and others.
Featuring a wide range of
more than 100 case
studies drawn from
current events, court
cases, and physicians'
experiences, the book is

divided into three parts.
Part 1 presents a basic
framework for ethical
decision-making in
healthcare, while Part 2
explains the relevant
ethical principles:
beneficence and
nonmaleficence, justice,
respect for autonomy,
veracity, fidelity, and
avoidance of killing. Parts
1 and 2 provide students
with the background to
analyze the ethical

dilemmas presented in Part 3, which features cases on a broad spectrum of issues including abortion, mental health, experimentation on humans, the right to refuse treatment, and much more. The volume is enhanced by opening text boxes in each chapter that cross-reference relevant cases in other chapters, an appendix of important ethical codes, and a glossary of key terms.

With at least 40% new or updated content since the last edition, Clinical Decision Support, 2nd Edition explores the crucial new motivating factors poised to accelerate Clinical Decision Support (CDS) adoption. This book is mostly focused on the US perspective because of initiatives driving EHR adoption, the articulation

of 'meaningful use', and new policy attention in process including the Office of the National Coordinator for Health Information Technology (ONC) and the Center for Medicare and Medicaid Services (CMS). A few chapters focus on the broader international perspective. Clinical Decision Support, 2nd Edition explores the technology, sources of knowledge, evolution of successful forms of CDS, and organizational and policy perspectives surrounding CDS.

Exploring a roadmap for CDS, with all its efficacy benefits including reduced errors, improved quality, and cost savings, as well as the still substantial roadblocks needed to be overcome by policy-makers, clinicians, and clinical informatics experts, the field is poised anew on the brink of broad adoption. Clinical Decision Support, 2nd Edition provides an updated and pragmatic view of the methodological processes and implementation considerations. This book

also considers advanced technologies and architectures, standards, and cooperative activities needed on a societal basis for truly large-scale adoption. At least 40% updated, and seven new chapters since the previous edition, with the new and revised content focused on new opportunities and challenges for clinical decision support at point of care, given changes in science, technology, regulatory policy, and healthcare finance. Informs healthcare

leaders and planners, health IT system developers, healthcare IT organization leaders and staff, clinical informatics professionals and researchers, and clinicians with an interest in the role of technology in shaping healthcare of the future.

Demonstrating and Evaluating Competency in Comprehensive Care
Cengage Learning
Created especially for nurses, the Clinical Decision Making series helps to bridge the gap between content

knowledge and clinical application. Case Studies in Medical-Surgical, Pharmacologic, and Psychiatric Nursing provides 120 nursing case histories that include critical thinking questions and answers based on real-life client situations. Every case contains a blueprint of variables that must be considered while evaluating a particular scenario, and are pertinent concerning the client nursing protocol and setting of care. Examples of these variables include age,

gender, cultural influences, pre-existing conditions, legal issues, or communication skills. Each blueprint and case is different just as each clinical situation is unique. By simulating the decision-making process, learners gain the confidence needed to make informed clinical judgments that will make them successful practitioners. Simply stated, Clinical Decision Making shortens the distance between theory and practice like no other educational tool!

Cases in Pediatric Acute Care presents over 100 real-world pediatric acute care cases, each including a brief patient history, a detailed history of present illness, presenting signs and symptoms, vital signs, and physical examination findings. Ideal for developing a systematic approach to diagnosis, evaluation, and treatment, this resource provides students and advanced practitioners

with the tools required to deliver comprehensive care to acute, chronic and critically ill children. The cases encompass a wide range of body systems, medical scenarios, professional issues and general pediatric concerns, and feature laboratory data, radiographic images and information on case study progression and resolution. Develops the essential skills necessary to provide the best possible pediatric acute care Discusses the most appropriate differential

diagnoses, diagnostic evaluation, and management plans for each case Presents cases related to pulmonary, cardiac, neurologic, endocrine, metabolic, musculoskeletal, and other body systems Highlights key points in each case to quickly identify critical information Cases in Pediatric Acute Care is an excellent resource for advanced practice provider students and pediatric healthcare providers managing acutely ill children.

Over the past decade health care systems around the world have placed increasing importance on the relationship between patient choice and clinical decision-making. In the years since the publication of the second edition of Shared Decision Making in Health Care, there have been significant new developments in the field, most notably in the US where 'Obamacare' puts

shared decision making (SDM) at the centre of the 2009 Affordable Care Act. This new edition explores shared decision making by examining, from practical and theoretical perspectives, what should comprise an effective decision-making process. It also looks at the benefits and potential difficulties that arise when patients and clinicians share health care decisions. Written by leading experts from around the world and utilizing high quality evidence, the book

provides an up-to-date reference with real-world context to the topics discussed, and in-depth coverage of the practicalities of implementing and teaching SDM. The breadth of information in Shared Decision Making in Health Care makes it an essential resource for policy-makers and health care workers. As health care systems adapt to increasingly collaborative patient-clinician care frameworks, this will also prove a useful guide to SDM for clinicians of all

disciplines.

Clinical Decision Making Springer

This book takes a behavioural approach to examine six important housing questions: tenure decision, gentrification, place attachment, housing bubbles, housing wealth, and residential satisfaction. Using experimental and field data, the book demonstrates the effects of six behavioural biases and heuristics (i.e., anchoring and reference dependence, loss aversion, mental

accounting, endowment effect, herd behaviours, and social comparison) on these housing decisions. The first part of the book introduces the questions and provides a behavioural science toolbox before the second part adopts a real-world case study approach. Real data sets and suggested answers are provided, and the cases come from the UK, USA, and China. Background information is given in each case to facilitate the understanding of the case data and question, as well

as the discussions on the results. This book is ideal supplementary reading on a variety of courses such as housing studies, economics, real estate, research methods, and for students and academics who are interested in the application of behavioural science in housing decisions.

Social work students consistently struggle to apply theory to practice, or use the knowledge of textbooks and classrooms in the field. Vignettes and scenarios represented in textbooks are often simplistic, too tidy to be realistic, and with clean resolutions. Next Steps: Decision Cases for Social Work Practice highlights the complex, messy nature of social work practice in a way that is engaging to students, allowing them to step into

the role of a practicing social worker. This book is a collection of decision cases from multiple areas of social work practice, designed to enhance the quality and depth of classroom case discussion and analysis. These realistic, compelling cases present dilemmas about which even experienced practitioners may disagree. This allows rich classroom discussion that enhances critical thinking, provides real-life application, and creates numerous opportunities to apply content and

knowledge acquired throughout a social work education experience.

Cross-cultural Perspectives in Medical Ethics

Case Studies in Neurology
Reflecting the latest practices in the field, *Clinical Decision Making: Case Studies in Medical-Surgical Nursing, 2nd edition* bridges the gap between classroom knowledge and clinical application. Emphasizing holistic nursing care, this resource helps nursing students sharpen their critical thinking skills and

gain experience applying what they have learned. The more than 40 medical-surgical case histories and related questions, and responses are based on real-life client situations. Every case contains an introductory blueprint of variables that must be considered while evaluating a particular scenario concerning the client, nursing protocol, and setting of care. Each blueprint and case is different, just as each clinical situation is unique. As learners simulate the

actual decision-making process, they gain valuable experience making informed clinical judgments that will help them become successful nurses. Categorized by complexity, the book appeals to a broad range of learning levels and styles. This essential text presents and explains every aspect of clinical decision making, providing a sound base of knowledge for confidence and accuracy. Its format incorporates principles of problem-based learning methods that are used in many nursing programs. The revised Second Edition contains 20 new case studies of the most common diseases and disorders encountered in family practice; each includes a review of all the information necessary for developing a plan of

care and emphasizes differential diagnosis and clinical reasoning for the nurse practitioner. The text's problem-oriented format promotes and strengthens critical thinking skills. Additional features include: tutorials; holistic health considerations; case accuracy; laboratory tests that require learners to interpret tests and their impact on a patient's condition; interdisciplinary collaboration; decision trees that are applicable to each case; research-based outcomes;

complementary therapies; and much more. A Brandon-Hill Recommended Title. Springer Publishing Company
CLINICAL DECISION MAKING: CASE STUDIES FOR THE OCCUPATIONAL THERAPY ASSISTANT is a first of its kind text designed to help students, entry-level practitioners and professors work on fostering clinical reasoning skills in the provision of occupational therapy assistant services. The case studies in this book incorporate

the most common practice settings across the continuum of care and follow clients as they progress across this continuum. Organized broadly around the current Occupational Therapy Practice Framework of the American Occupational Therapy Association, each case contains examples of how this framework can be applied to a particular client. The case studies in this book are meant to provoke discussion among your students about treatment planning,

ethical issues and collaboration with the client, family and other healthcare providers. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

 Established as a staple reference in the EMG

laboratory, Clinical Electromyography: Nerve Conduction Studies is now in its revised, updated Third Edition. Dr. Oh, a world-renowned authority, provides encyclopedic coverage of current nerve conduction techniques and their clinical uses. This edition's new chapter on special nerve conduction techniques describes studies such as motor unit number estimation and muscle fiber conduction velocity and discusses their clinical value and limitations. Coverage also

includes new nerve conduction techniques and recent developments in electromyographic diagnosis of immunologically-mediated neuropathies, segmental demyelination, mild carpal tunnel syndrome, and neurogenic thoracic outlet syndrome. More than 500 illustrations complement the text. Strengthening Clinical Decision Making F A Davis Company Clinical Case Studies for the Family Nurse Practitioner is a key resource for advanced

practice nurses and graduate students seeking to test their skills in assessing, diagnosing, and managing cases in family and primary care. Composed of more than 70 cases ranging from common to unique, the book compiles years of experience from experts in the field. It is organized chronologically, presenting cases from neonatal to geriatric care in a standard approach built on the SOAP format. This includes differential diagnosis and a series of critical

thinking questions ideal for self-assessment or classroom use.

« Clinical Decision Making for Adult-Gerontology Primary Care Nurse

Practitioners provides a systematic approach to clinical decision making for a wide variety of commonly encountered primary care issues in adult and geriatric practice. Unlike other textbooks, it details a progressive approach to handling such issues by focusing on the complete visit from history intake through management and follow-up care. The goal of this text is to enable students to learn a systematic approach to clinical problems and use evidence-based guidelines

to direct their management decisions. Designed for both the student and the newly practicing NP, this text serves as a guide to increase the practitioner's confidence with the application of assessment skills, diagnostic choices, and management approaches. Throughout the text students will find guidelines for the adult-gerontology nurse practitioner role as well as a real-life case studies that demonstrate what an NP may encounter in the clinical practice

environment. The text is written at an application level, employs up-to-date evidence-based literature, and features practice questions—all of which make this a strong resource for certification preparation. »--

Decision analysis has become widely recognized as an important process for translating science into management actions. With climate change and other systemic threats as driving forces in creating environmental and

engineering problems, there is a great need for understanding decision making frameworks through a case-study based approach.

Management of environmental and engineering projects is often complicated and multidisciplinary in scope and nature, thus issues that arise can be difficult to solve analytically.

Multi-Criteria Decision Analysis: Case Studies in Engineering and the Environment provides detailed description of MCDA methods and tools

and illustrates their applications through case studies focused on sustainability and system engineering applications. New in the Second Edition: Addresses current and emerging environmental and engineering problems Includes seven new case studies to illustrate different management situations applicable at the international level Builds on real case studies from recent and relevant environmental and engineering management experience Describes

advanced MCDA techniques and extensions used by practitioners Provides corresponding decision models implemented using the DECERNS software package Gives a more holistic approach to teaching MCDA methodology with a focus on sustainable solutions and adoption of new technologies, including nanotechnology and synthetic biology Given the novelty and inherent applicability of this decision-making framework to the

environmental and engineering fields, a greater number of teaching tools for this topic need to be made available. This book provides those teaching tools, covering the breadth of the applications of MCDA methodologies with clear explanations of the MCDA process. The case studies are implemented in the DECERNS software package, allowing readers to experiment and explore and to understand the full process by which environmental managers

assess these problems. This book is a great resource for professionals and students seeking to learn decision analysis techniques and apply similar frameworks to environmental and engineering projects *A Critical Thinking, Case Studies Approach* Cengage Learning Created especially for nurses, the Clinical Decision Making series helps to bridge the gap between content knowledge and clinical application. This portfolio presents intimate case study narratives, providing an in-depth account of DNP best practices for clinical practice. The book covers important topics such as the development of DNP clinical competencies, performance objectives, utilizing evidence-based practice, a DNP approach to adolescent care, caring for the chronically ill, mental health care, adult health care, and many more. The main purpose of this book is to provide DNP faculty and students with a reliable and

detailed guide to use when implementing a format to document care provided. The case narratives presented in this book differ from the traditional case study format: students delineate all aspects of the decision-making process, identify the evidence that supports the decision, discuss the robustness of the evidence, analyze the effectiveness of the

clinical decision, and critically reflect on the overall case. This detailed format captures the complexity and details of clinical practice. Key Features: Incorporates descriptive narratives that help readers understand the complex cognitive processes employed during the provision of care Presents information based on actual patient encounters that include

the reasons for selecting the case, assessment, care provided, and outcomes Provides evidence for all decisions made in the portfolio, which is "leveled" according to the Oxford Centre for Evidence Based Medicine Concludes each case narrative with the DNP student's own reflection and analysis of how successfully each competency was fulfilled
