Turner syndrome - NHS The National Institute for Health and Care Excellence (NICE) has produced guidance about somatropin, the growth hormone sometimes used to treat Turner syndrome. Studies reviewed by NICE found somatropin increased height by around 5 to 9cm (2 to 3.5in). A number of different types of somatropin are available. Turner syndrome - Treatment - NHS The Turner Syndrome: A Guide for Families discusses growth in depth such as bone age, mosaicism and growth, growth charts, how to use a growth chart, quality of life and short stature, and best outcomes of for increased adult height in TS.
