Falling Into Queensland
 Since my first book "See The Air - The Essential Guide for Optimal Air Quality in Your Life" was published back in 2017 many have read it, and many have followed my example and tried to write and describe the problem too. There is some interest in the field, and I want to contribute even more by gathering all the available information regarding air pollution and its impact on health in this book. My intention here is clear, I want to shock people and authorities and make it clear that there is proof. Air pollution kills millions of people every year and there is no excuse not to listen to brilliant scientists and the noble work they have done.
Ultimate Speed Secrets
 Giving new meaning to the term "fast food" Rest-stop grade F meat patty? Nah. Nuggets of reconstituted poultry bits? Pass. Deep-fried fish discus? No, really, thanks all the same. It's time to

bid farewell to the roadside meal as you know it. Nearly twenty years ago, Chris Maynard and Bill Scheller opened the world's eyes to the beautym of car-engine gastronomy in the original Manifold Destiny. And now that another generation of both drivers and eaters has emerged, the cult classic is due for an overhaul. In this shiny, spanking-new edition, learn how to make s'mores in your Scion, poach fish in your Pontiac, even bust out a gourmet snack from under the hood of your Escalade. With step-by-step diagrams, crowd-pleasing recipes, and thorough instructions, now you can turn your car into a kitchen without ever crossing any golden arches. Hilarious, bizarre, and ultimately (seriously!) useful, Manifold Destiny is and always will be an unparalleled original. So, slap a ham steak under the hood of your car, hit the gas, and drive until you reach delicious -- which is in approximately fifty miles, depending on traffic.
Air Pollution XXVI
 Performance and racing drivers constantly seek ways to sharpen their skills and lower their lap times. The pages are filled with specially commissioned color diagrams to illustrate the concepts described. Whether you are a track-day novice or a seasoned professional, Ultimate Speed Secrets will arm you with practical information to lower your lap times and help you get the best out of your vehicle—and yourself. It's the ultimate high-performance driving tutorial!

Manifold Destiny

Dealing with issues related to the modelling, monitoring and management of air pollution, this book includes papers presented at the 26th International Conference on Modelling, Monitoring and Management of Air Pollution. The papers from this conference continue a wide ranging collection of high quality research works that develop the fundamental science of air pollution. Air pollution issues remain one of the most challenging problems facing society. The scientific knowledge derived from well-designed studies needs to be allied with further technical and economic studies in order to ensure cost effective and efficient mitigation. Increasingly, it is being recognised that the outcome of such research needs to be contextualised within well formulated communication strategies that help policy makers and citizens to understand and appreciate the risks and rewards arising from air pollution management. Details of the wide spread nature of the air pollution phenomena and in depth explorations of their impacts on human health and the environment are covered in this book.

Feel the Wild is an intimate and powerful story about Nature and our relationship with it, told through stunning photography and thought-provoking writing. To "Feel the Wild" is to connect with the wilderness - the untamed Nature, the untamed Us, the essence of Life, through all of our senses and experience everything it has to offer - the physical, the emotional, the philosophical, and the spiritual. Daniel Fox's book of outdoor photography is ultimately about learning who we are and our place on this planet. It is a journey of growth told through the lenses of humility, vulnerability, and perspective. Published in conjunction with a North American promotional tour sponsored by Arc'teryx (Vancouver, Calgary, Seattle, Portland, Palo Alto, Los Angeles, Denver, New York, Boston, and more), Feel the Wild is certain to infuse everyone with the majesty of the natural world and revive within the reader a deep connection to every living thing.

La historia de la mafia narco que se adueñó de la ciudad de Rosario. En Rosario se respira un clima de guerra. Desde la muerte del líder de Los Monos en 2013, distintas facciones narcos se disputan el negocio de la droga, pero como ninguna prevalece y no se garantiza la paz, la violencia llena las calles de muertos. En la ciudad pasaron cosas que no tienen precedente. Fueron acribillados edificios del poder judicial, casas de jueces y restaurantes ubicados en zonas gastronómicas con gran afluencia de público. Un gerente bancario murió de un tiro en el balcón de un hotel, un gobernador se salvó de milagro cuando atacaron su domicilio. Nunca antes hubo tanta droga para vender, tanto dinero sucio para repartir y tanta gente implicada. Esta transformación tiene detrás una historia compleja y oscura relacionada con un pacto entre las bandas, la policía y el entramado político. Jefes mafiosos que continúan liderando desde la cárcel; grandes cárteles de drogas que disponen libremente de los puertos de la provincia; sicarios dispuestos a matar por poca plata; financieras, mutuales e incluso empresas legales funcionales al lavado del dinero proveniente de estos negocios. Germán de los Santos y Hernán Lascano indagan en decenas de historias para entender cómo se consolidaron los vínculos entre el crimen y el poder; cómo es que en la cárcel hoy vale todo; cómo fue que una de las ciudades más importantes del país se convirtió en un infierno, y cómo hace una sociedad entera para convivir a diario con el horror. Rosario es un libro urgente y necesario, una investigación única a cargo de los dos periodistas que mejor conocen el fenómeno del narcotráfico en esa zona.

This book explains, compares and assesses the legal implications of Dieselgate within a range of selected jurisdictions and at the EU, international and comparative law level. The book analyses the US EPA-VW \$14.7 billion dollar settlement of 2016, one of the largest civil settlements in the history of environmental law. As it shows, the Dieselgate affair has raised a host of issues concerning corporate and social responsibility, tort liability, environmental liability, contractual defective products, warranty, and false environmental claims in a range of jurisdictions. Issues like repurchasing or retrofitting cars from consumers and making direct payments to consumers through car buy-backs and compensation are analysed. Further, the book relates how Dieselgate has also contributed to the discussion about the introduction of more effective collective measures of redress for consumers, such as class actions, in Germany, France, Italy and the UK. The book subsequently reviews the criminal offences Volkswagen is currently confronted with in Germany, France and Italy, i.e. fraud and manipulation of capital markets (by belatedly providing shareholders with essential information relevant for the share value), and, potentially, environmental crimes. It demonstrates how Dieselgate has sparked new debates in Germany, Italy, France and the UK about the need to introduce enterprise liability for organised crimes, lack of compliance and control structures, and intentional violations of the law. Lastly, the book discusses how EU law has sought to respond to Dieselgate and thus investigates the controversial EU Regulation No. 2016/646 introducing a "temporary conformity factor" of 2.1 (equivalent to a 110% increase on the current limit) to be applied for NOx in the new RDE testing cycle, and the works of the EU committee of inquiry into Emissions Measurements in the Automotive Sector (EMIS).

Uzbekistan, long considered the center of Central Asia, has the region's largest population and borders every other regional state including Afghanistan. For the first 25 years of its independence, it adopted a cautious, defensive policy that emphasized sovereignty and treated regional efforts at cooperation with skepticism. But after taking over as President in autumn 2016, Shavkat Mirziyoyev launched a breathtaking series of reform initiatives. His slogan – "it is high time the government serves the people, not vice versa" – led to large-scale reforms in virtually every sector. Time will tell whether the reform effort will succeed, but its first positive fruits are already visible, particularly in a new dynamism within Uzbek society, as well as a fresh approach to foreign relations, where a new spirit of regionalism is taking root. This book is the first systematic effort to analyze Uzbekistan's reforms.

Estacionamentos: diretrizes de projeto e perícias apresenta pela primeira vez um estudo dirigido aos principais aspectos técnicos, normas e regulamentações a serem levados em conta para o projeto de estacionamentos. Área de não raro conflito nos estacionamentos de edifícios, exige para seu projeto otimizado que se considerem, desde as características técnicas dos veículos em circulação até questões não previstas em normas, como espaço de manobra e limitações impostas por elementos construtivos. O livro traz uma visão geral das regulamentações

para o trânsito e circulação de veículos e instruções e normas técnicas brasileiras para estacionamentos, , como também agrega exemplos dos EUA, Portugal e Alemanha. Apresenta uma análise das características da atual frota de veículos no País e de aspectos técnicos não abordados em normas e legislações, e propõe diretrizes de projeto para estacionamentos, que detalham as medidas das vagas e inclinação de rampas, áreas de manobra e faixas de circulação. Uma referência inédita e atual sobre o tema no Brasil, Estacionamentos: diretrizes de projeto e perícias apresenta as diretrizes para projeto de estacionamentos coletivos em edifícios e auxilia peritos de Engenharia e projetistas a interpretar as legislações municipais e compreender os aspectos técnicos mais importantes para um projeto que ofereça comodidade e segurança aos usuários.

This Is Not an Atlas gathers more than 40 counter-cartographies from all over the world. This collection shows how maps are created and transformed as a part of political struggle, for critical research or in art and education: from indigenous territories in the Amazon to the anti-eviction movement in San Francisco; from defending commons in Mexico to mapping refugee camps with balloons in Lebanon; from slums in Nairobi to squats in Berlin; from supporting communities in the Philippines to reporting sexual harassment in Cairo. This Is Not an Atlas seeks to inspire, to document the underrepresented, and to be a useful companion when becoming a counter-cartographer yourself.

This book examines the role of cars and the space connected with their production and presentation in tourism development. It describes the role played by experiences and experience societies formed in the 20th c. in the development of contemporary tourism, including tourism related to cars. The book explores the influence of experiencing unusual events, such as car races, car fairs, visits to car industry museums or multifunctional spaces connected with producing and exhibiting cars (e.g. Autostadt or Audi Forum) on the development of a new type of tourism, i.e. car tourism. This kind of tourism is novel in two ways: firstly, it is a new phenomenon in science, as so far it has not been thoroughly studied or described, apart from various short articles. Secondly, this type of tourism has developed on a large scale only in recent years, mainly due to the huge investments made by powerful European car manufacturers (e.g. Autostadt, Audi Forums, Porsche Museum, Lamborghini Museum

etc.). The book presents cars and the spaces related to them as tourist assets (sites, events) and as tourist products that satisfy tourists' needs. Moreover, it connects the issue of car tourism to the marketing strategies of large car manufacturers and discusses the theory of tourism space, highlighting the main tourism spaces in which car tourism develops. It presents multifunctional spaces (factories, adventure centres – Autostadt in Wolfsburg), museums, car exhibitions, and race tracks. In the next chapter, following an introduction to the problem of events, the author describes events related to car tourism, including races, rallies, driving schools and car fairs. The book ends with a summarizing chapter, which includes a model of the function of car tourism as a separate type of tourism, as well as a discussion

presenting the main features, advantages and disadvantages of car tourism in the context of the tourism space theory.
