A narrative analysis of four main discourses of national identity in Spain, with a special focus on Catalonia, as disseminated in the Spanish press in the period between 1993 and 1996. The study includes assessments of the Spanish press coverage of the 1994 USA Football World Cup, and the process of negotiation towards a pact between Partido Popular and Convergencia I Unio in central government.

Biological sciences have been revolutionized, not only in the way research is conducted -- with the introduction of techniques such as recombinant DNA and digital technology -- but also in how research findings are communicated among professionals and to the public. Yet, the undergraduate programs that train biology researchers remain much the same as they were before these fundamental changes came on the scene. This new volume provides a blueprint for bringing undergraduate biology education up to the speed of todayâ€™s research fast track. It includes recommendations for teaching the next generation of life science investigators, through: Building a strong interdisciplinary curriculum that includes physical science, information technology, and mathematics. Eliminating the administrative and financial barriers to cross-departmental collaboration. Evaluating the impact of medical college admissions testing on undergraduate biology education. Creating early opportunities for independent research. Designing meaningful laboratory experiences into the curriculum. The committee presents a dozen brief case studies of exemplary programs at leading institutions and lists many resources for biology educators. This volume will be important to biology faculty, administrators, practitioners, professional societies, research and education funders, and the biotechnology industry.

In this second edition, Edwin Frankel has updated and extended his now well-known book Lipid oxidation which has come to be regarded as the standard work on the subject since the publication of the first edition seven years previously. His main objective is to develop the background necessary for a better understanding of what factors should be considered, and what methods and lipid systems should be employed, to achieve suitable evaluation and control of lipid oxidation in complex foods and biological systems. The oxidation of unsaturated fatty acids is one of the most fundamental reactions in lipid chemistry. When unsaturated lipids are exposed to air, the complex, volatile oxidation compounds that are formed cause rancidity. This decreases the quality of foods that contain natural lipid components as well as foods in which oils are used as ingredients. Furthermore, products of lipid oxidation have been implicated in many vital biological reactions, and evidence has accumulated to show that free radicals and reactive oxygen species participate in tissue injuries and in degenerative disease. Although there have been many significant advances in this challenging field, many important problems remain unsolved. This second edition of Lipid oxidation follows the example of the first edition in offering a summary of the many unsolved problems that need further research. The need to understand lipid oxidation is greater than ever with the increased interest in long-chain polyunsaturated fatty acids, the reformulation of oils to avoid hydrogenation and trans fatty acids, and the enormous attention given to natural phenolic antioxidants, including flavonoids and other phytochemicals.

Comprehensive Foodomics offers a definitive collection of over 150 articles that provide researchers with innovative answers to crucial questions relating to food quality, safety and its vital and complex links to our health. Topics covered include transcriptomics, proteomics, metabolomics, genomics, green foodomics, epigenetics and noncoding RNA, food safety, food bioactivity and health, food quality and traceability, data treatment and systems biology. Logically structured into 10 focused sections, each article is authored by world leading scientists who cover the whole breadth of Omics and related technologies, including the latest advances and applications. By bringing all this information together in an easily navigable reference, food scientists and nutritionists in both academia and industry will find it the perfect, modern day compendium for frequent reference. Scores of talented and dedicated people serve the forensic science community, performing vitally

important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

This is the first introductory volume to outline the fundamental ecological principles, which provide the foundation for understanding environmental issues. A strong framework of applied ecology is used to explore specifics such as habitat fragmentation, acid deposition, and the emergence of new human diseases.The volume addresses all aspects of biodiversity and physical setting, population and community ecology, ecology and society, environmental legislation and peering into the future.For those interested in pursuing knowledge in ecology and biodiversity.

This book challenges the role of scientists in policy making and the idea of deliberative democracy. The author argues that awareness must increase among both politicians and the citizens who elect them. We must revitalise the decision-making processes in representative democracy. The book proposes new institutional structures.

The Newbery Medal and Coretta Scott King Award-winning classic about a boy who decides to hit the road to find his father—from Christopher Paul Curtis, author of The Watsons Go To Birmingham—1963, a Newbery and Coretta Scott King Honoree. It’s 1936, in Flint Michigan. Times may be hard, and ten-year-old Bud may be a motherless boy on the run, but Bud’s got a few things going for him: 1. He has his own suitcase full of special things. 2. He’s the author of Bud Caldwell’s Rules and Things for Having a Funner Life and Making a Better Liar Out of Yourself. 3. His momma never told him who his father was, but she left a clue: flyers advertising Herman E. Calloway and his famous band, the Dusky Devastators of the Depression!!!!!! Bud’s got an idea that those flyers will lead him to his father. Once he decides to hit the road to find this mystery man, nothing can stop him—not hunger, not fear, not vampires, not even Herman E. Calloway himself. Laboratory experiences as a part of most U.S. high school science curricula have been taken for granted for decades, but they have rarely been carefully examined. What do they contribute to science learning? What can they contribute to science learning? What is the current status of labs in our nationÃ¯Â¿Â½s high schools as a context for learning science? This book looks at a range of questions about how laboratory experiences fit into U.S. high schools: What is effective laboratory teaching? What does research tell us about learning in high school science labs? How should student learning in laboratory experiences be assessed? Do all student have access to laboratory experiences? What changes need to be made to improve laboratory experiences for high school students? How can school organization contribute to effective laboratory teaching? With increased attention to the U.S. education system and student outcomes, no part of the high school curriculum should escape scrutiny. This timely book investigates factors that influence a high school laboratory experience, looking closely at what currently takes place and what the goals of those experiences are and should be. Science educators, school administrators, policy makers, and parents will all benefit from a better understanding of the need for laboratory experiences to be an integral part of the science curriculumÃ¯Â¿Â½and how that can be accomplished.

Prairie Food Chains Wiley-Blackwell

There is a growing crisis in our oceans: mysterious outbreaks of infectious disease are on the rise. Marine epidemics can cause mass die-offs of wildlife from the bottom to the top of food chains, impacting the health of ocean ecosystems as well as lives on land. Portending global environmental disaster, ocean outbreaks are fueled by warming seas, sewage dumping, unregulated aquaculture, and drifting plastic. Ocean Outbreak follows renowned scientist Drew Harvell and her colleagues into the field as they investigate how four iconic marine animals--corals, abalone, salmon, and starfish--have been devastated by disease. Based on over twenty years of research, this firsthand account of the sometimes gradual, sometimes exploding impact of disease on our ocean's biodiversity ends with solutions and a call to action. Only through policy changes and the implementation of innovative solutions from nature can we reduce major outbreaks, save some ocean ecosystems, and protect our fragile environment.

This work is a personal account of the origins and early years of the Salk Institute for Biological Studies. Bourgeois crafts an engaging study that draws on her involvement with the Institute and on related archives, interviews, and informal conversations. The volume discusses the people who founded the Institute and built a home for renowned research—leading scientists of the time as well as non-scientists of stature in finance, politics, philanthropy, publishing, and the humanities. The events that brought people together, the historic backdrop in which they worked, their personalities, their courage and their visions, their clash of egos and their personal vanities are woven together in a rich, engaging narrative about the founding of a world-premier research institution.

Essentials of Ecology presents introductory ecology in an accessible, state–of–the–art format designed to cultivate the novice student’s understanding of, and fascination with, the natural world. In a concise, engaging style, this text outlines the essential principles of ecology from the theoretical fundamentals to their practical applications. Full color artwork, simple pedagogical features and a wide range of timely examples make this book an ideal introduction to ecology for students at all levels. The second edition of this successful text provides expanded coverage and over 400 references including 100 new examples reflecting the vibrancy of the field. More than a simple update, the new edition also features new artwork http://www.blackwellpublishing.com/townsend/Images.htm, an enhanced design, and additional integrated applications to make Essentials of Ecology up–to–date and relevant. Outstanding features of the second edition of Essentials of Ecology include: ∗ Dedicated website – study resources and web research questions provide students and instructors with an enhanced, interactive experience of the book www.blackwellpublishing.com/townsend ∗ Key Concepts – summarized at the beginning of each chapter ∗ Unanswered questions – highlighted throughout, emphasizing that in ecology, as in any science, we have much left to learn ∗ History boxes – outlining key landmarks in the development of ecology ∗ Quantitative boxes – allowing mathematical aspects of ecology to be explained thoroughly without interrupting the flow of the text ∗ Topical ECOncerns boxes – highlighting ethical, social and political questions in ecology ∗ Review questions – included at the end of each chapter
