A thriving and peaceful democracy requires an informed and engaged citizenry, but such citizenship must be learned. Educators around the globe are facing challenges in teaching politics in an era in which populist values are on the rise, authoritarian governance is legitimized, and core democratic tenets

are regularly undermined by leaders and citizens alike. To combat anti-democratic outcomes and citizens' apathy, Teaching Civic Engagement Globally provides a wide range of pedagogical tools to help the current generation learn to effectively navigate debates and lead changes in local, national, and global politics. Contributors discuss key theoretical discussions and challenges regarding global civic engagement education, highlight successful evidence-based pedagogical approaches, and review effective ways to reach across

disciplines and the global education community. Most importantly, the book provides tangible steps to link democratic education research with action that reflects contemporary global circumstances.

One of the major challenges of sustainable development is the interdisciplinary nature of the issues involved. To this end, a team of conservation biologists, hunters, tourist operators, ranchers, wildlife and land managers, ecologists, veterinarians and economists was convened to discuss whether wildlife outside protected areas in Africa can be conserved in the face of agricultural expansion and human

population growth. They reached the unequivocal - if controversial - conclusion that wildlife can be an economic asset, especially in the African savannas, if this wildlife can be sustainably utilized through safari hunting and tourism. Using the African savannas as an example, *Wildlife Conservation by Sustainable Use* shows that in many instances sustainable wildlife utilization comprises an even better form of land use than livestock keeping. Even when population pressure is high, as in agricultural areas or in humid zones, and wild animal species can pose a serious cost to agriculture, these costs are mainly caused by small species with a low potential for safari hunting. Although ranching has a very low rate of return and is hardly ever

profitable, the biggest obstacle to the model of sustainable wildlife use outlined in *Wildlife Conservation by Sustainable Use* is from unfair competition from the agricultural sector, such as subsidies and lack of taxation, resulting in market distortion for wildlife utilization. This book thus gives valuable evidence for a different way of working, providing arguments for removing such distortions and thereby facilitating financially sound land use and making it a rationally sound choice to conserve wildlife outside protected areas. The expert team of authors, most of whom came together at a workshop to thrash out the ideas that were then developed into the various chapters, has written a superb account of recent research on this complex subject, resulting in a book

that is a major contribution to our understanding of sustainable use of land. The important conclusion is that wildlife conservation can be possible for landholders and local communities if they have a financial interest in protecting wildlife on their lands.

The International Code on Intact Stability 2008 (2008 IS Code), presents mandatory and recommendatory stability criteria and other measures for ensuring the safe operation of ships, to minimize the risk to such ships, to the personnel on board and to the environment. The 2008 IS Code took effect on 1 July 2010. The 2008 IS Code features: a full update of the previous IS

Code; criteria based on the best state-of-the-art concepts available at the time they were developed, taking into account sound design and engineering principles and experience gained from operating ships; influences on intact stability such as the dead ship condition, wind on ships with large windage area, rolling characteristics and severe seas. This publication also presents Explanatory Notes to the 2008 IS Code, intended to provide administrations and the shipping industry with specific guidance to assist in the uniform interpretation and application of the intact stability requirements of the 2008 IS Code.

between gender, race, narrative, and nationalism in black politics specifically within American politics as a whole. The author not only highlights the critical role of race and gender, she goes further to show how they operate to define political discourse and to determine public policy.

“The Knowledge Illusion is filled with insights on how we should deal with our individual ignorance and collective wisdom.” —Steven Pinker We all think we know more than we actually do. Humans have built hugely complex societies and technologies, but most of us don’t even know how a pen or a toilet works. How have we achieved so much despite understanding so little?

Cognitive scientists Steven Sloman and Philip Fernbach argue that we survive and thrive despite our mental shortcomings because we live in a rich community of knowledge. The key to our intelligence lies in the people and things around us. We’re constantly drawing on

information and expertise stored outside our heads: in our bodies, our environment, our possessions, and the community with which we interact—and usually we don’t even realize we’re doing it. The human mind is both brilliant and pathetic. We have mastered fire, created democratic institutions, stood on the moon, and sequenced our genome. And yet each of us is error prone, sometimes irrational, and often ignorant. The fundamentally communal nature of intelligence and knowledge explains why we often assume we know more than we really do, why political opinions and false beliefs are so hard to change, and why individual-oriented approaches to education and management frequently fail. But our collaborative minds also enable us to do amazing things. The

Knowledge Illusion contends that true genius can be found in the ways we create intelligence using the community around us.

Marine Auxiliary Machinery, Seventh Edition is a 16-chapter text that covers the significant advances in marine auxiliary machinery relevant to the certification of competency examinations. The introductory chapters deal with the basic components of marine machineries, such as propulsion system, heat exchanger, valves, and pipelines. The succeeding chapters describe the pumps and pumping system, specifically the tanker and gas carrier cargo pumps. Considerable chapters are devoted to the operation of

machinery's major components, including the propeller shaft, steering gear, auxiliary power, bow thrusters, and stabilizers. Other chapters consider the refrigeration, heating, ventilation, and air conditioning systems. The final chapters tackle the safety system of marine auxiliary machinery, particularly the fire protection, safety, instrumentation, and control systems. This book will prove useful to marine and mechanical engineers.

Food safety awareness is at an all time high, new and emerging threats to the food supply are being recognized, and consumers are eating more and more meals prepared outside of the home. Accordingly, retail and foodservice

establishments, as well as food producers at all levels of the food production chain, have a growing responsibility to ensure that proper food safety and sanitation practices are followed, thereby, safeguarding the health of their guests and customers. Achieving food safety success in this changing environment requires going beyond traditional training, testing, and inspectional approaches to managing risks. It requires a better understanding of organizational culture and the human dimensions of food safety. To improve the food safety performance of a retail or foodservice establishment, an organization with thousands of employees, or a local community, you must change the way people do things. You must change their behavior. In fact,

simply put, food safety equals behavior. When viewed from these lenses, one of the most common contributing causes of food borne disease is unsafe behavior (such as improper hand washing, cross-contamination, or undercooking food). Thus, to improve food safety, we need to better integrate food science with behavioral science and use a systems-based approach to managing food safety risk. The importance of organizational culture, human behavior, and systems thinking is well documented in the occupational safety and health fields. However, significant contributions to the scientific literature on these topics are noticeably absent in the field of food safety.

The technology used to ripen bananas is affected by a wide range of factors, including the cultivar, growing conditions, harvesting method, and maturity at which the fruit are harvested and handled. Various post harvest treatments applied to fruit can also impact ripening. While many textbooks have been dedicated to *Musa* (bananas and plantains), none have focused exclusively on the ripening process. The commercial ripening of bananas and the chemical changes that occur thereby are considered here in detail. In developed, temperate countries where bananas are imported, successful ripening technologies have evolved. Most bananas, however, are marketed locally

in the country where they are grown, and often the ripening technologies used have economic and health implications. This brief offers an in-depth discussion of not only the implications of these technologies, but also of alternative ripening methods and their commercial applications. For an understanding of both the chemical basis by which bananas ripen and the technologies used to control the process, look no further than this essential text.

Within the marine and offshore industry, there is a clear and growing need for increased training and education on the use of electrical power systems. The number of electrical plant and appliances now in service has grown at

an alarming rate in recent years, as has the amount of electrical power generated and utilised on board. Large passenger ships now carry as many electrical officers as marine engineers, and electrical propulsion is now in common use by LNG carriers, small parcel tankers, oil tankers, ferries, offshore support, the navy, fleet auxiliary, cable layers and cruise ships. A number of shipping companies now award the Chief Electro Technical Officer the equivalent rank to the ship's master and Chief Engineer. These developments have resulted in the establishment of a Foundation Degree programme for Electro Technical Officers and the current development of full degree programmes. As such, a targeted textbook for students on the subject is

required. As with all titles in the Reeds Marine Engineering Series, this book will be written in clear, accessible language, so as to be of use to all students and particularly those for whom English isn't their first language. Technical drawings and diagrams will be used throughout and each chapter will be accompanied by example examination questions. The Architecture of Public Truth Springer "In search of a path, An analysis of the foreign policy of Suriname from 1975 to 1991, Roger Janssen The foreign policy of small states is an often neglected topic, which is particularly the case when it comes to Suriname. How did the young Republic deal with its dependency on the Netherlands for development aid after 1975? Was Paramaribo following a certain foreign policy strategy or did it

merely react towards internal and external events? What were the decision making processes in defining the foreign policy course and who was involved in these processes? And why was a proposal discussed to hand back the right of an independent foreign and defence policy to a Dutch Commonwealth government in the early 1990s? These questions are examined here in depth, in the first comprehensive analysis of Suriname's foreign policy from 1975 to 1991. The book provides readers interested in Caribbean and Latin American affairs with a detailed account of Suriname's external relations. Moreover, the young Republic may stand as a case study, as it confronted the difficulties and challenges that small developing states often face. Roger

Janssen (1967), born in the Dutch-German border region of Cleve, migrated to Australia in 1989. He received his education as a historian at the University of Western Australia where he obtained a Ph.D. in 1999. During his graduate and post-graduate studies, the main focus of his research was directed towards the social-economic and political developments of the Dutch Caribbean after the Second World War. Currently he lives and works in the Netherlands"--

The International Corporate 1000 represents a joint venture between Monitor Publishing Company of Washington, DC, and Graham & Trotman Limited of London. Monitor Publishing Company is well known as the publisher of The Federal Yellow Book, The Congressional Yellow Book, and The Corporate 1000. Graham & Trotman's annual directories providing data on the major companies in many parts of the world are equally established. The two publishing companies have pooled their expertise in this joint venture to research, compile and publish The International Corporate 1000, A Directory of Who Runs The World's 1000 Leading Corporations. The directory was designed to help you identify and contact the senior executives who lead

and manage these companies. Accordingly, you will find extensive, valuable detail about who does what, and how to reach them, but you will find little financial or statistical data. We have designed the book in this way because we believe there is a great need for an accurate and current executive directory, whereas a wealth of financial data is already available from many different sources. The organization of the directory is by key geographical region, then by major country within each region, and then alphabetically by company within each country. *Reeds Vol 16: Electrical Power Systems for Marine Engineers* Routledge The Code of Safe Practice for Cargo Stowage and Securing (CSS Code) provides an international standard for

the safe stowage and securing of cargoes to promote the safety of life both at sea, and during loading and discharge. The 2021 edition incorporates all amendments up to and including 2020. In particular, this edition includes amendments to annex 13 on Methods to assess the efficiency of securing arrangements for semi-standardized and non-standardized cargo (MSC.1/Circ.1623), appendix 2 on Revised guidelines for the preparation of the Cargo Securing Manual (MSC.1/Circ.1353/Rev.2) and appendix 4 on Revised guidelines for securing arrangements for the transport of road vehicles on ro-ro ships (MSC.479(102)), which supersedes resolution A.581(14), as amended. Also included in this 2021 edition of the Code are amendments to

Previously published as Kemp & Young's Cargo Work, this new edition has been fully revised and expanded to comprehensively reflect unit load containerised systems that are now used in the majority of cargo shipping, while retaining the necessary detail on transporting key classes of cargoes safely, efficiently and profitably. This is an essential reference for merchant seamen internationally. The book covers general principles and the latest international regulations that affect all cargo work, including cargo types and key characteristics of a wide range of

cargo classes. It also details Roll On - Roll Off cargo handling, containerisation, equipment and offshore supply.

This book, part of a series, seeks to re-conceptualize Asian geographies; rather than a static East Asia core, this volume analyzes Asia's southern fringe, as symbolized in the trading group ASEAN and its role in Asia's evolving international relations. The contributors include many leading experts in the field, ensuring that this book will be the go-to text for students, scholars, and civil society decision makers exploring Asia's contemporary political spectrum in real time.

Warehouses are an integral link in the modern supply chain, ensuring that the correct product is delivered in the right quantity, in good condition, at the required time, and at minimal cost: in effect, the perfect order. The effective management of warehouses is vital in minimizing costs and ensuring the efficient operation of any supply chain. Warehouse Management is a complete guide to best practice in warehouse operations. Covering everything from the latest technological advances to current environmental issues, this book provides an indispensable companion to the modern warehouse. Supported by case studies, the text considers many aspects of warehouse management, including: cost reduction productivity

people management warehouse operations With helpful tools, hints and up-to-date information, Warehouse Management provides an invaluable resource for anyone looking to reduce costs and boost productivity.

#### Wildlife Conservation by Sustainable Use Information Today

A number of well-developed theories shed light on the question, under what circumstances our beliefs enjoy epistemic justification. Yet, comparatively little is known about epistemic defeat—when new information causes the loss of epistemic justification. This book proposes and defends a detailed account of epistemic defeaters. The main kinds of defeaters are analyzed in detail and integrated into a general framework that aims to explain

how beliefs lose justification. It is argued that defeaters introduce incompatibilities into a noetic system and thereby prompt a structured re-evaluation process that makes a justified reinstatement of the defeated belief impossible. The account is then applied to the topic of disagreement, where it is used in an argument for conciliationism, as well as a new explanation for higher-order defeat. Throughout the book, the notion of defeat is the center of attention, while a number of new issues are discussed at the intersections of defeat and justification. Specifically, new problems are raised for broadly internalist accounts of defeat, a fully descriptive reliabilist account of defeat is provided, and the case for normative defeat is revisited.

Spreading a culture of tolerance and peace is necessary to address contemporary issues of world peace, this includes reflection on the importance of refusing violence and adopting a more peaceful means for resolving disagreements and conflicts. This book, written by the world's foremost thinkers in this area, aims to increase feelings of openness and respect toward others, solidarity and sharing based on a sense of security in one's own identity and a capacity to recognize the many dimensions of being human in different cultural and social contexts.

Teaching Civic Engagement provides an exploration of key theoretical discussions, innovative ideas, and best practices in educating citizens in the 21st century. The book addresses theoretical debates over the place of civic engagement education in Political Science. It offers pedagogical examples in several sub-fields, including evidence of their effectiveness and models of appropriate assessment. Written by political scientists from a range of institutions and subfields, Teaching Civic Engagement makes the case that civic and political engagement should be a central part of our mission as a discipline.
