The lonesome-cowboy title track is performed by the low-voiced moody rocker Mark Lanegan (yes, of Queens of the Stone Age.) "This celebration of differences displays great respect for readers' intelligence and yields more with each reading. —Kirkus Reviews (starred review) Two shy kids discover the power of friendship in this charming picture book that celebrates being different. A boy likes to dress as a cat, but his best friend's dog objects. What will he dress as now? A giraffe? A fox? A shark? When his best friend, Camille, suggests a frog, they work together to make the frog costume...until Camille runs out of patience. So the boy makes a list of the pros and cons of being a frog: Pros: 1. My friend Camille gave me the idea 2. I'm less likely to be chased by a dog 3. Being in a frog costume makes me feel brave Cons: 1. Not everyone loves wearing a frog costume as much as me 2. If you start getting bossy about your frog costume then your friend will get up and leave 3. A frog is NOT a solitary creature so it is no fun for a frog if his friend gets up and leaves Luckily, he won't have to choose, because true friendship means accepting each other's differences: he can be himself and have his friend Camille.

ONE OF THE NEW YORK TIMES BOOK REVIEW'S 10 BEST BOOKS OF THE YEAR A major book about the future of the world, blending intellectual and natural history and field reporting into a powerful account of the mass extinction unfolding before our eyes Over the last half a billion years, there have been five mass extinctions, when the diversity of life on earth suddenly and dramatically contracted. Scientists around the world are currently monitoring the sixth extinction, predicted to be the most devastating extinction event since the asteroid impact that wiped out the dinosaurs. This time around, the cataclysm is us. In *The Sixth Extinction*, two-time winner of the National Magazine Award and New Yorker writer Elizabeth Kolbert draws on the work of scores of researchers in half a dozen disciplines, accompanying many of them into the field: geologists who study deep ocean cores, botanists who follow the tree line as it climbs up the Andes, marine biologists who dive off the Great Barrier Reef. She introduces us to a dozen species, some already gone, others facing extinction, including the Panamanian golden frog, staghorn coral, the great auk, and the Sumatran rhino. Through these stories, Kolbert provides a moving account of the disappearances occurring all around us and traces the evolution of extinction as concept, from its first articulation by Georges Cuvier in revolutionary Paris up through the present day. The sixth extinction is likely to be mankind's most lasting legacy; as Kolbert observes, it compels us to rethink the fundamental question of what it means to be human.
