**Econometric Analysis  
of Regional Systems**

Springer Science &  
Business Media  
Targeting regional  
economic development  
(TRED) has a long and  
rich tradition among  
academic economists and  
in the world of economic

development  
practitioners. This book  
builds on a series of  
workshops and papers  
organized by The  
Northeast Regional Center  
for Rural Development  
(NERCRD) at the

Pennsylvania State University and the Rural Policy Research Centre (RUPRI) at the University of Missouri. Through the coordinated efforts of NERCARD and RUPRI, a network of university based researchers and Extension education specialists was developed and provides the foundation of this new edited volume. For the first time in a single book, Goetz, Deller and Harris present an innovative approach through a collection of chapters discussing industry

targeting and the relevance of TRED as an important analytical tool for practical targeting purposes. The papers present issues surrounding community economic development, clusters in industry and rural communities and the role of agglomeration economies. The book provides the reader with insights into not only the theoretical foundations of targeting as well as empirical methods, but also approaches for using the community-level analysis to affect policy

directions.

### **Second Edition**

Routledge

Economic development and the environment are presumed to be in conflict, but the latter part of the twentieth century experienced a series of economic changes that increasingly questioned this view. Economic activity became more footloose and the ability to attract productive labor became a prominent regional development concern. Consequently, environmental amenities began to have a larger

role in determining the patterns of regional growth and development, and subsequently moved to the forefront of current regional economic development thought and practice. Environmental amenities provide non-pecuniary benefits to area residents, and induce in-migration flows to regions that possess high levels of environmental amenities. The attraction is particularly strong for those individuals with higher incomes and wealth. The combined forces of increased

demand for environmental amenities and increased spatial flexibility of production has brought environmental amenities to the forefront of current regional economic development thought and practice. Regional economic development policy needs to consider the tradeoffs of attracting firms or people, which requires an understanding of the role the environment plays directly or indirectly in attracting firms and households. This book

presents key papers that explore the role of the natural environment in regional economic development. The papers contain critical insights and information for both researchers and practitioners interested in the nexus between environmental amenities and regional economic growth and development. The book covers varied dimensions of this issue, including: the relative importance of amenities in recent variation in regional growth; the role of local infrastructure in

promoting amenity-led development; socio-economic distribution concerns and sustainability of amenity-based growth; and the effects of local environmentally protected areas on other economic activities. This book will be of most value to practitioners and academics, specifically related to the areas of environmental economics, regional economic development, local and regional planning, public administration and public policy.

*Understanding Local Economic Development*  
Springer

This third edition of Job Creation and Local Economic Development examines the impact of technological progress on regional and local labour markets. It sheds light on widening regional gaps on job creation, workers education and skills, as well as inclusion in local economies.

**Using Analysis to Guide Local Strategic Planning** Routledge

"This book reviews theories of local economic

development and shows how each theory informs real-world policy and practice. The authors lay out the basic assumptions, concepts, and implications of the most important theories of economic growth and go on to explain how each theory or approach translates into a strategy for economic development. Students and practitioners alike will be able to recognize the policy implications of alternative theories of local economic development." --Book

Jacket.

*Regional Economic Development* Routledge

This new edition updates and expands the author's classic work, which has become a standard for professionals and students of public administration, urban and regional planning, and regional economics.

Bendavid-Val provides a comprehensive practitioner-oriented book on the state of the art of regional and local economic planning, written in a straightforward style that

requires no extensive background. Included are thorough discussions of planning methods, covering aggregate regional analysis, intraregional analysis, and project identification and evaluation, as well as approaches to development planning.

An Analysis and Evaluation of Economic Activity of Kenwood, Ohio  
Routledge

Originally published in 1987, *Cost-Benefit Analysis in Urban and Regional Planning*, outlines the theory and

practice of cost-benefit analysis (CBA) in the context of urban and regional planning. The theory of CBA is developed with examples to illustrate the principles, it also deals with details of the applications and covers issues such as local health and social services provision, local economic development and regional policy evaluation, and planning in less developed countries - as well as the conventional land-use issues of physical planning.

**Methods For Identifying Local Import Substitution Opportunities To Foster Sustainable Regional Economies**

Routledge

This is a relatively simple and easy to read introduction of major regional and local economic development theories, their theoretical evolution and other relevant topics such as governance, institutions and local leadership within the globalization context. It also discusses some basic analytical

tools and provides a template for them in an easy to use MS Excel spreadsheet application. It introduces conflict management procedures into regional development process and provides a regional decision support framework.

*Local and Regional Indicators of Suburban Growth* Edward Elgar Publishing

Provides the regional economic developer with an overview of the sources of data for measuring the health and structure of local

economies. Includes evaluation of print material and web sites as well as agencies and organizations as sources for socio-economic data.

**Planning Local Economic Development**

Routledge

Residential Real Estate introduces readers to the economic fundamentals and emerging issues in housing markets. The

book investigates housing market issues within local, regional, national and international contexts in order to provide students with an understanding of the economic principles that underpin residential property markets. Key topics covered include: Location choice in urban areas Housing supply and demand Housing finance and housing as an asset class Demographic shifts and implications for housing Sustainable homes and digitalisation in housing Drawing on market-level information,

readers are encouraged to recognise the supply and demand drivers and modelling of dynamic housing markets at various spatial scales and the implications of trends within an urban and regional context, e.g. urbanisation, ageing population, migration, digitalisation. With research-based discussions and coverage of relevant literature, this is an ideal textbook for students of residential real estate, property and related business studies courses at UG and PG

levels, as well as a reference book with research topics for researchers. This book will also be of interest to professionals and policymakers. Explorations in Model Building and Policy Analysis Oxford University Press, USA Forward-looking communities have attained a competitive edge by strengthening clusters of related and supporting industries, not courting individual firms. How will your community know which clusters to

strengthen as it negotiates this fundamental shift in development strategy? This book shows you how to conduct local economic analysis to support such strategic planning decisions. You'll learn how to use basic economic analysis techniques to analyze changes in the local economy and evaluate the significance of these changes for economic development policy. They show how to structure an analysis; assess local economic performance; analyze the

structure and dynamics of a local economy; evaluate local growth prospects; assess local human resources; evaluate nonlabor resources; and link analysis to strategic planning. Understanding Your Economy also includes a summary of data series and sources that will trim hours from your search for information necessary to conduct your analysis. Understanding Your Economy does not assume an extensive background in statistics or data management. It can

serve as a stand-alone manual for anyone who wants to learn more about the functions and dynamics of an area's economy. It's also designed to serve as a text for a two-day seminar. It suggests a format for presenting the materials and includes chapter summaries of key concepts as well as a guide to supplemental resources that will help instructors develop a successful workshop. Must-reading for all planners dealing with economic development. It

is also an appropriate text for undergraduate, graduate, and professional courses in economics, public policy, and urban planning.

**An Economic Analysis of Local and Regional Impacts of Reduction of Military Expenditures**

Routledge  
This book is about the analysis of regional economic performance and change, and how analysis integrates with strategies for local and regional economic development policy and planning. The book is not

about the theory of regional economic development, although it provides the reader with an overview of key theoretical and conceptual contexts within which the economic development process takes place. Rather, the deliberate emphasis is to provide the reader with an account of quantitative and qualitative approaches to regional economic analysis and of old and new strategic frameworks for formulating regional economic development

planning. This is done within the context of the evolution of society from the industrial to the post-industrial era in which contemporary forces of globalization and economic restructuring are creating increasing interdependence, rapid change, and high levels of uncertainty and risk for regions at all levels of scale.

*Policy Implications of Dynamic Externalities* RTI Press

Innovation districts are physical spaces that serve to strengthen the

foundations and institutions of an innovation ecosystem. The design, implementation, and management of formalized innovation districts is a new practice area. Research draws upon the experience of concentrated areas of innovation that occurred organically, such as Boston's Route 128, as well as intentional projects to bring together innovators in large science and technology parks, such as North Carolina's Research

Triangle Park. Existing research focuses on how to define and design innovation districts and evaluate their impact, as well as general policy considerations. In this paper, we review the definitions and benefits of an innovation district, reviewing the existing empirical research on their impacts. We then propose a series of questions to guide practitioners in addressing the economic, physical, social, and governance elements of an innovation district.

Finally, we outline some of the challenges in creating an innovation district and ways to measure progress, to allow practitioners to get ahead of potential issues in the future. This paper is intended to help policymakers and practitioners working in innovation and economic development translate the concepts of innovation ecosystems into actionable next steps for planning innovation districts in their communities.

### **The Political Economy**

**of Sub-National  
Economic Development**

OECD Publishing

This textbook is concerned with economic development at the local, community or regional scale. Its aim is to provide students with a comprehensive introduction to contemporary thinking about locally based economic development, how growth can be planned and how that development can be realized. This book: • Provides students with a thorough understanding

of current debates around local and regional development and how that body of work can assist them in helping communities grow; • Equips students with a 'toolkit' of strategies that enable them to both plan for development and deliver that development through their professional lives; • Offers a roadmap for economic development that helps students make sense of place-based development by providing a 'meta narrative' of how regions grow and how those

processes can be enhanced. This integrating perspective will be organized around the concept of competitiveness and how that concept can be understood and operationalized in various ways; • Aims to improve the performance of economic development agencies by providing current and future staff with a better set of strategies that are more appropriate to their needs; • Socializes students into the world of economic development

planning, providing them with an entry point into a rewarding career; • Introduces students to a range of techniques essential to success in economic development planning. In addition to a wealth of case studies and pedagogical features, the book is also complemented by online resources. In offering a full toolkit of economic development knowledge, techniques and strategies, this text will thoroughly prepare students for a career in urban planning, transport planning,

human geography, applied economic analysis, geographic information systems, and/or work as an economic development practitioner. Analysis and Planning Strategy Routledge Actors and institutions in localities and regions across the world are seeking prosperity and well-being amidst tumultuous and disruptive shifts and transitions generated by: an increasingly globalised, knowledge-intensive capitalism; global

financial instability, volatility and crisis; concerns about economic, social and ecological sustainability, climate change and resource shortages; new multi-actor and multi-level systems of government and governance and a re-ordering of the international political economy; state austerity and retrenchment; and, new and reformed approaches to intervention, policy and institutions for local and regional development. Local and Regional

Development provides an accessible, critical and integrated examination of local and regional development theory, institutions and policy in this changing context. Amidst its rising importance, the book addresses the fundamental issues of 'what kind of local and regional development and for whom?', its purposes, principles and values, frameworks of understanding, approaches and interventions, and integrated approaches to

local and regional development throughout the world. The approach provides a theoretically informed, critical analysis of contemporary local and regional development in an international and multi-disciplinary context, grounded in concrete empirical analysis from experiences in the global North and South. It concludes by identifying what might constitute holistic, inclusive, progressive and sustainable local and regional development, and reflecting upon its

limits and political renewal.

*Targeting Regional Economic Development*  
Routledge

This publication highlights the impact of culture on local economies and the methodological issues related to its identification.

**Preparing for the Future of Work**

Routledge

The completely reedited second edition of this book reflects recent advances and adds insightful new material. The book analyzes

regional economic performance and change, and discusses how analysis integrates with strategies for local and regional economic development policy and planning. The aim is to provide the reader with an account of quantitative and qualitative approaches to regional economic analysis, and of old and new strategic frameworks for formulating regional economic development planning.

Regional Economic Development Routledge

Innovation has been shown to be a key factor in determining a country's competitiveness and economic growth potential. Through investments in education and research and development, many developing countries have tried to avoid the "middle income trap" of stagnation by working to create high-value employment opportunities. To better understand country-level readiness to innovate, we have compiled a set of publicly available data

indicators and created a data tool to illustrate innovation capabilities and infrastructure by country. Our approach builds on and advances existing national innovation metrics by constructing transparent, publicly sourced indicators that emphasize changes over time and interrelationships between different indicators, as opposed to creating simple indices across groups of indicators. This occasional paper is targeted to an applied audience,

explaining the methods used to assemble the data, an overview of the indicators, practical applications of the data, summary statistics, and data limitations. The data are not intended to be a tool for providing answers about innovation, but rather a starting point for future work including market landscaping, country-level diagnostics, and qualitative protocols for research.

Regional Economics W E Upjohn Inst for  
This title was first published in 2003. Korea

has had considerable success in developing its high technology industries and these have become significant employers in this region. By analysing the situation in Korea, this book explores the effects of dynamic externalities on the growth of regional employment in the high-technology industries. It puts forward innovative simultaneous equation models to test three sets of hypotheses related to so-called 'Jacobs', and 'MAR' effects, differentiated by firm size, organizational type and

product. Clear evidence is found for endogenous technological progress marked by positive feedback, especially for small firms in diversified high-technology enclaves. There are technological externalities associated with knowledge spillovers, and local employment has indirect effects on employment growth via dynamic externalities. The implications for local economic development policy are outlined in a concluding section. - *Patterns of Regional Economic Change*

<p>Routledge Regional Input-Output Analysis applies standard macroeconomic accounting principles to geographic and regional</p>	<p>studies. Hewings develops an analytic framework and constructs regional input-output models. He then expands the model to consider interaction between regions. He links</p>	<p>the model to linear programming and demographic models to provide a more sophisticated representation of reality.</p>
