Statistics in Psychology covers all statistical methods needed in education and research in psychology. This book looks at research questions when planning data sampling, that is to design the intended study and to calculate the sample sizes in advance. In other words, no analysis applies if the minimum size is not determined in order to fulfil certain precision requirements. The book looks at the process of empirical research into the following seven stages: Formulation of the problem Stipulation of the precision requirements Selecting the statistical model for the planning and analysis The (optimal) design of the experiment or

survey Performing the experiment or the survey Statistical analysis of the observed results Interpretation of the results.

This volume positions itself on the cutting edge of two fields in psychology that enjoy rapidly increasing attention: both the study of human lives and some core domains of such lives as religion and spirituality are high on the agenda of current research and teaching. Biographies and autobiographies are being approached in new ways and have become central to the study of human lives as an object of research and a preferred method for obtaining unique data about subjective human experiences. Ever since the beginning of the psychology of religion, autobiographies have also been pointed out as an important source of information about psychic processes involved in religiosity. In this volume, a number of leading theoreticians and researchers from Europe and the USA try to bring them back to this field by drawing on new insights and latest developments in psychological theory.

Jana Hensel was thirteen on November 9, 1989, the night the Berlin Wall fell. In all the euphoria over German reunification, no one stopped to think what it would mean for Jana and her generation of East Germans. These were the kids of the seventies, who had grown up in the shadow of Communism with all its hokey comforts: the Young Pioneer youth groups, the cheerful Communist propaganda, and the comforting knowledge that they lived in a Germany unblemished by an ugly Nazi past and a callous capitalist future. Suddenly everything was gone. East Germany disappeared, swallowed up by the West, and in its place was everything Jana and her friends had coveted for so

long: designer clothes, pop CDs, Hollywood movies, supermarkets, magazines. They snapped up every possible Western product and mannerism. They changed the way they talked, the way they walked, what they read, where they went. They cut off from their parents. They took English lessons, and opened bank accounts. Fifteen years later, they all have the right haircuts and drive the right cars, but who are they? Where are they going? In *After the Wall*, Jana Hensel tells the story of her confused generation of East Germans, who were forced to abandon their past and feel their way through a foreign landscape to an uncertain future. Now as they look back, they wonder whether the oppressive, yet comforting life of their childhood wasn't so bad after all.

Band 1 widmet sich den „Grundlagen des Strafrechts“ aus rechtsphilosophischer, rechtssoziologischer und geistesgeschichtlicher Sicht. Auch verfassungsrechtliche Vorgaben, Fragen der juristischen Methodenlehre und neue dogmatische Herausforderungen werden eingehend diskutiert. Zur Klärung der empirischen Grundlagen sind Kriminologie und Kriminalstatistik prominent vertreten. Den bestehenden Entwicklungen des deutschen Strafrechts wird ebenso Rechnung getragen wie neueren Diskussionsfeldern, z.B. der strafrechtlichen Compliance und der zunehmenden Interkulturalität. Konzeption: Das auf neun Bände angelegte „Handbuch des Strafrechts“ ist eine Gesamtdarstellung des deutschen Strafrechts und Strafverfahrensrechts, das nicht über Kommentierungen einzelner Vorschriften, sondern in Form themenspezifischer Abhandlungen erschlossen wird. Es besteht aus drei Sektionen, von denen die erste die Grundlagen sowie den Allgemeinen Teil des Strafrechts behandelt, die zweite den Besonderen Teil mit ausgesuchten Teildisziplinen des Strafrechts und die dritte das Strafverfahrensrecht. Das Handbuch des Strafrechts stellt dezidiert die Dogmatik in den Mittelpunkt. Es berücksichtigt vor allem die Grundlagen und deren Fortentwicklung. Losgelöst von den Herausforderungen des

Augenblicks und des Einzelfalls begleitet es die Entwicklung des deutschen Strafrechts beständig und dauerhaft aus einer kritischen Distanz. Es trägt dazu bei, andere strafrechtswissenschaftliche Untersuchungen auf ein solides Fundament zu stellen. Aufgrund von Interdisziplinarität und Einbeziehung europäischer und internationaler Tendenzen ist das Werk über die nationalen Grenzen hinaus für die gesamte strafrechtliche Forschung und Praxis von Interesse.

The book “Do it with Zen” is a practical guide with direct relevance to everyday life. Selected quotes and stories from Asia bridge the gap between Eastern wisdom and Western lifestyle. The author points out the basic principles of Zen teachings and transfers them to people's habits – the world of work, family, and everyday life are the focus of observation. The methods, which are additionally presented as exercises, can be summarised as consciousness techniques. Successfully applied, they can have a preventative effect against stress. With mental strength we can rise to crises and changes; some tools associated with this can be trained in a simple way! This book captivates through its simplicity and the selection of practice-oriented thoughts. The author has a professional medical-therapeutic background, so that the Western health teachings are supplemented with useful practices in a meaningful and consistent way. The book “Do it with Zen” contains effective suggestions for coping with stress and illustrates the way our brain works. A compact guidebook with Far Eastern ways of thinking and practical everyday examples, written in a way that everyone can understand. Each

chapter contains exercises to train successful stress management. Improve your mindfulness through meditation and reflection. Successful training for mental strength and resilience. Buddhist way of thinking for a stress-free life and a better work-life balance. Connecting Zen wisdom and everyday life. Self-coaching book for better perception and awareness. This work addresses potentially occurring unintended flows of personally identifiable information (PII) within two fields of research, i.e., enterprise identity management and online social networks. For that, we investigate which pieces of PII can how often be gathered, correlated, or even be inferred by third parties that are not intended to get access to the specific pieces of PII. Furthermore, we introduce technical measures and concepts to avoid unintended flows of PII.

The definitive firsthand account of the groundbreaking research of Philip Zimbardo—the basis for the award-winning film *The Stanford Prison Experiment*. Renowned social psychologist and creator of the Stanford Prison Experiment, Philip Zimbardo explores the mechanisms that make good people do bad things, how moral people can be seduced into acting immorally, and what this says about the line separating good from evil. *The Lucifer Effect* explains how—and the myriad reasons why—we are all susceptible to the lure of “the dark side.” Drawing on examples from history as well as his own trailblazing research, Zimbardo details how situational forces and group dynamics can work in concert to make monsters out of decent men and women. Here, for the first time and in detail, Zimbardo tells the full story of the Stanford Prison Experiment, the landmark study in which a group of college-student volunteers was randomly divided into “guards” and “inmates” and then placed in a mock prison environment. Within a week the study was abandoned, as ordinary college students were transformed into either brutal, sadistic guards or emotionally broken prisoners. By illuminating the psychological causes behind such disturbing metamorphoses, Zimbardo enables us to better understand a variety of harrowing phenomena, from corporate malfeasance to organized genocide to how once upstanding American soldiers came to abuse and

torture Iraqi detainees in Abu Ghraib. He replaces the long-held notion of the “bad apple” with that of the “bad barrel”—the idea that the social setting and the system contaminate the individual, rather than the other way around. This is a book that dares to hold a mirror up to mankind, showing us that we might not be who we think we are. While forcing us to reexamine what we are capable of doing when caught up in the crucible of behavioral dynamics, though, Zimbardo also offers hope. We are capable of resisting evil, he argues, and can even teach ourselves to act heroically. Like Hannah Arendt’s *Eichmann in Jerusalem* and Steven Pinker’s *The Blank Slate*, *The Lucifer Effect* is a shocking, engrossing study that will change the way we view human behavior. Praise for *The Lucifer Effect*: “*The Lucifer Effect* will change forever the way you think about why we behave the way we do—and, in particular, about the human potential for evil. This is a disturbing book, but one that has never been more necessary.”—Malcolm Gladwell “An important book . . . All politicians and social commentators . . . should read this.”—*The Times* (London) “Powerful . . . an extraordinarily valuable addition to the literature of the psychology of violence or ‘evil.’”—*The American Prospect* “Penetrating . . . Combining a dense but readable and often engrossing exposition of social psychology research with an impassioned moral seriousness, Zimbardo challenges readers to look beyond glib denunciations of evil-doers and ponder our collective responsibility for the world’s ills.”—*Publishers Weekly* “A sprawling discussion . . . Zimbardo couples a thorough narrative of the Stanford Prison Experiment with an analysis of the social dynamics of the Abu Ghraib prison in Iraq.”—*Booklist* “Zimbardo bottled evil in a laboratory. The

lessons he learned show us our dark nature but also fill us with hope if we heed their counsel. The Lucifer Effect reads like a novel.”—Anthony Pratkanis, Ph.D., professor emeritus of psychology, University of California

How does creativity evolve in mind? This question leads a journey through neuroanatomical understanding and cognitive models. It thereby helps to figure out new approaches in decoding the process of creativity. These “aspects of the new” provide better understanding and constitute future research and insight of cognitive activities and creativity.

Puberty is a time of tumultuous transition from childhood to adulthood activated by rapid physical changes, hormonal development and explosive activity of neurons. This book explores puberty through the parent-teenager relationship, as a "normal state of crisis", lasting several years and with the teenager oscillating between childlike tendencies and their desire to become an adult. The more parents succeed in recognizing and experiencing these new challenges as an integral, ineluctable emotional transformative process, the more they can allow their children to become independent. In addition, parents who can also see this crisis as a chance for their own further development will be ultimately enriched by this painful process. They can face up to their own aging as they take leave of youth with its myriad possibilities, accepting and working through a newfound rivalry with their sexually mature children, thus experiencing a process of maturity, which in turn can set an example for their children. This book is based on rich clinical observations from international

settings, unique within the field, and there is an emphasis placed by the author on the role of the body in self-awareness, identity crises and gender construction. It will be of great interest to psychoanalysts, psychotherapists, parents and carers, as well as all those interacting with adolescents in self, family and society.

The Lucifer Effect Springer

Description From age 17 German young men, no matter if they enlist or are conscripted to serve their country, are legally obliged to subject themselves to repeated, humiliating medical examinations carried out mainly by female staff. Military regulations and old perverted habits demand they strip, present testicles, pull foreskin back, turn, bend forward and spread their buttocks for inspection. What once was seen as a suitable induction to Hitler's tyrannical army and conducted by medics of dubious repute has today, 65 years later, been turned into a bizarre manifestation of 'gender equality' at work.... Mental suffering due to these abusive 'health' interventions is widespread throughout the country, but nobody accepts responsibility. Even medical boards are silent and pass the buck. 'So is the law.' 'We just follow orders and regulations.' Last time such excuses were heard on a broader scale was in Nuremberg. MUSTERUNG discloses a huge state-sanctioned, sadomasochistic scandal which until now only has been protected by its status as taboo. About the Author Lars G Petersson is a 58 year old Swedish-born Londoner, activist and free-lance writer with special interest in peace, mental health, social justice and human rights. He is the author of a large number of articles and three books: DESERTERS (Danish Resistance Museum Publishing, 2005), ABUSE UK (Chipmunkpublishing, 2010) and MUSTERUNG

(Chipmunkpublishing 2010) . Trained as a nurse - specialising in mental health, social issues and addiction - Lars G Petersson has persistently used his insider knowledge to disclose matters otherwise hidden from public scrutiny. In a number of cases this has led to serious public debate and major improvements for vulnerable people. In one case criticism of serious maltreatment of (non criminal) Iran/Iraq war deserters in a Copenhagen prison (Amnesty International Report 1991) led to significant improvements in the treatment of refugees in Denmark. In another, Petersson's disclosures from a psychiatric unit under the Danish Ministry of Defence led to major reforms in military 'training methods' of recruits. As a conscripted soldier Lars G Petersson served in the Swedish air forces. He has gathered extensive knowledge about German politics and society ever since the early seventies when he worked as a massage therapist in the state of Hesse.

This authoritative collection goes beyond economic statistics and probability data to offer a robust psychological understanding of risk perception and risk taking behavior. Expert contributors examine various risk domains in life, and pinpoint cognitive, emotional, and personality factors contributing to individual differences in risk taking as well as the many nuances social demographics (e.g., culture, gender) bring to risk decisions. Coverage takes competing theories and studies into account to identify mechanisms involved in processing and acting on

uncertainty. And implications and applications are demonstrated in varied fields, from updated risk models for the insurance sector to improved risk communication in health services to considering risk perception in policy decisions. A sampling of the topics: Personality and risk: beyond daredevils—risk taking from a temperament perspective. Cognitive, developmental, and neurobiological aspects of risk judgments. The group effect: social influences on risk identification, analysis, and decision-making. Cognitive architectures as a scaffolding for risky choice models. Improving understanding of health-relevant numerical information. Risk culture as a framework for improving competence in risk management. Psychological Perspectives on Risk and Risk Analysis will be of great interest to researchers in and outside of psychology, including decision-making experts and behavioral economists. Additionally, this volume will appeal to practitioners who often have to make risky decisions, such as managers and physicians.

This book is designed to help students organize their thinking about psychology at a conceptual level. The focus on behaviour and empiricism has produced a text that is better organized, has fewer chapters, and is somewhat shorter than many of the leading books. The beginning of each section includes learning objectives; throughout the body of each section are key terms in bold followed by their definitions in italics; key takeaways, and exercises and critical thinking activities end each section.
