gender studies, human sexuality, the application of evolutionary theory to behavior, or psychology in general should consider this fascinating book must reading. - Booklist In this work on how evolution affects how we behave in the romantic and sexual realms, the author kicks away Cupid in favor of Darwin and the result is fascinating Barber is seemingly inexhaustible when it comes to diversity of thought His accessible and lively writing keeps the book from feeling too wide-ranging and scholarly. . . . those who don't mind considering that romantic inclinations may be in one's genes and not in one's heart will find much to chew on in this weighty addition to the field of evolutionary psychology. - ForeWord Magazine Nigel Barber is one of the most innovative and intriguing investigators currently writing in the field

should the higher education system be in the globalization era? In this book Jaan Valsiner and his colleagues analyze, criticize the existing and propose a new higher education system. When we say "higher education", three different layers are supposed to be there-- the lower, the middle and the higher. The latter has the function of production of new knowledges. Without new knowledge, our societies are never improving. Authors warn commercialized systems such as the "Bologna system" overestimate the homogeneity of education. "Universities without Borders" would guarantee both diversity and innovation in the higher education systems. Professor Tatsuya Sato, Dean of Research, Ritsumeikan University

The human brain is an astonishingly complex organ, but how did it come to be this way? In this book, the authors argue that evolution is crucial to understanding the brain. If we really want to understand this organ, we need to consider the various steps in evolution that led to our brains evolving in the way that they did, whilst considering how our behavioral capacities might have evolved from those of other animal species.

This volume pulls together research on several aspects of the self. One set of chapters deals with the importance of building a self based on authenticity and "Who I really am."; a second group deals with the ways in which we defend views of the self as positive and powerful; a third group is concerned with multiple aspects of self regulation. Each of the chapters is a well-written, non-technical description of an important, currently active research program.

Sport Psychology presents an accessible overview of current research and debate in the psychology of sport and exercise. Combining important theoretical frameworks and current empirical evidence, it uses sporting examples to explain concepts and applications in a clear and engaging way. The history, background and theory of each topic is discussed, before putting theory into practice through the use of case studies and practical examples. Written by internationally renowned authors, this text is essential reading for students of sport psychology at all levels, whether as part of sport studies, sport science or psychology programmes

"A most timely contribution that provokes important reflections, whatever one's perspective on the rule of law or the limits of international law. This book deserves to

be read widely in the United States and, even more so, beyond its shores, to understand the politics of pragmatism."--- Philippe Sands, University College London --

The Making of Knowledge Makers Human Motivation

Designed for the undergraduate students of psychology, this comprehensive text presents the fundamental principles and concepts of psychology. It discusses in detail various human behavioural patterns. The book describes the nature, goals and different schools of psychology. It explains various methods of psychological research such as experimental, observation, interview, questionnaire and case-study methods. Besides describing the biological bases of human behaviour, it examines different types of psychological tests which are conducted to differentiate one individual from another. This student-friendly book also elaborates the processes of learning and memory, the nature and types of memory and other important aspects of human behaviour such as motivation, emotion and intelligence. The James-Lange and Cannon-Bard theories of emotion, psychometric theory and cognitive theory of intelligence are also thoroughly dealt with. Finally, different concepts of personality and techniques of assessment of personality are explained. Key Features : • Includes a number of figures and illustrations to clarify the concepts. • Gives interesting facts and health tips. • Provides chapter-end exercises for practice. • Offers several examples for easy understanding of the subject matter. *GRE Psychology* Cengage Learning
The surge of motivational titles flooding bookstore shelves amid the worst economic crisis since the Great Depression is evidence of our society's growing obsession with self-improvement. Recently two areas of growing interest among academics have been positive organizational behavior and psychological capital. While books on these subjects have led to a new understanding of motivation, they have limited their focus to two ends of a continuum. This book pays heed to the extensive research and careful conclusions of academicians, and then crosses into the realm of self-help and massmarket literature. It has nine chapters that blend topics being taught over two decades in the classroom and practiced in management consulting. Each chapter invites you to learn both theoretical and practical concepts and encourages you to apply this knowledge to the workplace. This book thus seeks to mediate market-driven self-help dreams

and academic literature, and provides theoretical concepts that can enhance individual motivation presented in a comprehensive and enjoyable manner. This is the first motivational book that brings together the academic and popular literature to bridge the gap between common sense and theoretical concepts.
