Sex, Sexuality, Law, and (In)justice Herman and Candelaria Zapp

Violence is one of the most important challenges, not only for public health systems, but also for public mental health. Violence can have immediate as well as long-term and even transgenerational effects on the mental health of its victims. This book provides a comprehensive and wide-ranging assessment of the mental health legacy left by violence. It addresses the issues as they affect states, communities and families, in other words at macro-, meso- and microlevels, beginning by describing the impact of violence on neurobiology and mental health, as well as the spectrum of syndromes and disorders associated with different forms of violence. The work moves on to tackle violence at the international—and intranational—level before zeroing in on the nature of violence in communities such as villages or city districts. It also examines the results of violence in the family. Each type of violence has distinct effects on mental health and in each chapter specific groups are explored in depth to demonstrate the heterogeneity of violence as well as the diversity of its outcomes in the realm of public mental health. Finally, the book addresses the notion of 'undoing violence' by detailing case studies of effective interventions and prevention occurring in countries, communities and families. These cases give us pause to reflect on the nature of resilience and dignity in the context of violence and mental health. All the chapters have been written by leading authors in the field and provide a state-of-the-art perspective. The authors, from different fields of expertise, facilitate interdisciplinary and international insights into the impact of violence on mental health.

In Learning with Information Systems the author takes the developing world as the context and through a series of case studies develops a commonly used systems analysis methodology. He demonstrates how this methodology can evolve and adapt as new ideas become prominent. Issues of sustainability of information systems, participation in systems design and user ownership of systems are all examined. This book does not attempt to be prescriptive for all contexts nor does it focus on any particular technology. It addresses the essential questions and promises practical approaches which will help in the avoidance of the worst forms of disaster associated with the planning of information systems for developing countries.

Road roughness is gaining increasing importance as an indicator of road condition, both in terms of pavement performance, and as a major determinant of road user costs. This paper defines roughness measurement systems hierarchically into four groups, ranging from profilometric methods (2 groups), through response type road roughness measuring systems (RTRRMS's), and, subjective evaluation. The International Roughness Index (IRI) is defined, and the programs for it's calculation are provided. The IRI is based on simulation of the roughness response of a car travelling at 80 km/h. The report explains how all roughness measurements can be related to this scale, also when travelling at lower speeds than 80 km/h. The IRI emerges as a scale that can be used both for calibration and for comparative purposes.

The Thon Academy of Higher Magic for Young Ladies of Exceptional Talent will make Sanna a Sorceress - if she can just learn to behave. Her talents lie in the fiber arts, such as knitting waterproof socks and self-heating mittens. She embroiders a bag that is bigger on the inside than on the outside, which she then uses to rescue a handsome slave from a fate worse than death. They fall in love at first kiss. But a Sorceress must devote her entire life to her career. When her handsome prince proposes, Sanna must choose between love and magic. Pattern for self-heating mittens included "

Sex, Sexuality, Law, and (In)Justice covers a wide range of legal issues associated with sexuality, gender, reproduction, and identity. These are critical and sensitive issues that law enforcement and other criminal justice professionals need to understand. The book synthesizes the literature across a wide breadth of perspectives, exposing students to law, psychology, criminal justice, sociology, philosophy, history, and, where relevant, biology, to critically examine the social control of sex, gender, and sexuality across history. Specific federal and state case law and statutes are integrated throughout the book, but the text moves beyond the intersection between law and sexuality to focus just as much on social science as it does on law. This book will be useful in teaching courses in a range of disciplines—especially criminology and criminal justice, history, political science, sociology, women and gender studies, and law.

In this important and masterful synthesis of the Chinese and Japanese experience in America, historian Roger Daniels provides a new perspective on the significance of Asian immigration to the United States. Examining the period from the mid-nineteenth century to the early 1980s, Daniels presents a basic history comprising the political and socioeconomic background of Chinese and Japanese immigration and acculturation. He draws distinctions and points out similarities not only between Chinese and Japanese but between Asian and European immigration experiences, clarifying the integral role of Asians in American history. Daniels' research is impressive and his evidence is solid. In forthright prose, he suggests fresh assessments of the broad patterns of the Asian American experience, illuminating the recurring tensions within our modern multiracial society. His detailed supporting material is woven into a rich historical fabric which also gives personal voice to the tenacious individualism of the immigrant. The book is organized topically and chronologically, beginning with the emigration of each ethnic group and concluding with an epilogue that looks to the future from the perspective of the last two decades of Chinese and Japanese American history. Included in this survey are discussions of the reasons for emigration; the conditions of emigration; the fate of first generation immigrants; the reception of immigrants by the United States government and its people; the growth of immigrant communities; the effects of discriminatory legislation; the impact of World War II and the succeeding Cold War era on Chinese and Japanese Americans; and the history of Asian Americans during the last twenty years. This timely and thought-provoking volume will be of value not only to specialists in Asian American history and culture but to students and general historians of American life.

The economies of China and of the Latin America and the Caribbean region are the current global growth poles and, over the coming years, will grow twice or three times as quickly as the industrialised economies, which will have to adjust to slower growth and higher unemployment. The present juncture offers an opportunity to rethink global and regional partnership strategies and to put greater emphasis on South-South ties in trade, foreign direct investment (FDI) and cooperation. In this document, the Economic Commission for Latin America and the Caribbean (ECLAC) posits that China and the Latin America and the Caribbean region now enjoy a sufficiently mature relationship and are poised to make a qualitative leap towards a mutually beneficial strategic alliance.

A Handbook on Legal Languages and the Quest for Linguistic Equality in South Africa and Beyond is an interdisciplinary publication located in the discipline of forensic linguistics/ language and law. This handbook includes varying comparative African and global case studies on the use of language(s) in courtroom discourse and higher education institutions: Kenya; Morocco; Nigeria; Australia; Belgium Canada and India. These African and global case studies form the backdrop for the critique of the monolingual English language of record policy for South African courts, the core of this handbook, discussed in relation to case law and the beleaguered legal interpretation profession. This handbook argues that linguistic transformation and decolonisation of South Africa's legal and higher education systems needs to be undertaken where legal practitioners are linguistically equipped to litigate in a bilingual/ multilingual courtroom that enables access to justice for the majority of African language speaking litigants, enforcing their constitutional language rights.

The first-ever inside look at the US military's secretive Remotely Piloted Aircraft program—equal parts techno-thriller, historical account, and war memoir Remotely piloted aircraft (RPA), commonly referred to by the media as drones, are a mysterious and headline-making tool in the military's counterterrorism arsenal. Their story has been pieced together by technology reporters, major newspapers, and on-the-ground accounts from the Middle East, but it has never been fully told by an insider. In *Hunter Killer*, Air Force Lt. Col. T. Mark McCurley provides an unprecedented look at the aviators and aircraft that forever changed modern warfare. This is the first account by an RPA pilot, told from his unique-in-history vantage point supporting and executing Tier One counterterrorism missions. Only a handful of people know what it's like to hunt terrorists from the sky, watching through the electronic eye of aircraft that can stay aloft for a day at a time, waiting to deploy their cutting-edge technology to neutralize threats to America's national security. *Hunter Killer* is the counterpoint to the stories from the battlefield told in books like *No Easy Day* and *American Sniper*: While special operators such as SEALs and Delta Force have received a lot of attention in recent years, no book has ever told the story of the unmanned air war. Until now.

Within higher education, world-class universities are commonly regarded as elite research universities and play a critical role in developing a nation's competitiveness in the global knowledge economy. An increasing number of countries, regions and higher education institutions in different parts of the world have joined the same battle for academic excellence. While emerging countries and their universities make every effort to enhance their capacity and boost their research performance, the academic superpowers endeavour to maintain - if not further improve- their global positions.

"Building World-Class Universities: Different Approaches to a Shared Goal" intends to provide an in-depth picture of different approaches in pursuit of the shared goal of developing academic excellence, and to reflect the current trends in this field. Divided into three parts, the book covers: • building world-class universities from a national/regional perspective, • managing world-class universities from an institutional perspective, and • measuring world-class universities from a ranking/indicator perspective. This book not only represents a contribution to the ongoing discussion on the topic of building world-class universities, but can be seen as a continuation of the previous three volumes on this topic - "World-Class Universities and Ranking: Aiming beyond Status", "The World-Class University as Part of a New Higher Education Paradigm: From Institutional Qualities to Systemic Excellence", and "Paths to a World-Class University: Lessons from Practices and Experiences". All four books will be useful readings for students and academics in higher education generally, in addition to policy makers and informed practitioners.

Extreme Metaphors World Scientific

The powerful true-life story of one of the world's most prolific professional killers Julio Santana grew up in a poor fishing family in Brazil. At the age of 17 he committed his first murder in exchange for food for his family. Santana went on to become a killer for hire on an almost unimaginable scale, murdering more than 490 people. Yet, despite his appalling crimes, he was far from a monster. Santana was a loyal son, a family man and a devout Christian who was tormented by his conscience with every killing shot. Klester Cavalcanti, an acclaimed investigative journalist, became fascinated with the story of a normal man who happened to be one of the world's most prolific murderers. Over the course of seven years, Cavalcanti interviewed Santana by phone, and used his skills as a journalist to trace the path of his life and infamous career. The result is an extraordinary and chilling insight into a killer.

Violence and Mental Health Allen & Unwin

Debates around quality versus quantity in education can generate controversy about how quality is measured. Many question the drive to delineate and quantify precisely what works, suggesting that much value either cannot be measured or is distorted by measurement. This book explores how we can understand measurement in areas of education policy, planning, and practice that have not previously been considered measurable. The contributors ask four main questions: What do we measure and not measure when we try to measure the unmeasurable in education? When attempts have been made to measure the unmeasurable in education, what metrics have been adopted in which contexts, and with what outcomes? Why have measures been adopted as indicators of the unmeasurable, such as human rights? And how have particular organisations approached the problem of measuring the apparently unmeasurable in education, with what epistemological, normative, and conceptual resources, and consequences? The book draws on analyses from philosophy, history, sociology, and economics, with insights from national and international contexts. The contributions consider philosophical distinctions, historical experiences, and contemporary reflections on how to refine existing approaches to measurement of poverty, capability, rights, and the benefits of education. The discussion shows how measuring the unmeasurable takes account of the inequalities, complexities and uncertainties of work in education, thus suggesting a considerable deepening of the notion of education quality and measurement. This book was originally published as a special issue of *Comparative Education*.

Epistemic Governance Routledge

For millennia' humankind has searched for an intellectual Holy Grail - a unifying theory to explain the origins of the universe and our place in it. Our greatest minds' from Pythagoras and Aristotle to Galileo' Newton and Einstein' have explained the universe in terms of symmetry' harmony and order. Yet despite their best efforts' a 'theory of everything' has remained elusive' and for good reason. In *Imperfect Creation*' Marcelo Gleiser argues that there is no grand plan' cosmic blueprint or overarching explanation for our existence. In fact' the latest evidence reveals that not only are there imperfections in the fabric of the universe - they are the driving' creative forces behind its very existence. The universe' it turns out' is not elegant. It

is gloriously messy. In an absorbing narrative' Gleiser takes us to the first moments of creation' where an imbalance produced more matter than anti-matter - the birth of the physical universe. He explains the role of imperfection in the formation of galaxies and planets' and the accidents that led to the appearance of life on Earth. And his enquiries go beyond science; if there is no 'guiding principle' behind creation' then what is the nature and role of intelligent life. Imperfect Creation offers a fresh new perspective on life in an evolving cosmos. It will change the way we see ourselves and our place in the universe.
