The 20 International Conference on Chemical

Education (20 ICCE), which had the theme "Chemistry in the ICT Age" as the theme, was held from 3 to 8 August 2008 at Le Méridien Hotel, Pointe aux Piments, in Mauritius. With more than 200 participants from 40 countries, the conference featured 140 oral and 50 poster presentations. Participants of the 20 ICCE were invited to submit full papers and the latter were subjected to peer review. The selected accepted papers are collected in this book of proceedings. This book of proceedings encloses 39 presentations covering topics ranging from fundamental to applied chemistry, such as Arts and Chemistry Education, Biochemistry and Biotechnology, Chemical Education for Development, Chemistry at Secondary Level, Chemistry at Tertiary Level, Chemistry Teacher Education, Chemistry and Society, Chemistry Olympiad, Context Oriented Chemistry, ICT and Chemistry Education, Green Chemistry, Micro Scale Chemistry, Modern Technologies in Chemistry Education, Network for Chemistry and Chemical Engineering Education, Public Understanding of Chemistry, Research in

Chemistry Education and Science Education at Elementary Level. We would like to thank those who submitted the full papers and the reviewers for their timely help in assessing the papers for publication. We would also like to pay a special tribute to all the sponsors of the 20 ICCE and, in particular, the Tertiary Education Commission (<http://tec.intnet.mu/>) and the Organisation for the Prohibition of Chemical Weapons (<http://www.opcw.org/>) for kindly agreeing to fund the publication of these proceedings.

The guiding principle in writing this book was to create a textbook for students- a textbook that presents the material in a way that they learn to solve all the questions along with the strategy to approach the problems. In this book we mixed all our teaching experience of 15 years along with theoretical and experimental knowledge to generate a hand book for all students to reason

their way to a solution rather than memorize a multitude of facts, hoping they don't run out of memory. This book covers mainly 4 units with 61 sections which are real tools of Organic chemistry, which a students must know before dealing any chemical reactions. Organic chemistry is very easy and conceptual subject and need proper understanding of the basics and strategy to solve the questions in correct manner. This book will prepare your right mindset for learning Organic Chemistry. This mindset is essentially the one that focuses you on a small number of straight forward, repeated, fundamental concepts and helps you to apply them in different ways to solve the variety of problems you face in organic chemistry. This book is complete as it not only covers theory in proper sequence but also provide varieties of questions along with 10 test papers to judge your knowledge before going to start chemical reactions. In this book balance has to be achieved between the number of questions and the quality of the questions, especially

because it is relatively easy to frame a very large number of multiple-choice questions and theory of the subject. The questions in this book have been selected keeping three things in mind. First- The questions are such that they really test the understanding of the subject. Second- The questions cover all concepts. Third- The number of questions has been kept large enough to offer meaningful practice to the students.

On the cover of this book is a Pacific yew tree, found in the ancient forests of the Pacific Northwest. The bark of the Pacific yew tree produces Taxol, found to be a highly effective drug against ovarian and breast cancer. Taxol blocks mitosis during eukaryotic cell division. The supply of Taxol from the Pacific yew tree is vanishingly small, however. A single 100-year-old tree provides only about one dose of the drug (roughly 300 mg). For this reason, as well as the spectacular molecular architecture of Taxol, synthetic organic chemists fiercely undertook efforts to synthesize it. Five total syntheses of Taxol have thus far been reported. Now, a combination of isolation of a related metabolite from European yew needles, and synthesis of Taxol from that intermediate, supply the clinical demand. This case clearly demonstrates

the importance of synthesis and the use of organic chemistry. It's just one of the many examples used in the text that will spark the interest of students and get them involved in the study of organic chemistry!
