 The Eye: Basic Sciences in Practice

provides highly accessible, concise coverage of all the essential basic science required by today's ophthalmologists and optometrists in training. It is also essential reading for those embarking on a career in visual and ophthalmic science, as well as an invaluable, current refresher for the range of practitioners working in this area. This new fourth edition has now been fully revised and updated in line with current curricula, key research developments and clinical best practice. It succinctly incorporates the massive strides being made by genetics and functional genomics based on the Human Genome Project, the new understanding of how the microbiome affects all aspects of immunology, the remarkable progress in imaging technology now applied to anatomy and neurophysiology, as well as exciting new molecular and other diagnostic methodologies now being used in

microbiology and pathology. All this and more collectively brings a wealth of new knowledge to students and practitioners in the fields of ophthalmology and visual science. For the first time, this (print) edition also now comes with bonus access to the complete, fully searchable electronic text - including carefully selected additional information and new video content to further explain and expand on key concepts - making *The Eye* a more flexible, comprehensive and engaging learning package than ever before. The only all-embracing textbook of basic science suitable for trainee ophthalmologists, optometrists and vision scientists - other books concentrate on the individual areas such as anatomy. Attractive page design with clear, colour diagrams and text boxes make this a much more accessible book to learn from than many postgraduate textbooks.

Presents in a readable form an account of all the basic sciences necessary for an understanding of the eye - anatomy, embryology, genetics, biochemistry, physiology, pharmacology, immunology, microbiology and infection and pathology. More on molecular pathology. Thorough updating of the sections on pathology, immunology, pharmacology and immunology. Revision of all other chapters. More colour illustrations Comes with complete electronic version

Intraocular inflammation is particularly difficult to diagnose and treat, often resembling a complex puzzle of patient history, symptoms, imaging, and laboratory test results. Clinical Cases in Uveitis: Differential Diagnosis and Management is a unique, case-based resource designed to help you navigate the range of challenging manifestations and presentations that often mimic other diseases. More than 90 real-world uveitis cases are presented in a highly templated, easy-to-follow format, along with step-by-step guidance on the right patient questions, assessment, differential diagnosis, testing, management, and follow-up care. Provides a variety of patient presentations and scenarios and unique clinical situations that mirror day-to-day practice. Covers current diagnostic imaging modalities, including optical coherence tomography (OCT), optical

coherence tomography angiography, fluorescein angiography (FA), and indocyanine green angiography (ICG). Features diagnostic and management algorithms that assist in differential diagnosis and decision making for even the most complex cases, including those in which the patient does not improve as expected, prompting a reassessment of diagnosis and management. Contains approximately 250 high-quality images, including color anterior segment photographs, color fundus photographs, OCT images, and angiograms. Discusses distinguishing infectious from non-infectious inflammation; when and how to start systemic immunosuppressive therapy; diagnostic criteria and management of "white dot syndromes"; pediatric uveitis; masquerade syndromes, including inherited retinal degenerations, malignancies, and paraneoplastic syndromes; and much more. Includes the authors' specific thought processes and approach in particularly challenging cases. An excellent resource and study tool for ophthalmology residents and fellows, those studying for oral boards, general ophthalmologists, retina specialists, and more.
