Annotation New edition of a reference that presents the values of properties typical for the most common alloy processing conditions, thus providing a starting point in the search for a suitable material that will allow, with proper use, all the necessary design limitations to be met (strength, toughness, corrosion resistance and electronic properties, etc.) The data is arranged alphabetically and contains information on the manufacturer, the properties of the alloy, and in some cases its use. The volume includes 32 tables that present such information as densities, chemical elements and symbols, physical constants, conversion factors, specification requirements, and compositions of various alloys and metals. Also contains a section on manufacturer listings with contact information. Edited by Frick, a professional engineering consultant. Annotation c. Book News, Inc., Portland, OR (booknews.com).

A comparison between the tsarist economy on the eve of the revolution and the Soviet economy in the mid-1920s. Questions posed include, was the tsarist economy successful, but destroyed by World War I? And was the breakdown of the mixed economy of the 1920s an arbitrary political act?

An updated edition of a classic: an indispensable companion for a new era in cycling. The bicycle is almost unique among human-powered machines in that it uses human muscles in a near-optimum way. This essential volume offers a comprehensive account of the history of bicycles, how human beings propel them, what makes them go faster—and what keeps them from going even faster.

Over the years, and through three previous editions, Bicycling Science has become the bible of technical bicycling not only for designers and builders of bicycles but also for cycling enthusiasts. After a brief history of bicycles and bicycling that demolishes many widespread myths, this fourth edition covers recent experiments and research on human-powered transportation, with updated material on cycling achievements, human-powered machines for use on land and in air and water,

power-assisted bicycles, and human physiology. The authors have also added new information on aerodynamics, rolling drag, transmission of power from rider to wheels, braking, heat management, steering and stability, power and speed, and other topics. This edition also includes many new references and figures. With racks of bikeshare bikes on city sidewalks, and new restrictions on greenhouse gas-emitting cars, bicycle use will only grow. This book is the indispensable companion for a new era in cycling.

Technical innovation in industry is regarded by many people as the best way of making industry more profitable. A great deal of energy and time is being expended by businessmen and by governments discussing how best to bring about technical innovation. This book, which was first published in 1987, argues that all concerned with technical innovation should bear in mind the importance of 'networks'. 'Networks' are defined as the web of contacts which exist between suppliers, customers, and producers in industry. Drawing on extensive original research, the book discusses the need for co-ordinating technical research and development with suppliers and customers and examines in detail how this should best be done. This book is ideal for students of business and economics.

This book highlights the effects of an increasing use of information technology, IT, in manufacturing. Mainly, focus is on the changes in organisation, in working procedures and in the demands on the capabilities of the personnel, both on the shop floor and the engineering and management levels. It disseminates information from the research and development carried out under ESPRIT's Integration in Manufacturing domain as well as from other activities in similar domains in industry and academia. A particular focus is on giving an overview and resume of work undertaken in the Third and Fourth Research Framework Programmes of ESPRIT.

A value proposition is an innovation or feature that clarifies a company's core purpose and identity. In the same way profit lies at the heart of every business, so does the value proposition, communicating how its service or products fulfil the needs of their customers. While many organizations understand the importance of having a clearly defined value proposition to help them become more profitable, many businesses struggle to use them effectively. Malcolm McDonald on Value Propositions is a step-by-step guide to understanding exactly why financially quantified value propositions will help readers to increase revenue and deliver tangible results. Highly practical and filled with useful tools and checklists, this succinct guide explains the process of developing a value proposition from start to finish, how to use segmentation appeal to the relevant key accounts, and to ensure it is both financially grounded and has resonance with customers. From understanding how buying decisions are made, through to financial dashboards and value quantification tools, Malcolm McDonald on Value Propositions is perfect for anyone looking to integrate financial success into their proposition, and gain understanding of how it can be used to deliver and communicate value.

This handbook is a comprehensive collection of useful design data and reference material needed both by practising machine tool engineers and engineering students. This fully indexed volume covers design of machine elements, machine tool design practices, electrical and hydraulic systems of machine tools, machining data together with standard mathematical and basic engineering reference data. The handbook presents various aspects of machine tool design with suitable illustrations and tables contributed by senior designers in the field of machine tools. It is an authoritative practically oriented handbook consolidating the theoretical and working design practices. The handbook aims to serve students, design engineers and development engineers of machine and equipment with guidelines for making reliable and practical solutions. It will be an indispensable handbook in the field of machine tools and production engineering.

The market approach aims to establish the value of a company based on how similar firms are priced on the stock exchange or through company transactions. Using the market approach, price-related indicators such as price to earnings, sales and book values are utilised. An ever-present problem however, is that different valuation multiples and valuation methodologies tend to provide the analyst with contradictory outputs. The solution to this problem so far has been to claim that the market approach is more art than science, thus providing the analyst with the freedom to alter the multiples at their own discretion to reach a uniform value or range. Valuation: The Market Approach puts an end to this problem, providing the reader with a rational scientific-based understanding and the necessary tools to perform a sound market approach valuation, or if reviewing such valuations, provide the tools to challenge the work of the arts-based senior experts. The book begins with an in-depth review of the basics; which is then applied in a detailed worked example. Step-by-step, the reader's expertise is built towards a complete understanding and implementation of the market approach, not only on a standalone basis but also in relation to the DCF methodology. The book is aimed at the seasoned professional, but will also be invaluable to students as they apply their academic knowledge to the real world of valuation and M&A. About the author: SETH BERNSTROM is a Director at the Valuations practice of PwC. He has 15 years of experience as a valuation expert with a special focus on private equity, with long-running engagements in Valuation for some of the leading Nordic private equity houses. Additionally, he provides valuation support and valuation-

related advisory services to large and medium-sized Nordic and (Nordic-based) global companies. In addition to his regular work at PwC, he also acts as Visiting Lecturer on valuation at KTH Royal Institute of Technology in Stockholm. Furthermore, he often gives lectures and seminars on valuation at other leading Nordic universities, investment banks, companies, and organizations. He holds a Master of Science in Business Administration and Economics from the Stockholm University School of Business.
