## VAUGHAN AUGUST

**Looking for Owners** Springer Science & Business Media  
 The ecology of halophytes has a wide scope of interest, appealing to people of many disciplines. It covers widely different fields such as climatology, soil science, phytogeography, adaptive biology and agriculture. Ecologists study these specialized plants in relation to estuarine ecosystems, biology of dominant genera, germination ecology, water relations, salt secretion, and senescence. The present volume is divided into three parts and attempts to elucidate new aspects of the problems faced by this special group of plants. It tries to give the reader an overall view of saline environments and the ecology of plants found therein. In the first chapter of part one Zahran presents the halophytic vegetation of Egypt, which includes the inland and the littoral (Red Sea and Mediterranean Sea) salt marshes. The plants he describes have been classified as succulents, excretives and cumulatives, according to their adaptability to saline soils and according to their different life-forms. The second chapter throws light on the estuarine ecosystem of India. The estuaries are described by Joshi, and Bhosale as being rich in diversity of mangrove species. Making varied use of estuarine ecosystems is not only possible, but also essential because they are the meeting point between terrestrial and marine life.  
**Contributions to the ecology of halophytes** Rowman & Littlefield  
 Mushrooms recognised as edible have been collected and cultivated for many years. In the Nordic countries, the interest for eating mushrooms has increased. In order to ensure that Nordic consumers will be supplied with safe and well characterised, edible mushrooms on the market, this publication aims at providing tools for the in-house control of actors producing and trading mushroom products. The report is divided into two volumes: a. Volume I: "Mushrooms traded as food - Nordic questionnaire and guidance list for edible mushrooms suitable for commercial marketing b. Volume II: Background information, with general information in section 1 and in section 2, risk assessments of more than 100 mushroom species All mushrooms on the lists have been risk assessed regarding their safe use as food, in particular focusing on their potential content of bioactive constituents.  
**The Emergence of the Classical Style in Greek Sculpture** BRILL  
 In *The Reception of Greek Lyric Poetry in the Ancient World: Transmission, Canonization and Paratext*, a team of international scholars consider the afterlife of early Greek lyric poetry (iambic, elegiac, and melic) up to the 12th century CE, from a variety of intersecting perspectives: reperformance, textualization, the

direct and indirect tradition, anthologies, poets' Lives, and the disquisitions of philosophers and scholars. Particular attention is given to the poets Tyrtaeus, Solon, Theognis, Sappho, Alcaeus, Stesichorus, Pindar, and Timotheus. Consideration is given to their reception in authors such as Aristophanes, Herodotus, Plato, Plutarch, Athenaeus, Aelius Aristides, Catullus, Horace, Virgil, Ovid, and Statius, as well as their discussion by Peripatetic scholars, the Hellenistic scholia to Pindar, Horace's commentator Porphyrio, and Eustathius on Pindar.

*Time Out Film Guide* University of Chicago Press

This open access book explores the concept of Industry 4.0, which presents a considerable challenge for the production and service sectors. While digitization initiatives are usually integrated into the central corporate strategy of larger companies, smaller firms often have problems putting Industry 4.0 paradigms into practice. Small and medium-sized enterprises (SMEs) possess neither the human nor financial resources to systematically investigate the potential and risks of introducing Industry 4.0. Addressing this obstacle, the international team of authors focuses on the development of smart manufacturing concepts, logistics solutions and managerial models specifically for SMEs. Aiming to provide methodological frameworks and pilot solutions for SMEs during their digital transformation, this innovative and timely book will be of great use to scholars researching technology management, digitization and small business, as well as practitioners within manufacturing companies.

**Hellenistic Astronomy** Mnemosyne, Supplements

**World Cancer Report: Cancer Research for Cancer Prevention** is a multidisciplinary publication, with leading international scientists as authors and reviewers. More than 60 different chapters describe multiple aspects of cancer prevention and the research that underpins prevention, focusing on research activity during the past 5 years. Starting with the latest trends in cancer incidence and mortality worldwide, this publication provides wide-ranging insights into cancer prevention based on the known causes of cancer, factors that determine how cancer develops, and the behaviour of different tumour types, and presents a broad scope of interventions to reduce the cancer burden from a global perspective, including addressing inequalities that affect cancer prevention.

*Selected Essays of Plutarch* Routledge

In this wide-ranging study, Richard Neer offers a new way to understand the epoch-making sculpture of classical Greece. Working at the intersection of art history, archaeology, literature, and aesthetics, he reveals a people fascinated with the power of sculpture to provoke wonder in beholders. Wonder, not accuracy, realism, naturalism or truth, was the supreme objective of Greek sculptors. Neer traces this way of thinking about art from the

poems of Homer to the philosophy of Plato. Then, through meticulous accounts of major sculpture from around the Greek world, he shows how the demand for wonder-inducing statues gave rise to some of the greatest masterpieces of Greek art. Rewriting the history of Greek sculpture in Greek terms and restoring wonder to a sometimes dusty subject, *The Emergence of the Classical Style in Greek Sculpture* is an indispensable guide for anyone interested in the art of sculpture or the history of the ancient world.

*Collecting and Provenance* Routledge

This book is designed as a laboratory guide for the food microbiologist, to assist in the isolation and identification of common food-borne fungi. We emphasise the fungi which cause food spoilage, but also devote space to the fungi commonly encountered in foods at harvest, and in the food factory. As far as possible, we have kept the text simple, although the need for clarity in the descriptions has necessitated the use of some specialised mycological terms. The identification keys have been designed for use by microbiologists with little or no prior knowledge of mycology. For identification to genus level, they are based primarily on the cultural and physiological characteristics of fungi grown under a standardised set of conditions. The microscopic features of the various fungi become more important when identifying isolates at the species level. Nearly all of the species treated have been illustrated with colony photographs, together with photomicrographs or line drawings. The photomicrographs were taken using a Zeiss WL microscope fitted with Nomarski interference contrast optics. We are indebted to Mr W. Rushton and Ms L. Burton, who printed the many hundreds of photographs used to make up the figures in this book. We also wish to express our appreciation to Dr D.L. Hawksworth, Dr A.H.S. **Catalogue of Irregular Greek Verbs** John Wiley & Sons  
 R. J. Hankinson traces the history of ancient Greek thinking about causation and explanation, from its earliest beginnings through more than a thousand years to the middle of the first millennium of the Christian era. He examines ways in which the Ancient Greeks dealt with questions about how and why things happen as and when they do, about the basic constitution and structure of things, about function and purpose, laws of nature, chance, coincidence, and responsibility.

*Buildings for Music* Springer Science & Business Media

*Nature Cure*

*Genre in Archaic and Classical Greek Poetry* Nordic Council of Ministers

This book deals with some (fragmentary) poems of Alcaeus, Archilochus, Hipponax and Stesichorus. The choice of the poems was determined by external factors: all of them are written on papyrus and were first published during the last few decades.

After the first edition the fragments were discussed by many scholars, mainly in periodicals. The authors of this volume have assembled the results of this scholarly work and used it as a foundation for a carefully contituted text and an extensive overall commentary. In this way the poems will be more easily accessible than they were hitherto.

**Natural Sources of Flavourings** Bloomsbury Academic

The book focuses on how musical taste and style affected architecture and acoustics influenced musical composition.

*The Reception of Greek Lyric Poetry in the Ancient World:*

*Transmission, Canonization and Paratext* Createspace

Independent Publishing Platform

Discussions about the nature of the emotions in Hellenistic philosophy have aroused intense scholarly interest over the last few years. The topics covered by the essays in this volume range from the classical background of Hellenistic theories, through debates on emotion in the major Hellenistic schools, to discussions in later antiquity. Special emphasis is placed on the development of the Stoic views on the nature and value of the emotions. The essays are written with a high level of philosophical and classical scholarship, but contain no exclusive technicalities. Audience: This first comprehensive treatment of the emotions in Hellenistic philosophy can be read with pleasure and profit not only by professionals in ancient philosophy but also all those who are interested in the philosophy of mind and its history.

**Fungi and Food Spoilage** Oxford University Press

From "TimeOut" magazine comes this ninth edition of its film guide that features stills and information on the films covered in the pages of the magazine.

**Some Recently Found Greek Poems** Springer Nature

This collection of original articles and surveys addresses the recent advances in linear and nonlinear aspects of the theory of partial differential equations. The key topics include operators as "sums of squares" of real and complex vector fields, nonlinear

evolution equations, local solvability, and hyperbolic questions.

**Industry 4.0 for SMEs** Motilal Banarsidass Publ.

The study of provenance—the history of the creation and ownership of an artefact, work of art, or specimen—provides insights into the history of taste and collecting, illuminating the social, economic, and historic trends in which an object was created and collected. It is as much a history of people as it is of objects, and its study often reveals intricate networks of relationships, patterns of activity and motivations. This book promotes the study of the history of collecting and collections in all their variety through the lens of provenance, and explores the subject as a cross-disciplinary activity. Perhaps for the first time in a publication, it draws on expertise ranging from art history and anthropology, to natural history and law, looking at periods from antiquity through the 18th century and the Holocaust era to the present, and materials from Europe and the Americas to China and the Pacific. The issues raised are wide-ranging, touching on aspects of authenticity, cultural meaning and material transformation and economic and commercial drivers, as well as collector and object biography. The book fills a gap in the study of collecting and provenance, taking the subject holistically and from multiple standpoints, better to reflect the widening interest in provenance from a range of disciplinary perspectives. This book will be a service to the field, from established scholars and museum professionals to students of collecting history, cultural heritage, and museum studies.

*Textual Events* Springer Science & Business Media

*The Presocratics* By Philip Wheelwright

*Displaced Archives* Createspace Independent Publishing Platform

The first textbook for teaching this method to users with little mathematical background logically presents the theory and fundamentals in an easily comprehensible, self-contained way.

The result is a must-have for advanced undergraduate students,

as well as masters and graduate students and other users of single-crystal X-ray crystallography from many various disciplines.

**Time Out Film Guide** Time Out Guides

This collection tells the story of the rise of Rome from its origins as a cluster of villages to the foundation of the Roman Empire by Augustus. Chapters deal with subjects such as philosophy, arts, the conquests of Rome, Roman Emperors, Roman literature, Roman historians, and much more.

*Mushrooms traded as food. Vol II sec 2* Springer Science & Business Media

Resistance to therapies, both targeted and systemic, and metastases to distant organs are the underlying causes of breast cancer-associated mortality. The second edition of *Breast Cancer Metastasis and Drug Resistance* brings together some of the leading experts to comprehensively understand breast cancer: the factors that make it lethal, and current research and clinical progress. This volume covers the following core topics: basic understanding of breast cancer (statistics, epidemiology, racial disparity and heterogeneity), metastasis and drug resistance (bone metastasis, trastuzumab resistance, tamoxifen resistance and novel therapeutic targets, including non-coding RNAs, inflammatory cytokines, cancer stem cells, ubiquitin ligases, tumor microenvironment and signaling pathways such as TRAIL, JAK-STAT and mTOR) and recent developments in the field (epigenetic regulation, microRNAs-mediated regulation, novel therapies and the clinically relevant 3D models). Experts also discuss the advances in laboratory research along with their translational and clinical implications with an overarching goal to improve the diagnosis and prognosis, particularly that of breast cancer patients with advanced disease.

**Ancient Greek Cults** Springer Science & Business Media

In *Hellenistic Astronomy: The Science in Its Contexts*, renowned scholars address questions about what the ancient science of the heavens was and the numerous contexts in which it was pursued.
