## CAREY JAZLYN

---

### **Analysis, materials, design** CRC Press

"Environmental Science in Building covers the science, technology and services that relate to the comfort of humans and the environmental performance of buildings. The new edition of this well-established text continues with and improves the environmental narrative based on appropriate principles and technologies such as carbon, lifetime performance and ratings schemes. It also expands the building services content with new coverage of equipment options, specifications and performance implications."--Provided by publisher.

### Advanced Building Measurement Routledge

A comprehensive, up-to-date and illustrated exposition of building maintenance in all its aspects, to serve the needs of building surveyors and other professionals involved in this activity and building, surveying and architectural students. It shows the great importance of properly maintaining buildings and the advisability of providing adequate feedback to the design team. All the main building defects are described and illustrated and the appropriate

remedial measures examined. Alterations and improvements to buildings and the specifying, measurement, pricing, tendering and contractual procedures are all examined, described and illustrated. In addition, the planning and financing, execution and supervision of maintenance work receive full consideration.

### *The Nature of Physical Existence* Wiley-Blackwell

First published in 2002. Routledge is an imprint of Taylor & Francis, an informa company.

### Urban Forms Routledge

In recent decades, there has been a substantial turn towards narrative and life history study. The embrace of narrative and life history work has accompanied the move to postmodernism and post-structuralism across a wide range of disciplines: sociological studies, gender studies, cultural studies, social history; literary theory; and, most recently, psychology. Written by leading international scholars from the main contributing perspectives and disciplines, The Routledge International Handbook on Narrative and Life History seeks to capture the range and scope as well as the considerable complexity of the field of narrative study and life history work by situating these fields of study within the historical and contemporary context. Topics covered include: • The historical emergences of life history and narrative

study • Techniques for conducting life history and narrative study • Identity and politics • Generational history • Social and psycho-social approaches to narrative history With chapters from expert contributors, this volume will prove a comprehensive and authoritative resource to students, researchers and educators interested in narrative theory, analysis and interpretation.

*Commentaries on the Impact and Influence of the Work of Ivor Goodson* Taylor & Francis

This text aims to meet the needs of students studying building measurement in the early years of quantity surveying and building degree courses. 27 worked examples embracing all the principal building elements are included.

Taylor & Francis

A straightforward account of the editorial and production processes used by journalists to bring television news to the viewer. It is an invaluable text for students on journalism courses, print and radio journalists moving into television and TV journalists wishing to update their knowledge. Takes into account the latest practices and issues in the television industry. This fourth edition has been thoroughly updated to take account of the latest practices and issues in the television industry. It includes new illustrations of developments from both a technological and an editorial perspective. In a changing broadcasting environment, newcomers to television journalism are finding themselves entering a world in which an empathy with technology is as important as a way with words. The newsroom itself is now completely computerized and consequently new skills and working methods need to be mastered to take account of the revolutionary advances.

*Improving Learning Through the Lifecourse* Macmillan International Higher Education

The world of construction is intrinsically linked with that of finance, from the procurement and tendering stage of projects right through to valuation of buildings. In addition to this, things like administrations, liquidations, mergers, take-overs, buy-outs and floatations affect construction firms as they do all other companies. This book is a rare explanation of common construction management activities from a financial point of view. While the practical side of the industry is illustrated here with case studies, the authors also take the time to build up an understanding of balance sheets and P&L accounts before explaining how common tasks like estimating or valuation work from this perspective. Readers of this book will not only learn how to carry out the tasks of a construction cost manager, quantity surveyor or estimator, they will also understand the financial logic behind them, and the motivations that drive senior management. This is an essential book for students of quantity surveying or construction management, and all ambitious practitioners.

**Civil Engineering Quantities** Routledge

What is the role of narrative in how people learn throughout their lives? Are there different patterns and forms of narrativity? How do they influence learning? Based on data gathered for the Learning Lives project, which sought to understand learning by questioning individuals about their life stories, this book seeks to define a new learning theory which focuses on the role of narrative and narration in learning. Through a number of detailed case-studies based on longitudinal interviews conducted over three and four-year periods with a wide range of life story informants, Narrative Learning highlights the role of narrative and narration in an individual's learning and understanding of how they act in the world. The authors explore a domain of learning and human subjectivity which is vital but currently unexplored in learning and teaching and seek to re-position learning within the ongoing preoccupation with identity and agency. The 'interior

conversations' whereby a person defines their personal thoughts and courses of action and creates their own stories and life missions, is situated at the heart of a person's map of learning and understanding of their place in the world. The insights presented seek to show that most people spend a significant amount of time rehearsing and recounting their life-story, which becomes a strong influence on their actions and agency, and an important site of learning in itself. Narrative Learning seeks to shift the focus of learning from the prescriptivism of a strongly defined curriculum to accommodate personal narrative styles and thereby encourage engagement and motivation in the learning process. Hence the book has radical and far-reaching implications for existing Governmental policies on school curriculum. The book will be of particular interest to professionals, educational researchers, policy-makers, undergraduate and postgraduate learners and all of those involved with education theory, CPD, adult education and lifelong learning.

**Surveying for Engineers** Macmillan International Higher Education

First published in 1985. Routledge is an imprint of Taylor & Francis, an informa company.

**Building Surveys, Reports and Dilapidations** Macmillan International Higher Education

Storying the Public Intellectual: Commentaries on the Impact and Influence of the Work of Ivor Goodson offers a critical commentary on Goodson's work that avoids hagiography whilst recognising the global reach of his scholarship. With contributors from around the world, those who have collaborated with him or those who have taken up his work, the book provides the sort of social and historical contextualising that Goodson has always advocated. The accounts in this collection highlight how Goodson's integration of moral imperatives into strategically responsive scholarship can provide a useful roadmap when negotiating a path through the contemporary academic research landscape. By using his historian's orientation and sensibilities he is able to get to the heart of the logics of schooling. By connecting with other scholars and researchers around the world, he exposes how the global neo-liberal project plays out in particular settings, and so challenges pervasive understandings about the meaning of global - and the power of the neo-liberal project itself. This book is ideal reading for academics, scholars and researchers in the field of education, including those involved in initial and in-service teacher education.

**Teachers' Lives And Careers** Macmillan International Higher Education

The book fully explains the principles contained in the third edition of the Civil Engineering Standard Method of Measurement (CESMM3) and shows how they are implemented in practice. The contractual background to the measurement and valuation of civil engineering works is described in detail, as are the value and use of method-related charges. All aspects of the measurement of civil engineering work, from taking-off to bill preparation are covered; these are illustrated by some twenty-two worked examples containing working drawings and clear handwritten dimension sheets with fully explanatory notes. In addition to being completely revised and reset, the coverage is also extended with a further chapter on the measurement of the renovation of sewers and water mains.

*Teachers' Professional Lives* Routledge

First published in 2004. Routledge is an imprint of Taylor & Francis, an informa company.

**International Perspectives in Curriculum History** Macmillan International Higher Education

This book is an extension to the worked examples contained in Building Quantities Explained. It aims to produce a selection of

worked examples, supported by comprehensive explanatory notes, and covering a reasonable range of constitutional components that the candidate may face in examination.

*Building Quantities Explained* Routledge

To develop a mode of educational research which speaks both of and to the teacher we require more study of the lives of teachers. This book provides a vital insight into the ways in which teachers' backgrounds and career histories affect their teaching methods and approaches. Many issues are covered ranging from the question of teacher drop-out to the importance of teacher socialisation. The studies employ a range of different methodologies allowing the reader to assess their varying strengths and weaknesses, but throughout they reaffirm the centrality of the teacher in educational research.

*Civil Engineering Quantities. S.I* Macmillan International Higher Education

The book begins by considering the general backcloth to civil engineering works and contracts, including funding, preliminary investigations and the preparation of engineer's reports. The form and purpose of the various contract documents are examined and the principal requirements of the ICE Conditions summarised and explained. The principal tendering arrangements are described and compared, together with the more commonly practised approaches to estimating the cost of civil engineering works. Site organisation and supervision are covered in sufficient depth to illustrate the means by which a civil engineering project can be effectively planned, managed and controlled, and having regard to such important aspects as productivity, plant usage and safety of operatives. The method of measuring and valuing civil engineering works is explored and this encompasses the use of daywork, issue of interim certificates, settlement of final accounts, valuation of variations and financial control of contracts. Finally, the book examines the background to contractors' claims and how they should be presented by the contractor and dealt with by the engineer.

*Shakespeare's God* Routledge

This book is directed primarily towards providing students and practitioners with a basic grounding in the use of computers by quantity surveyors. It is divided into two parts, the first part (Chapters 1 to 8) dealing with general concepts of information technology, and the latter part (Chapters 9 to 13) dealing with specific quantity surveying issues. Covers a wide range of topics: computer hardware; operational and management implications of computer systems; legal issues; general purpose software such as word processors, spreadsheet systems and micro-computer

based data manipulation packages; public information software; development of in-house software; artificial intelligence and expert systems; the use of computers in cost planning, production of bills of quantity, post contract work and project management and computer aided design. The book is extensively referenced.

*Television News* Macmillan International Higher Education

First published in 1972. Shakespeare's God investigates whether a religious interpretation of Shakespeare's tragedies is possible. The study places Christianity's commentary on the human condition side by side with what tragedy reveals about it. This pattern is identified using the writings of Christian thinkers from Augustine to the present day. The pattern in the chief phenomena of literary tragedy is also traced

*Studying Teachers' Lives* Routledge

This popular and well-established book has been rewritten to conform to the seventh edition of the Standard Method of Measurement of Building Works (SMM7) The author explains in detail the practical measurement of building works, using some twenty-five worked examples covering all the main building components, supplemented by extensive explanatory notes that clarify the basic principles and show how they are best interpreted and applied. As in previous editions, a chief aim has been to emphasise the usefulness of the book as a practical student guide to the measurement of relatively simple building work.

*Narrative Learning* Routledge

First published in 1967, this book suggests that educational problems should not, and indeed cannot, be solved in isolation, but that we need to bring all our disciplines and resources to bear upon them. It explores in turn philosophical, psychological and sociological approaches to educational theory and examines great thinkers such as Plato, R

*Civil Engineering Contract Administration and Control* Psychology Press

Originally published in 1988. The history of curriculum has now become an extremely important area of curriculum research. The rehabilitation of historical studies has challenged mainstream psychological and philosophical theories of curriculum and it argues for a reformulation of the current dominance of scientific management models of curriculum changes. This book presents comparative data from a range of countries which help define the methodologies employed in curriculum history. It also explores some of the major curriculum issues uncovered in historical studies.
