The book offers a concise yet comprehensive understanding of real estate finance in India. The central themes of this book are functioning, instruments, and decision analysis related to home loans and residential mortgage banking. These themes are also extended to commercial real estate borrowing and secondary markets. The chapters are organized to offer practically useful and theoretically sound knowledge of real estate finance. Realistic scenarios, examples, expert opinions, illustrations, and, most importantly, hands-on financial exercises are extensively used to offer a concrete knowledge of the intricacies of real estate finance. The book systematically progresses from basic financial concepts to more complex discussions (such as exotic home loan types and their analysis). Beyond solved examples, the book also offers practice problems with answers so that a reader understands the financial instruments. PowerPoint presentations for the various chapters will be useful for instructors. Real estate investors (institutional or individuals), academics, students, professionals, and generalist real estate enthusiasts will find the book useful for their learning and real-life applications.

This book introduces three innovative concepts and associated financial instruments with the potential to revolutionise real estate finance. The factorisation of commercial real estate with factor-based real estate derivatives is the first concept analysed in this book. Methodological issues pertaining to factors in real estate risk analysis are covered in detail with in-depth academic reference. The book then analyses the digitalisation of commercial real estate. The environment in which buildings operate is changing fast. Cities which used to be made up of inanimate architectural structures are growing digital skins and becoming smarter. Smart technologies applied to the built environment are fundamentally changing buildings' role in cities and their interactions with their occupants. The book introduces the concept of smart space and analyses the emergence of 'digital rights' or property rights for smart buildings in smart environments. It proposes concepts and methods for identifying, pricing, and trading these new property rights which will dominate commercial real estate in the future. Finally, the tokenisation of commercial real estate is explored. Sometimes described as an alternative to securitisation, tokenisation is a new tool in financial engineering applied to real assets. The book suggests two innovative applications of tokenisation: private commercial real estate index tokenisation and data tokens for smart buildings. With factorisation, digitalisation, and tokenisation, commercial real estate is at the forefront of innovations. Real estate's unique characteristics, stemming from its physicality, trigger new ways of thinking which might have a profound impact on other asset classes by paving the way for micro markets. Factor-based property derivatives, digital rights, and tokens embody how commercial real estate can push the boundaries of modern capitalism and, in doing so, move at the centre of tomorrow's smart economies. This book is essential reading for all real estate, finance, and smart technology researchers and interested professionals.
