Feminist Speculations and the Practice of Research-Creation Simon and Schuster
Feminist Speculations and the Practice of Research-Creation provides a unique introduction to research-creation as a methodology, and a series of exemplifications of research-creation projects in practice with a range of participants including secondary school students, artists, and academics. In conversation with leading scholars in the field, the book outlines research-creation as transdisciplinary praxis embedded in queer-feminist anti-racist politics. It provides a methodological overview of how the author approaches research-creation projects at the intersection of literary arts, textuality, artistic practice, and pedagogies of writing, drawing on concepts related to the feminist materialisms, including speculative thought, affect theories, queer theory, and process philosophy. Further, it troubles representationalism in qualitative research in the arts. The book demonstrates how research-creation operates through the making of or curating of art or cultural productions as an integral part of the research process. The exemplification chapters engage with the author's research-creation events with diverse participants all focused on text-based artistic projects including narratives, inter-textual marginalia art, postcards, songs, and computer-generated scripts. The book is aimed at graduate students and early career researchers who mobilize the literary arts, theory, and research in transdisciplinary settings.

The Systematic Evaluation of Comparative Data Morgan & Claypool Publishers

"Claudia Lin is looking at a cliched post-college future as a chronically underemployed English major--much to the consternation of her mother, who wants her to settle down and start dating a nice Chinese boy already; her brother, who pushes her to follow in his model-minority footsteps; and her sister, who can't get over Claudia's privileged place in their mother's affections. But Claudia is used to keeping secrets from her family. Such as the fact that she prefers girls--and that she's embarking on an unsuitable but supremely fun career. Veracity, a two-and-a-half-person detective agency that operates out of a Manhattan townhouse and verifies people's online dating personas, has recruited Claudia via an online murder mystery game. A lifelong reader of mystery novels, Claudia takes to her new job sniffing out cheaters and catfishers like a latter-day lovechild of Elizabeth Bennet and Sherlock Holmes. But when one of her very first clients turns up dead, Claudia breaks with Veracity's protocols to investigate what happened, unconvinced by the story everyone else believes. The deeper she digs, the more she discovers that nothing--her client, the death, the dating platforms that claim to know us better than we know ourselves, Veracity, even her own family--may be as it seems. Part literary mystery, part family story, *The Verifiers* is a witty and incisive examination of how technology shapes our choices, and what role romantic love plays in the digital age"--

Many research projects involve analyzing sets of texts from the social web or elsewhere to get insights into issues, opinions, interests, news discussions, or communication styles. For example, many studies have investigated reactions to Covid-19 social distancing restrictions, conspiracy theories, and anti-vaccine sentiment on social media. This book describes word association thematic analysis, a mixed methods strategy to identify themes within a collection of social web or other texts. It identifies these themes in the differences between subsets of the texts, including female vs. male vs. nonbinary, older vs. newer, country A vs. country B, positive vs. negative sentiment, high scoring vs. low scoring, or subtopic A vs. subtopic B. It can also be used to identify the differences between a topic-focused collection of texts and a reference collection. The method starts by automatically finding words that are statistically significantly more common in one subset than another, then identifies the context of these words and groups them into themes. It is supported by the free Windows-based software Mozdeh for data collection or importing and for the quantitative analysis stages. This book explains the word association thematic analysis method, with examples, and gives practical advice for using it. It is primarily intended for social media researchers and students, although the method is applicable to any collection of short texts.

A Lady Trader in the Transvaal presents the South African adventures of Sarah Heckford, a once famous but now forgotten Anglo-Irish gentlewoman. After trekking to the Transvaal in 1878, this intrepid woman served as governess, doctor, builder, nurse, and farmer. When her farm failed, she broke through the barriers of gender and class to make her fortune as a smous or peddler—trading with the Africans and Afrikaners of the remote bush-velde. Caught up in the Anglo-Boer War of 1879–1880, she survived the hundred-day siege of Pretoria only to find the British dishonored and herself financially ruined.

Social media is full of dead people. Nobody knows precisely how many Facebook profiles belong to dead users but in 2012 the figure was estimated at 30 million. What do we do with all these digital souls? Can we simply delete them, or do they have a right to persist? Philosophers have been almost entirely silent on the topic, despite their perennial focus on death as a unique dimension of human existence. Until now. Drawing on ongoing philosophical debates, Digital Souls claims that the digital dead are objects that should be treated with loving regard and that we have a moral duty towards. Modern technology helps them to persist in various ways, while also making them vulnerable to new forms of exploitation and abuse. This provocative book explores a range of questions about the nature of death, identity, grief, the moral status of digital remains and the threat posed by AI-driven avatars of dead people. In the digital era, it seems we must all re-learn how to live with the dead.

From the deceptively simple narrative (Apple Cider Vinegar, Hurricane Bob) to the surrealist story (Dismemberers) and the magical tale (Jonah and Sarah and Lansky Road), the tempo fluctuates, but throughout, Shroyer-Petrov seamlessly preserves familiar voices. The stories have a genuine feel of the setting and epoch—the Russian stories work as narratives of everyday life, while the American stories offer an accurate sense of an émigré's alienation. Like all good works of fiction, these stories take on a mythic quality and transcend time and place. Each carries and communicates to the reader an aura of mystery, the enigma of love, and a meeting of the Jewish past and present. Whether he invokes lyrical dialogue, gentle irony, or sharp polemical discourse, Shroyer-Petrov shows that he is a powerful presence in Russian and Jewish literature. For those interested in fiction about new immigrants to America or in the psychology of Jews in the two decades before the Soviet Union's collapse, this collection is a must read.

The BBC America series *Orphan Black* (2013-2017) won acclaim for its compelling writing, resonant themes and innovative special effects. And for the bravura acting of Tatiana Maslany, who plays an ever-growing number of clones drawn into an increasingly dangerous world of cutting-edge science, corporate espionage, military secrets and religious fanaticism. Heir to pioneering shows centered on strong female characters, such as *Buffy the Vampire Slayer*, *Dollhouse*, *Lost* and *Xena: Warrior Princess*, *Orphan Black* models the current Golden Age of serial-form storytelling, with themes of identity, bodily autonomy, gender and sexuality playing against corporate greed and its co-opting of science. This collection of new essays analyzes the diverse clone characters and the series, covering topics including motherhood, surveillance culture, mythology, eugenics, and special effects, as well as the science behind cloning.

An expert on mind considers how animals and smart machines measure up to human intelligence. Octopuses can open jars to get food, and chimpanzees can plan for the future. An IBM computer named Watson won on *Jeopardy!* and Alexa knows our favorite songs. But do animals and smart machines really have intelligence comparable to that of humans? In *Bots and Beasts*, Paul Thagard looks at how computers ("bots") and animals measure up to the minds of people, offering the first

systematic comparison of intelligence across machines, animals, and humans. Thagard explains that human intelligence is more than IQ and encompasses such features as problem solving, decision making, and creativity. He uses a checklist of twenty characteristics of human intelligence to evaluate the smartest machines—including Watson, AlphaZero, virtual assistants, and self-driving cars—and the most intelligent animals—including octopuses, dogs, dolphins, bees, and chimpanzees. Neither a romantic enthusiast for nonhuman intelligence nor a skeptical killjoy, Thagard offers a clear assessment. He discusses hotly debated issues about animal intelligence concerning bacterial consciousness, fish pain, and dog jealousy. He evaluates the plausibility of achieving human-level artificial intelligence and considers ethical and policy issues. A full appreciation of human minds reveals that current bots and beasts fall far short of human capabilities.
