Description Blockchain is a technology that powers the development of decentralized applications. This technology allows the construction of a network with no single control that enables participants to make contributions to and receive benefits from the network directly. This book will give you a thorough overview of blockchain and explain how a blockchain works. You will begin by going through various blockchain consensus mechanisms and cryptographic hash functions. You will then learn the fundamentals of programming in Solidity - the defacto language for

developing decentralized, applications in Ethereum. After that, you will set up an Ethereum development environment and develop, package, build, and test campaign-decentralized applications. The book also shows you how to set up Hyperledger composer tools, analyze business scenarios, design business models, and write a chain code. Finally, you will get a glimpse of how blockchain is actually used in different real-world domains. By the end of this guide, you will be comfortable working with basic blockchain frameworks, and develop secure, decentralized applications in a

hassle-free manner. What you will learn Understand how blockchain hashing works Write and test a smart contract using Solidity Develop and test a decentralized application Build and test your application using Hyperledger Fabric Implement business network using Hyperledger Composer Test and interact with business network applications Who this book is for The book is for developers, analysts, or anyone looking to learn about Blockchain in a quick and easy manner. Digital Fundamentals Cengage Learning Summary Machine Learning in Action is unique book that blends the foundational theories of machine learning with the practical realities of

building tools for everyday data analysis. You'll use the flexible Python programming language to build programs that implement algorithms for data classification, forecasting, recommendations, and higher-level features like summarization and simplification. About the Book A machine is said to learn when its performance improves with experience. Learning requires algorithms and programs that capture data and ferret out the interesting or useful patterns. Once the specialized domain of analysts and mathematicians, machine learning is becoming a skill needed by many. Machine Learning in Action is a clearly written tutorial for

developers. It avoids academic language and takes you straight to the techniques you'll use in your day-to-day work. Many (Python) examples present the core algorithms of statistical data processing, data analysis, and data visualization in code you can reuse. You'll understand the concepts and how they fit in with tactical tasks like classification, forecasting, recommendations, and higher-level features like summarization and simplification. Readers need no prior experience with machine learning or statistical processing. Familiarity with Python is helpful. Purchase of the print book comes with an offer of a free PDF, ePub, and Kindle eBook from Manning.

This textbook covers the design of electronic systems from the ground up, from drawing and CAD essentials to recycling requirements. Chapter by chapter, it deals with the challenges any modern system designer faces: The

design process and its fundamentals, such as technical drawings and CAD, electronic system levels, assembly and packaging issues and appliance protection classes, reliability analysis, thermal management and cooling, electromagnetic compatibility (EMC), all the way to recycling requirements and environmental-friendly design principles. "This unique book provides fundamental, complete, and indispensable information regarding the design of electronic systems. This topic has not been addressed as complete and thorough anywhere before. Since the authors are world-renown experts, it is a foundational reference for today's design professionals, as well

as for the next generation of engineering students." Dr. Patrick Groeneveld, Synopsys Inc. A Practitioner's Approach "O'Reilly Media, Inc." Retail Management is the process which helps the customers to procure the desired merchandise from the retail stores for their personal use. It includes all the steps required to bring the customers into the store and fulfill their buying needs. Retail management saves time and ensures the customers easily locate their desired merchandise and return home satisfied. Fashion Retail Management gives insight into the principles of fashion marketing, retail buying and

merchandising and imparts basic fabric knowledge - from fiber to fabric and fabric to garment. It gives an overview of the concept of visual merchandising and lays emphasis on customer relationship management, brand management and sales management. The various processes which help the customers to procure the desired merchandise from the retail stores for their end use refer to retail management. Retail management includes all the steps required to bring the customers into the store and fulfill their buying needs. Retail management makes shopping a pleasurable experience and ensures the customers leave the store with a smile. In

simpler words, retail management helps customers shop without any difficulty. Retailing in any field tends to be an incredibly competitive process and customer-facing stores are perhaps one of the tougher forms of business to manage. There is a lot that can potentially emerge to trip up even the most experienced and diligent of retail business operators but with the right approach, there's also a huge amount that can be achieved. Here are 5 focus points that might be helpful if you're looking to improve the way you run your retail business and exceed your customer's expectations. Understand and Respond to What Your

Customers Want Like a lot of tips, our first one here is rather more easily said than done but that, in a sense, is precisely the point. Retailers need to do whatever it takes to get to know their customers and to react to what they find out quickly. You might be able to tick over by offering the same products in the same way as a matter of routine but lasting success can generally only be built on flexibility and a willingness to change along with habits among your customers. Get to Know Your Competition Like every other business around, retailers do not exist in a vacuum and it is vital for all manner of reasons that company bosses are aware of

what their rivals are offering. These days, retail competitors can come in many different forms, be it online or otherwise, and bosses should frequently take the time to get a sense of the experiences being offered elsewhere. Whether or not you decide to integrate certain ideas into your own operation, competitor research is essential because it lets you know exactly what you're up against and that information can prove to be invaluable. Invest in Your People The members of a retailer's workforce are the face of the business on a day-to-day basis and the way that they interact with customers is very important. Hiring the right people to join your team is a key

starting point but the story can't stop there and providing quality training should always be high on the agenda. This goes for staff on the shop floor, as well as supervisors and managers. Always Look to the Future The past may well have a lot to teach us as business bosses but for retailers it's vital to focus firmly on the future. It's important not to dwell too much on prior successes or failures and to remain as objective as possible as you assess different situations and dynamics. Every experience is a lesson but a good retail manager will not be obsessed with what has gone before but will be quick to understand where opportunities may lie for the future. Be

Ready for Anything One of the great things about being involved in retailing is the sheer variety of the challenges it presents from week to week and year to year. For those in charge of retail companies or operations, there is a lot to be said for expecting the unexpected and being ready to react at all times. Ultimately, the aim should be to focus on solving one problem at a time and not wasting energy on figuring out who to blame when things don't go quite according to plan.
