Over the past three decades, translation has evolved from a profession practiced largely by individuals to a cottage industry model and finally to a formally recognized industrial sector that is project-based, heavily outsourced and that encompasses a wide range of services in addition to translation. As projects have grown in size, scope and complexity, and as project teams have become increasingly distributed across geographies, time zones, languages and

cultures, formalized project management has emerged as both a business requirement and a critical success factor for language service providers. In recognition of these developments, this volume examines the application of project management concepts, tools and techniques to translation and localization projects. The contributors are seasoned practitioners and scholars who offer insights into the central role of project management in the language industry today and discuss best-practice approaches to the adaptation of generic project management knowledge, skills, tools and techniques for translation and localization projects. Wiley & Sons  
A thorough update to the industry standard for designing, developing, and deploying data warehouse and business intelligence systems The world of data warehousing has changed remarkably since the first edition of The Data Warehouse Lifecycle Toolkit was published in 1998. In that time, the data warehouse industry has reached full maturity and acceptance, hardware and software have made staggering advances, and the techniques promoted in the premiere edition of this book have been adopted by nearly all data warehouse vendors and practitioners. In addition, the term "business intelligence"

emerged to reflect the mission of the data warehouse: wrangling the data out of source systems, cleaning it, and delivering it to add value to the business. Ralph Kimball and his colleagues have refined the original set of Lifecycle methods and techniques based on their consulting and training experience. The authors understand first-hand that a data warehousing/business intelligence (DW/BI) system needs to change as fast as its surrounding organization evolves. To that end, they walk you through the detailed steps of designing, developing, and deploying a DW/BI system. You'll learn to create adaptable systems that deliver data and analyses to

business users so they can make better business decisions.

The standard on government statements of work just got better! How to Write a Statement of Work has been a standard reference for government employees and contractors for many years. Now, with this sixth edition, it is even more relevant and useful. Based on the

excellent foundation laid by the late Peter Cole, Michael Martin has updated and added material to guarantee this handbook's place in the list of "must haves" for working with government contracts. As in the earlier editions, the emphasis is on providing practical, detailed guidance on writing and preparing a description of government requirements, whether a statement of work (SOW), a performance work statement (PWS), or a statement of objectives (SOO). Among the many additions to this sixth edition are updates to reflect the current definition of an SOO as well as references and guidance regarding the development and

application of the SOO. There is a new chapter on why change management is so important on projects, legal precedents supporting change management, and how to identify when a change occurs using the SOW. This new chapter also includes information on the federal government's Standard Form 30 (SF30) to provide perspective on how change orders are used and applied in the federal government. If you are working in government contracting in any capacity, you should have this book on hand!
