## SLADE PATEL

[Getting Started with IBM WebSphere sMash, Portable Documents](#)  
 IBM Redbooks

Today, as industry professionals are identifying and targeting distinct segments in broadcast and Web audiences, the challenge is to create digital content that can be tailored and personalized to reach these distinct and differing audience segments. Transcoding and annotation are the methods that more and more engineers in the industry are using to create this type of digital content. This leading-edge book provides the in-depth technical details of transcoding and annotation that you need to create accessible and reusable digital content capable of being tailored and personalized.

### IBM i 7.1 Technical Overview with Technology Refresh Updates

IBM Redbooks  
 The power of the IBM System z, combined with the flexibility of Linux on System z, provides the ideal platform on which to implement SAP application servers. System z provides the benefits of continuous availability, high performance, scalability, and ease of management; these qualities support and complement mission-critical SAP business applications. This IBM Redbooks publication focuses on the implementation of SAP application servers on Linux on System z to leverage the synergy of this combination of products. It provides detailed information to guide you through the planning process, including resource sharing considerations, hardware and software requirements, support and maintenance. This book takes you through the steps to prepare the system environment, describing system and network configurations, and demonstrates the procedures for installing and customizing your system. It describes in detail how to install SAP application servers in z/VM Linux images, including the installation of SAP and Java and hipsockets. Finally, it provides guidance for performance tuning and introduces some useful monitoring tools.

[Enterprise Messaging Using JMS and IBM WebSphere](#)  
 IBM Redbooks

Now, two leading IBM solution architects show you how to use DB2 to create flexible infrastructures that simplify the construction of any enterprise-class business solution. [J2EE Platform Web Services](#) Artech House  
 This IBM® Redbooks® publication provides advice and guidance for IBM z/OS® Version 1, Release 10 and subsystem system programmers. z/OS is an IBM flagship operating system for enterprise class applications, particularly those with high availability requirements. But, as with every operating system, z/OS requires planned IPLs from time to time. This book also

provides you with easily accessible and usable information about ways to improve your mean time to recovery (MTTR) by helping you achieve the following objectives: - Minimize the application down time that might be associated with planned system outages. - Identify the most effective way to reduce MTTR for any time that you have a system IPL. - Identify factors that are under your control and that can make a worthwhile difference to the startup or shutdown time of your systems.

Prentice Hall Professional  
 Build robust, scalable, end-to-end business solutions with J2EE(TM) Web Services. This is the definitive practitioner's guide to building enterprise-class J2EE Web Services that integrate with any B2B application and interoperate with any legacy system. Sun senior architect Ray Lai introduces 25 vendor-independent architectural patterns and best practices for designing Web Services that deliver outstanding performance, scalability, and reliability. Lai takes you to the frontiers of emerging Web Services technologies, showing how to make the most of today's leading-edge tools, from Java Web Services Developer Pack to Apache Axis. Coverage includes: Web Services: making the business case, and overcoming the technical and business challenges Real-life examples and scenarios, and a start-to-finish application case study Expert guidance on reducing risk and avoiding implementation pitfalls Building complete business solutions with rich messaging and workflow collaboration Mainframe interoperability and B2B integration within and beyond the enterprise Framework and methodology to develop your Web Services patterns and best practices Up-to-the-minute coverage of Web Services security New applications: service consolidation, wireless, and more An extensive library of links to Web resources, reference material, and vendors Whether you're an architect, designer, project leader, or developer, these are the best practices, patterns, and techniques you need to succeed with Web services in your enterprise environment. Enterprises seeking to leverage Web Services to revolutionize the ways they deliver services to customers, partners, and employees will find the answers they need in this book. "Ray Lai's J2EETM Platform Web Services is a comprehensive look at J2EE platform architecture and should be a must read for any serious Web Services developer." --Larry Tabb, Senior Strategic Advisor, Tower Group "This is a book for true practitioners. It's for those interested in designing and implementing Web Services now-and preparing for new opportunities on the horizon." --Jonathan Schwartz, Executive Vice President, Sun Microsystems

### WebSphere Application Server V8: Administration and Configuration Guide

IBM Redbooks  
 This IBM® Redbooks® publication provides concepts, details, and examples related to the migration process for Business Process Management (BPM) products. It describes three migration

patterns for migrating earlier versions (Version 6.0.2, Version 6.1, Version 6.1.2, and Version 6.2) of the following BPM products to IBM WebSphere® Dynamic Process Edition: IBM WebSphere Process Server IBM WebSphere Enterprise Service Bus IBM WebSphere Business Modeler IBM WebSphere Business Monitor IBM WebSphere Business Services Fabric IBM WebSphere Adapters This book includes planning information and leading practices for the migration of these products. It provides information about the steps required to perform the migration, and includes two scenarios that walk you through example migrations on distributed and IBM z/OS® platforms.

### System z Mean Time to Recovery Best Practices

Packt Publishing Ltd  
 This IBM® Redbooks® publication helps you plan and execute the migration of J2EE applications developed for Oracle WebLogic Server, JBoss, GlassFish, and Apache Tomcat, so that they run on WebSphere® Application Server V7. This book provides detailed information to plan migrations, suggested approaches for developing portable applications, and migration working examples for each of the platforms from which we migrated. It is not our intention to provide a feature-by-feature comparison of these application servers versus WebSphere Application Server V7, or to argue the relative merits of the products, but to produce practical technical advice for developers who have to migrate applications from these vendors to WebSphere Application Server V7. The book is intended as a migration guide for IT specialists who are working on migrating applications written for other application servers to WebSphere Application Server V7.

### Running IBM WebSphere Application Server on System P and AIX

Pearson Education  
 Covers administrative tasks that apply to the SAS Intelligence Platform as a whole, including starting and stopping servers, monitoring servers, setting server logging options, performing backups, administering the SAS Metadata Server, administering metadata repositories, and promoting business intelligence metadata and content. This title is also available online. SAS Products and Releases: SAS BI Server: 9.3 SAS Data Integration Server: 9.3 SAS Enterprise BI Server: 9.3 SAS Enterprise Data Integration Server: 9.3 SAS Metadata Server: 9.3 Operating Systems: All  
 Digital Content Annotation and Transcoding IBM Redbooks  
 IBM WebSphere Application Server for z/OS V6 is a complex product made up of many components. This IBM Redbooks publication focuses on the problems that you can experience with WebSphere for z/OS. It is intended for system programmers and administrators who need to identify, analyze, and fix problems efficiently so that they can deliver good support for the WebSphere environment. In Part 1, we provide an overview of problem determination methodology, what skills you need, where

to find information about related topics, and how to communicate with IBM when a problem occurs. In Part 2, we describe the most common problem symptoms. Flow charts guide you through the problem analysis process step by step. Individual tasks and questions help you filter out irrelevant facts and find the problem area, so that you can identify the type, source, cause, and possibly a solution. In Part 3, we identify possible problem areas and arrange them into four phases that correspond with WebSphere for z/OS life cycle stages. We explain how to analyze the problems and provide valuable hints and tips for avoiding them. In Part 4, we provide means and tools for problem determination such as commands, logs, dumps, traces, and diagnostic tools. We describe other tools that can ease the day-to-day tasks and prevent problems. We also explain where to get these tools, show you how to use them, and provide examples. Please note that the additional material referenced in the text is not available from IBM.

[WebSphere Application Server V8.5 Concepts, Planning, and Design Guide](#) Implementing Document Imaging and Capture Solutions with IBM Datacap

This IBM® Redpaper™ publication covers the detailed step-by-step installation of IBM Tivoli® Access Manager for Enterprise Single Sign-On 8.1 onto a single-server and a clustered environment. This paper supplements the IBM Tivoli Access Manager for Enterprise Single Sign-On 8.1 Installation Guide and IBM Tivoli Access Manager for Enterprise Single Sign-On 8.1 Setup Guide. Do not use this document in isolation. Check the relevant guides in the Tivoli Access Manager for Enterprise Single Sign-On Information Center as you perform the install. There might be various reasons to install Tivoli Access Manager for Enterprise Single Sign-On into either a single server or a clustered environment. A small-scale deployment, a typical proof of technology, or a proof of concept might be the best examples for a single server installation, whereas larger scale deployments or requirements for high availability and scalability might be reasons to deploy in a clustered environment. This IBM Redpaper is targeted towards administrators and engineers who are facing a Tivoli Access Manager for Enterprise Single Sign-On deployment on either a single IBM WebSphere Application Server or a clustered IBM WebSphere Application Server Network Deployment configuration.

[Process for Attack Simulation and Threat Analysis](#) IBM Redbooks In this IBM® Redbooks® publication, we address the configuration, administration, and security of the key runtime environments in business process management: WebSphere® Process Server V7.0 and WebSphere Business Services Fabric V7.0 for z/OS®. This book provides detailed guidance to z/OS system and database administrators who want to configure WebSphere Business Process Management production topologies. We introduce production topology concepts and terminology and explore the differences between production topologies on distributed platforms and z/OS. Through a series of step-by-step instructions, you will learn how to create and verify a production topology environment for WebSphere Process Server V7 for z/OS. We extend the production topology concept for WebSphere Process Server by describing step-by-step how to add WebSphere Business Services Fabric V7 into the topology. You also get problem diagnosis and prevention guidance to use when you create your own production topologies. A separate publication that covers distributed platforms is also available: "WebSphere Business Process Management V7 Production Topologies," SG24-7854.

[WebSphere Application Server Administration Using Jython For Dummies](#)

Describes IBM's vision of collaborative personal productivity computing, presents an overview of the products included with IBM Workplace, and includes ways to implement IBM Workplace into a business.

**Computerworld** Prentice Hall Professional

Implementing Document Imaging and Capture Solutions with IBM Datacap IBM Redbooks

[Exploring IBM Eserver Zseries and S/390 Servers](#) IBM Redbooks This IBM® Redbooks® publication provides information about the concepts, planning, and design of IBM WebSphere® Application Server V8.5 environments. The target audience of this book is IT architects and consultants who want more information about the planning and design of application-serving environments, from small to large, and complex implementations. This book addresses the packaging and features in WebSphere Application Server, and highlights the most common implementation topologies. It provides information about planning for specific tasks and components that conform to the WebSphere Application Server environment. Also in this book are planning guidelines for Websphere Application Server and Websphere Application Server Network Deployment on distributed platforms. It also includes guidelines for WebSphere Application Server for IBM z/OS®. This book contains information about migration considerations when moving from previous releases. This book has been updated with the new features introduced with WebSphere Application Server V8.5.5.

**WebSphere Application Server V7: Competitive Migration Guide** Vervante

IBM WebSphere Application Server 8.0 Administration Guide is a highly practical, example-driven tutorial. You will be introduced to WebSphere Application Server 8.0, and guided through configuration, deployment, and tuning for optimum performance. If you are an administrator who wants to get up and running with IBM WebSphere Application Server 8.0, then this book is not to be missed. Experience with WebSphere and Java would be an advantage, but is not essential.

[Extending Your Business to Mobile Devices with IBM Worklight](#) IBM Redbooks

This IBM® Redbooks® publication provides system administrators and developers with the knowledge to configure an IBM WebSphere® Application Server Version 8 runtime environment, to package and deploy applications, and to perform ongoing management of the WebSphere environment. As one in a series of IBM Redbooks publications and IBM Redpapers publications for V8, the entire series is designed to give you in-depth information about key WebSphere Application Server features. In this book, we provide a detailed exploration of the WebSphere Application Server V8 runtime administration process. This book includes configuration and administration information for WebSphere Application Server V8 and WebSphere Application Server Network Deployment V8 on distributed platforms and WebSphere Application Server for z/OS® V8. The following publications are prerequisites for this book: WebSphere Application Server V8.0 Technical Overview, REDP-4756 IBM WebSphere Application Server V8 Concepts, Planning, and Design Guide, SG24-7957

[IBM i2 Integrated Law Enforcement: Technical Architecture and Deployment Guide](#) IBM Redbooks

Getting a bunch of computers to talk to each other used to be tougher than getting a straight answer from a politician in an election year. .NET web services fixes that. A unique combination of technologies, the .NET platform for the first time makes distributed computing language independent, platform independent, and device independent. Which is a pretty big deal when you consider that applications built and run on the .NET platform are available any time, any place, and on any device—in other words, .NET equals total connectivity. It also means that developers for the Internet and intranets can now use Web services to include all kinds of amazing functionalities in a new program without having to reinvent the wheel and without needing to know anything about the business or complexity of the

Web service he or she is using. Ready to join the .NET Web services revolution? Then this book is for you. Written by bestselling computer book author Anthony Mann, it puts you on the fast track to developing amazing .NET Web services. Here's your chance to: Discover XML and SOAP Master the .NET Framework and .NET server Create, test and debug Web services using Visual Studio .NET Implement your Web services throughout an organization or on the Internet Secure your Web services Find and consume Web services that were written by other developers Written in an accessible, easy-to-read format, supplemented with dozens of screen shots and highlighted tips and shortcuts, .NET Web Services For Dummies covers all the bases for beginners and intermediate .NET users alike. Important topics covered include: How Web services can benefit your organization Using the .NET framework, .NET server, Visual Studio .NET, and all the tools and technologies on the .NET platform Designing, building, testing and deploying Web services Migrating from other technologies Your total guide to bridging the digital communications gap .NET Web Services For Dummies gets you up and running in no time with the knowledge and skills you need to develop sophisticated Web service applications on the Microsoft platform.

*Pro (IBM) WebSphere Application Server 7 Internals* IBM Redbooks

IBM® ILOG® ODM Enterprise is a platform to implement and deploy corporate custom solutions for optimization-based planning and scheduling. Developing a realistic plan or schedule that provides the best possible balance between customer service and revenue goals is hard work. With ILOG ODM Enterprise, business leaders can make better decisions through what-if analysis, scenario management, and collaboration. This IBM Redpaper™ publication showcases the optimization scenario of the Supply Demand application for ILOG ODM Enterprise. This scenario highlights the product features. It includes suggested practices for using IBM Cognos® and InfoSphere™ offerings to extract data and build reports with ILOG ODM Enterprise driving the import and export of data. The target audience for this paper is IT specialists and IT architects who implement ILOG ODM Enterprise solutions and decision makers such as IT managers. *CAEN Newsletter* John Wiley & Sons

There is enormous pressure today for businesses across all industries to cut costs, enhance business performance, and deliver greater value with fewer resources. To take business analytics to the next level and drive tangible improvements to the bottom line, it is important to manage not only the volume of data, but the speed with which actionable findings can be drawn from a wide variety of disparate sources. The findings must be easily communicated to those responsible for making both strategic and tactical decisions. At the same time, strained IT budgets require that the solution be self-service for everyone from DBAs to business users, and easily deployed to thin, browser-based clients. Business analytics hosted in the Query Management Facility™ (QMFTM) on DB2® and System z® allow you to tackle these challenges in a practical way, using new features and functions that are easily deployed across the enterprise and easily consumed by business users who do not have prior IT experience. This IBM® Redbooks® publication provides step-by-step instructions on using these new features: Access to data that resides in any JDBC-compliant data source OLAP access through XMLA 150+ new analytical functions Graphical query interfaces and graphical reports Graphical, interactive dashboards Ability to integrate QMF functions with third-party applications Support for the IBM DB2 Analytics Accelerator A new QMF Classic perspective in QMF for Workstation Ability to start QMF for TSO as a DB2 for z/OS stored procedure New metadata capabilities, including ER diagrams and capability to federate data into a single virtual source *XML and Java Apress*

"This book describes how to apply application threat modeling as an advanced preventive form of security"--
