**Fascinating, informative and insightful, A Century of Aviation: Worldwide Commercial and Military offers a comprehensive overview of the development of aircraft for over 100 years. With an emphasis on the war periods, from World War I through the present, this is a book that is required reading for any fan of flying. The rich history and inventive advancements in the world of aviation comes alive in this thoroughly enjoyable volume.**  
 George E. Slagley, P.E. (Retired) grew up on a farm in Clay County, Illinois and currently resides in Greenville, Alabama. He spent four years in the Navy as an aircraft mechanic on two Aircraft Carriers. He also served in the Navy Reserve for eight years as a Flight Engineer. Mr. Slagley joined the Army, first as a technician, and then received his degree in Aircraft Maintenance Engineering, which converted his position to Supervisory General Engineer. Mr. Slagley graduated from Parks College of St Louis University in December 1969 with a BS and a MBA from Webster University in 1976. He received certification as a Professional Engineer (P.E.) from California. He was a past President of the Alabama Society of Professional Engineers, The TRADOC Professional Engineer of the Year in 1984, and the Alabama Professional Engineer Of the Year 1993/1994. Mr. Slagley spent ten years as an Aerospace Engineer, Technical Advisor (Consultant) at Ft. Rucker, Alabama, and then spent nine years in a business at Dothan, AL where he received The Who's Who in the World certification. <http://sbpra.com/GeorgeESlagley>

This landmark joint publication between the National Air and Space Museum and the American Institute of Aeronautics and Astronautics chronicles the evolution of the small gas turbine engine through its comprehensive study of a major aerospace industry. Drawing on in-depth interviews with pioneers, current project engineers, and company managers, engineering papers published by the manufacturers, and the tremendous document and artifact collections at the National Air and Space Museum, the book captures and memorializes small engine development from its earliest stage. Leyes and Fleming leap back nearly 50 years for a first look at small gas turbine engine development and the seven major corporations that dared to produce, market, and distribute the products that contributed to major improvements and uses of a wide spectrum of aircraft. In non-technical language, the book illustrates the broad-reaching influence of small turbines from commercial and executive aircraft to helicopters and missiles deployed in recent military engagements. Detailed corporate histories and photographs paint a clear historical picture of turbine development up to the present. See for yourself why *The History of North American Small Gas Turbine Aircraft Engines* is the most definitive reference book in its field. The publication of *The History of North American Small Gas Turbine Aircraft Engines* represents an important milestone for the National Air and Space Museum (NASM) and the American Institute of Aeronautics and Astronautics (AIAA). For the first time, there is an authoritative study of small gas turbine engines, arguably one of the most significant spheres of aeronautical technology in the second half of the 20th century.

*Duty-free Entry, Temporary Or Partial Suspensions of Duty, and Certain Changes in Tariff Classifications* AIAA Issues for Oct. 1939-Dec. 1944 include v. 1-5 of Organic finishing (later issued separately)

 The rotorcraft industry is developing a number of techniques, methodologies, and associated equipment for monitoring health and usage of critical rotorcraft flight components. Industry is planning to incorporate this technology on a number of new aircraft. The Federal Aviation Administration (FAA) has the responsibility for certification of these aircraft and the equipment they contain. This effort is concerned with the health and usage equipment. To best accomplish the certification of these equipment, the FAA expects to develop detailed certification criteria addressing specific issues of concern. In the near-term, the FAA objective is to develop a better understanding of what is being developed by industry (with emphasis on United States industry), what firms are involved, who are the key people involved, what parts of this technology are mature to the point that some airworthiness credit may be appropriate, and what parts of this technology are not yet mature. With information such as this, the issues that need to be address via certification criteria can be determined quickly. This effort is principally intended to provide support in reaching the FAA's near-term objectives. This report describes the results of an extensive literature search of health and usage monitoring technology. Over 1,000 abstracts were reviewed and analyzed. The report contains a description of 20 systems and abstract of 90 papers pertinent to health and usage monitoring. Artificial Intelligence, Helicopter, Diagnostics, Maintenance, Health and Usage Monitors, Rotorcraft.
