Preparatory Exercises W. W. Norton

This elementary presentation exposes readers to both the process of rigor and the rewards inherent in taking an axiomatic approach to the study of functions of a real variable. The aim is to challenge and improve mathematical intuition rather than to verify it. The philosophy of this book is to focus attention on questions which give analysis its inherent fascination. Each chapter begins with the discussion of some motivating examples and concludes with a series of questions.

Overcoming Math Anxiety Verso

Compiles qualitative and ethnographic studies conducted in Britain on various groups of young people (aged 16-19), investigating the impact of class, gender, training, education, and family background on the "successful" transition to adulthood. They found that gaps between the privileged and the disadvantaged are growing, at a time when social resolve to rectify the injustice is flagging. Distributed in the US by Taylor and Francis. How to Make Good Things Happen: Know Your Brain, Enhance Your Life AMACOM

For the last twenty years astronomy has been developing dramatically. Until the nineteen-fifties, telescopes, spectrometers, and photographic plates constituted a relatively simple set of tools which had been refined to a high degree of perfection by the joint efforts of physicists and astronomers. Indeed these tools helped at the birth of modern astrophysics: the discovery of the expansion of the Universe. Then came radioastronomy and the advent of electronics; the last thirty years have seen the application to astrophysics of a wealth of new experimental techniques, based on the most advanced fields of physics, and a constant interchange of ideas between physicists and astronomers. Last, but not least, modern computers have sharply reduced the burden of dealing with the information painfully extracted from the skies, whether from ever scarce photons, or from the gigantic data flows provided by satellites and large telescopes. The aim of this book is not to give an extensive overview of all the techniques currently in use in astronomy, nor to provide detailed instructions for preparing or carrying out an astronomical project. Its purpose is methodological: photons are still the main carriers of information between celestial sources and the observer. How we are to collect, sample, measure, and store this information is

the unifying theme of the book. Rather than the diversity of techniques appropriate for each wavelength range, we emphasize the physical and mathematical bases which are common to all wavelength regimes.

This book is a collection of eight short stories written by H. G. Wells. "The Short Stories of H. G. Wells" constitutes a must-have for lovers of the short story form and is not to be missed by fans of Wells' fantastic work. Herbert George

Wells (1866 - 1946) was a prolific English writer who wrote in a variety of genres, including the novel, politics, history, and social commentary. Today, he is perhaps best remembered for his contributions to the science fiction genre thanks to such novels as "The Time Machine" (1895), "The Invisible Man" (1897), and "The War of the Worlds" (1898). "The Father of Science Fiction" was also a staunch socialist, and his later works are increasingly political and didactic. The stories include: "The Time Machine", "The Empire of the Ants", "A Vision of Judgement", "The Land Ironclads", "The Beautiful Suit", "The Door in the Wall", "The Pearl of Love", and "The Country of the Blind". Many vintage books such as this are becoming increasingly scarce and expensive. We are republishing this book now in an affordable, modern, high-quality edition complete with a specially commissioned new biography of the author.

Giroux incorporates the most valuable insights of critical pedagogy into a more comprehensive and practical theory of schooling, committed to educating students in the language of critique and possibility.
