 EngineeringFORECASTING HOMEWORK 7
 Recall that $\{x_n\}$ is a martingale if $E[x_{n+1} | \mathcal{F}_n] = x_n$ for all n and for all
 lead times $h > 0$. Actually, to establish that

$\{x_t\}$ is a martingale, one simply needs to prove the above formula for $h = 1$ since it can be shown that if it holds for $h = 1$ it must hold for all $h > 0$. 1) Suppose $x_t = x_{t-1} + \varepsilon_t$ where $\varepsilon_t = e^{-\beta} \varepsilon_{t-2}$, $\beta \neq 0$, and $\varepsilon_t \sim \text{N}(0, \sigma^2)$.
