In its original
formulation,
'culture' was
intended to be
an agent for

mission
undertaken
with the aim
of educating
'the people'
by bringing
the best of
human
thought and
creativity to

them. But in
our
contemporary
liquid-modern
world, culture
has lost its
missionary
role and has
become a
means of
seduction: it
seeks no
longer to
enlighten the
people but to
seduce them.
The function
of culture
today is not to

but to create

while

that existing

Culture today
likens itself to

a giant

just long

He argues that Europe has a particularly important role to play in revitalizing our understanding of culture, precisely because Europe, with its great diversity of peoples, languages and histories, is the space where the Other is always one's neighbour and where each is constantly

called upon to learn from everyone else. *Microbiology with Diseases by Body System Plus MasteringMicrobiology with EText -- Access Card Package* John Wiley & Sons Microbiology is one of the core subjects for veterinary students, and since its first publication in 2002, *Veterinary Microbiology and Microbial Disease* has become an essential text for students of veterinary medicine. Fully revised and

expanded, this new edition updates the subject for pre-clinical and clinical veterinary students in a comprehensive manner. Individual sections deal with bacteriology, mycology and virology. Written by an academic team with many years of teaching experience, the book provides concise descriptions of groups of microorganisms and the diseases which they cause.

Microbial pathogens are discussed in separate chapters which provide information on the more important features of each microorganism and its role in the pathogenesis of diseases of animals. The international and public health significance of these pathogens are reviewed comprehensively. The final section is concerned with the host and is organized according to

the body system affected. Tables, boxes and flow diagrams provide information in an easily assimilated format. This edition contains new chapters on molecular diagnostics and on infectious conditions of the skin, cardiovascular system, urinary tract and musculoskeletal system. Many new colour diagrams are incorporated into this edition and

each chapter has been updated.
