AndDivide both sides of the equation by 2. $(P - 2w)/2 = 2L/2$. $P/2 - w = L$. Yep!
We are done.
Example 10.
Find for t in the following literal equation $v = u + at$. Solution.
Subtract u from both sides. $v - u = u - at - u$ $v - u = -at$ On dividing both

sides by a we obtain; $(v - u)/a = at/a$ $t = (v - u)/a$. How to solve literal equations with fractions? Solving for a Variable in a Formula - Literal Equations Literal Equation Calculator . The variables in the literal equation represents the known values. Solving a given formula for a particular variable is called as literal equations. The solve for variable calculator identifies the variables then add or

subtract variables on one side and add or subtract the whole numbers on other side. Literal Equation Calculator | Solve for Variable Calculator A literal equation is one that has several letters or variables. Examples include the area of a circle ($A = \pi r^2$) ($A = \pi r^2$) and the formula for speed ($v = D t$) ($v = D t$). In this section we solve literal equations in

terms of one variable. To do this, we use the principles we have learnt about solving equations and apply them to rearranging literal equations. Literal Equations - ChiliMath

A literal equation contains more than one variable. Literal equations and formulas can be solved for a specific variable using

the same procedures as equations containing one variable.

Example A

Solve the equation $4x + b = 12$ for x .

Step 1: Step 2: Isolate the term that contains x by subtracting b from both sides.

$$4x + b = 12$$

$$4x + b - b = 12 - b$$

$12 - b$ — Original equation

Subtraction

Property of

Equality

Combine like terms.
