A guide for using body language to lead more effectively Aspiring and seasoned leaders have been trained to manage their leadership communication in many important ways. And yet, all their efforts to communicate effectively can be derailed by even

the smallest nonverbal gestures such as the way they sit in a business meeting, or stand at the podium at a speaking engagement. In *The Silent Language of Leaders*, Goman explains that personal space, physical gestures, posture, facial expressions, and eye

contact communicate louder than words and, thus, can be used strategically to help leaders manage, motivate, lead global teams, and communicate clearly in the digital age. Draws on compelling psychological and neuroscience research to show leaders how to adjust their body language for maximum effect. Stands out as the only book to address specifically how leaders can use body language to increase their effectiveness Goman, a

respected management coach, is widely considered as the expert in body language issues in the workplace The Silent Language of Leaders will show readers how to take advantage of the most underused skills in the leadership toolkit—nonverbal skills—to improve their credibility and stay ahead of the curve. *A Leader's Guide to Leveraging Diversity* Ten Speed Press Brain Culture investigates the American obsession with the health of the

brain. Davi Johnson Thornton looks at familiar messages, tracing how brain science and colorful brain images produced by scientific technologies are taken up and distributed in popular media. She tracks the message that, "you are your brain" across multiple contemporary contexts, analyzing its influence on child development, family life, education, and public policy. Our fixation on the brain is not simply a reaction to scientific progress, but a cultural phenomenon tied to

values of individualism and limitless achievement.

About Face Kogan Page Publishers

Throughout its history, public administration has used a number of different perspectives for analyzing the discipline's theory and practice, and both mainstream and alternative lenses have produced valuable insights and prescriptions. At the same time, an individual way of looking at PA can be misleading. Alone, a solitary lens can miss critical aspects and

often gives only part of the picture. Public Administration in Perspective has been specifically crafted to give new life to public administration theory and practice by helping readers view the discipline through a variety of perspectives. Designed for the capstone course in public administration programs, as well as a fresh approach for courses in PA theory and organizational theory, this unique book provides a culminating experience--

bringing together what has been learned in previous MPA courses without simply rehashing old content. It offers a comprehensive guide to eleven major approaches to PA, and synthesizes them to deepen our understanding of the discipline. Each chapter in Part I describes the key features of the selected perspective--history, content, and proponents--and discusses the strengths and weaknesses related to PA theory and practice. Part II synthesizes the various

perspectives, with specific implications for PA management and practice. Part III concludes with a complete overview, identifying ways in which readers can think more creatively and productively about PA, putting the perspectives themselves into perspective.

Child Psychology: The Science Behind Behaviour

Management Bilquees Press

'Varieties of Psychological Inquiry' consists of twenty-five essays

(distributed across two volumes) that venture into various facets of psychology - ranging from: Freud, Jung and Sullivan, to: Piaget, Sheldrake, and beyond. Among the topics explored are: Anxiety, dissociation, abuse, charisma, developmental psychology, the 'God gene', SSRIs, memory, chronobiology, neurobiology, consciousness, and holographic theories of mind. While no particular theory of psychology is espoused during the

pages of this two volume work, a variety of theoretical and empirical issues are critically explored and reflected upon in considerable detail. In a sense, the direction in which the essays of this book point is toward epistemological horizons where what is known (possibly) seeks to merge with what is not, yet, known.

With an abundance of data and evidence, Move UP explores the societal

and biological factors that determine whether cultures are able to ascend socially, economically and intellectually. This provocative, ambitious and entertaining book devises a formula that will allow countries and individuals to assess their own potential for upward mobility. Drawing on science and statistics as much as on human instinct and emotion, *Move UP* reconsiders the modern world with a motion to improving it. *A Liturgical Praxeology on*

With the popularity and ease-of-access to internet technologies, especially social networking, a number of human-centered issues has developed including internet addiction and cyber bullying. In an effort to encourage positive behavior, it is believed that applying gaming principles to non-gaming environments through gamification can assist in improving human interaction online. *Gamification for Human*

Factors Integration: Social, Educational, and Psychological Issues presents information and best practices for promoting positive behavior online through gamification applications in social, educational, and psychological contexts. Through up-to-date research and practical applications, educators, academicians, information technology professionals, and psychologists will gain valuable insight into human-internet interaction and a possible solution for improving the

relationship between society and technology.

Preaching as

Reminding IGI Global Narrative and Dramatic Approaches to Children's Life Story with Foster, Adoptive and Kinship Families outlines narrative and dramatic approaches to improve vulnerable family relationships. It provides a model which offers new ways for parents to practise communicating with their children and develop positive relationships. The book focuses on the Theatre of Attachment

model - a highly innovative approach which draws from a strong theoretical base to demonstrate the importance of narrative and dramatic play for sharing the children's life history in the family home with their adoptive, foster or kinship parents. An emphasis is on having fun ways to work through complex feelings and divided loyalties, so as to secure attachment. This practice model aims to raise children's self-esteem and communication skills and

to combat the profound effects of abuse, neglect on trauma on children's development. This book will be of great interest for academics, post-graduate students, universities and Training bodies, service providers and practitioners involved in social work and creative therapies, child psychologists, child psychotherapists and public and private adoption and foster care agencies.

The world is an uncertain place, which is why the future and the unknown absolutely fascinate us. Veteran television journalist Mike Wallace

asked the question "What will life be like 50 years from now?" to sixty of the world's greatest minds. Their responses offer a fascinating glimpse into the cultural, scientific, political, and spiritual moods of the times. Edited and with an introduction by Mike Wallace, this book provides an imaginative and thought-provoking look into our collective soul and the critical issues that underlie our hopes, prayers, fears, and dreams for life in the 21st century. Contributors

include former presidents, leading scientists, noted writers and artists, respected religious leaders, and current political figures, including: Vint Cerf, Vice President of Google; known as a "Father of the Internet" Francis S. Collins, M.D., Ph.D., a geneticist who led the Human Genome Project Dr. Wanda Jones, Director of the Office on Women's Health at the U.S. Department of Health and Human Services Ray Kurzweil, an inventor whose developments include the first print-to-

speech reading machine for the blind and the first text-to-speech synthesizer General James E. Cartwright, Commander of United States Strategic Command Kim Dae-jung, the former President of the Republic of Korea Ronald Noble, Secretary General of Interpol Norman Borlaug, Nobel Peace Prize winner; called "the father of the Green Revolution" Carol Bellamy, former Executive Director UNICEF, first former volunteer to serve as director of Peace Corp, and current president and

Starting from the idea
that the main hindrance
to a great acting
performance is self-
consciousness on the part
of the performer, My
Character Wouldn't do
That examines the ways
in which some of our
traditional and
contemporary approaches
to acting put us into a
'mind space' that can
encourage self-
consciousness. Examining

(character, emotion,

The book is the first to
look closely at what
contemporary research
tells us about: ·

personality/character and how environment shapes us · how memory works and how actors can work with (rather than against) their memory in preparing for performance · why actors must use different kinds of brain states and imagination in the various stages of preparation, rehearsal, and performance · how actors can frame active choices in a way that refocuses the source of thought and action · why actors should distinguish the stages of preparation and the kinds of thinking / imagination

that works at each stage

 The teenager has often appeared in culture as an anxious figure, the repository for American dreams and worst nightmares, at once on the brink of success and imminent failure.
 Spotlighting the “troubled

teen” as a site of pop cultural, medical, and governmental intervention, *Chronic Youth* traces the teenager as a figure through which broad threats to the normative order have been negotiated and contained. Examining television, popular novels, science journalism, new media, and public policy, Julie Passanante Elman shows how the teenager became a cultural touchstone for shifting notions of able-bodiedness, heteronormativity, and

neoliberalism in the late twentieth century. By the late 1970s, media industries as well as policymakers began developing new problem-driven ‘edutainment’ prominently featuring narratives of disability—from the immunocompromised *The Boy in the Plastic Bubble* to ABC’s *After School Specials* and teen sick-lit. Although this conjoining of disability and adolescence began as a storytelling convention, disability became much more than a metaphor as

the process of medicalizing adolescence intensified by the 1990s, with parenting books containing neuro-scientific warnings about the incomplete and volatile “teen brain.” Undertaking a cultural history of youth that combines disability, queer, feminist, and comparative media studies, Elman offers a provocative new account of how American cultural producers, policymakers, and medical professionals have mobilized discourses of disability to cast adolescence as a

treatable “condition.” By tracing the teen’s uneven passage from postwar rebel to 21st century patient, *Chronic Youth* shows how teenagers became a lynchpin for a culture of perpetual rehabilitation and neoliberal governmentality.

The Neuroscientific Turn

Kogan Page Publishers

Consider a world in which

- Marketers use brain scans to determine consumer interest in a product
- Politicians use brain-image-based profiles to target voters
-

A test could determine your suitability for a job or to whom you will be romantically attracted. Far from science fiction, this “neurosociety”—a society in which brain science influences every aspect of daily life—is already here. Innovative researchers and cutting-edge technology, like brain imaging and brain scanning devices, have revolutionized our understanding of how we process information, communicate, trust, sympathize, and love. However, scientists and

doctors are not the only ones interested in the naked brain; advertisers, politicians, economists, and others are using the latest findings on the human brain to reshape our lives, from the bedroom to the boardroom. Despite the potential benefits, there’s obvious peril in the promise. Richard Restak explores the troubling moral and legal dilemmas that arise from corporate and political applications of this new brain research. Someday we may live in a world where

our choices, our professional and personal prospects, even our morals and ethics will be controlled by those armed with an elite understanding of the principles of neuroscience. Eye-opening and provocative, *The Naked Brain* is a startling look at the impact such unprecedented access to our most secret thoughts and tendencies will have on all of us. In *The Naked Brain*, bestselling author Richard Restak explores how the latest technology

and research have exposed the brain and how we think, feel, remember, and socialize in unprecedented and often surprising ways. Now that knowledge is being used by doctors, advertisers, politicians, and others to influence and revolutionize nearly every aspect of our daily lives. Restak is our guide to this neurosociety, a brave new world in which brain science influences our present and will even more tangibly shape our future. Citing social trends, shifts in popular

culture, the rise and fall of products in the public favor, even changes in the American vernacular, *The Naked Brain* is an illuminating and often troubling investigation of the impending opportunities and dangers being created by the neuroscience revolution, and a revelation for anyone who ever wondered why they prefer Coke over Pepsi or Kerry over Bush. This gripping book considers the history, techniques, and goals of child-targeted consumer campaigns and examines children's changing perceptions of what commodities they "need" to be valued and value themselves. In this critique of America's consumption-based society, author Jennifer

Hill chronicles the impact of consumer culture on children—from the evolution of childhood play to a child's self-perception as a consumer to the consequences of this generation's repeated media exposure to violence. Hill proposes that corporations, eager to tap into a multibillion-dollar market, use the power of advertising and the media to mold children's thoughts and behaviors. The book features vignettes with teenagers explaining, in their own words, how

advertising determines their needs, wants, and self-esteem. An in-depth analysis of this research reveals the influence of media on a young person's desire to conform, shows how broadcasted depictions of beauty distort the identities of children and teens, and uncovers corporate agendas for manipulating behavior in the younger generation. The work concludes with the position that corporations are shaping children to be efficient consumers but, in return,

are harming their developing young minds and physical well-being.
