builds a snowman who comes to life, and their adventures together, has become a children's classic. It's popularity has been further enhanced by frequent television broadcasts of the award winning cartoon film The Snowman. In this suit for clarinet and piano, composer Howard Blake recreated the story in words and music based on the scenes from the film. The music, which includes the hit song Walking in the Air, is easy enough to be played by pianists and clarinet players of all ages and abilities.

New York City native and gifted pianist George Gershwin blossomed as an accompanist before his talent as a

songwriter opened the way to Broadway, where he fashioned his own brand of American music. He composed a long run of musical comedies, many with his brother Ira as lyricist, but his aspirations reached beyond commercial success. A lifetime learner, Gershwin was able to appeal to listeners on both sides of the purported popular-classical divide. In 1924—when he was just twenty-five—he bridged that gap with his first instrumental composition, *Rhapsody in Blue*, an instant classic premiered by Paul Whiteman’s jazz orchestra, as the anchor of a concert entitled “An Experiment in Modern Music.” From that time forward his work as a

composer, pianist, and citizen of the Jazz Age made him in some circles a leader on America’s musical scene. The late 1920s found him extending the range of the shows he scored to include the United Kingdom, and he published several articles to reveal his thinking about a range of musical matters. Moreover, having polished his skills as an orchestrator, he pushed boundaries again in 1935 with the groundbreaking folk opera, *Porgy and Bess*—his magnum opus. Gershwin’s talent and warmth made him a presence in New York’s musical and social circles (and linked him romantically with pianist-composer Kay Swift). In 1936 he and Ira moved west to

write songs for Hollywood. Their work was cut short, however, when George developed a brain tumor and died at thirty-eight, a beloved American artist. Drawing extensively from letters and contemporaneous accounts, acclaimed music historian Richard Crawford traces the arc of Gershwin's remarkable life, seamlessly blending colorful anecdotes with a discussion of Gershwin's unforgettable oeuvre. His days on earth were limited to the summertime of life. But the spirit and inventive vitality of the music he left behind lives on.

2D Materials for Infrared and Terahertz Detectors provides an overview of the performance of emerging detector materials, while also offering, for the first time, a comparison with traditional materials used in the fabrication of infrared

and terahertz detectors. Since the discovery of graphene, its applications to electronic and optoelectronic devices have been intensively researched. The extraordinary electronic and optical properties allow graphene and other 2D materials to be promising candidates for infrared (IR) and terahertz (THz) photodetectors, and yet it appears that the development of new detectors using these materials is still secondary to those using traditional materials. This book explores this phenomenon, as well as the advantages and disadvantages of using 2D materials. Special attention is directed toward the

identification of the most-effective hybrid 2D materials in infrared and terahertz detectors, as well as future trends. Written by one of the world's leading researchers in the field of IR optoelectronics, this book will be a must-read for researchers and graduate students in photodetectors and related fields. Features

- Offers a comprehensive overview of the different types of 2D materials used in fabrication of IR and THz detectors, and includes their advantages/disadvantages
- The first book to compare new detectors to a wide family of common, commercially available detectors that use traditional materials.
