providing an objective

appraisal of the environmental impacts of the production, use and disposal of reusable and disposable nappy systems for the UK.... Disposable and reusable nappies in the UK: life cycle ... Life cycle assessment is a “cradle-to-grave” approach for determining the financial and environmental costs of a product over its entire life. 13, 14 There are few published life cycle assessment studies of medical items (ref. 3 in Table 1). 15 - 21 Our group recently performed a life cycle assessment of anesthetic drug trays, finding that reusable trays were both environmentally and financially advantageous to single-use trays. 19

Drug trays, however, do not require sterilization, an ... A Life Cycle Assessment of Reusable and Single-Use Central ... Life Cycle Assessment LCA is an internationally accepted and standardized method in DIN EN ISO 14040 (Deutsches Institut und für Normung, 2006). It considers environmental aspects and potential environmental impacts of a product or service throughout its whole life cycle - from raw material extraction through production and use up to final disposal. Life cycle assessment of a disposable and a reusable ... On the basis of such criteria, single-use disposable medical devices are increasingly supplanting reusable

devices in the United States (US) and elsewhere. 1 Although purchase and maintenance costs for disposable devices are perceived to be less than for reusables, this fails to account for indirect costs to society from the environmental impacts attributable to the entire life cycle of a device. Such an analysis is commonly performed using life cycle assessment. Comparative Life Cycle Assessment of Disposable and ... This life cycle assessment aims to evaluate the environmental performances of reusable plastic crates (RPCs), which are used for the distribution of 36% of fruit and vegetables in Italy. RPCs can... (PDF) Life

Cycle Assessment of Reusable Plastic Crates (RPCs) Australian data were used here in a life cycle assessment of three types of nappies (disposable, home-washed re-usable, and commercially-washed reusable). Four environmental indicators were used: water resource depletion, non-renewable energy depletion, solid waste and land area for resource production. LIFE CYCLE ASSESSMENT: REUSABLE AND DISPOSABLE NAPPIES IN ... • To compile a detailed life cycle inventory of the environmental burdens associated with the production, use and disposal of shaped and prefold reusable(1) nappies and disposable nappies. • To use... An

updated lifecycle assessment study for disposable and ...The invisible lever behind these claims is a type of study called a life-cycle assessment, or LCA. It is a method of analysis that has evolved over the past 60 years to give corporate strategists and policy makers the ability to make sustainability decisions by measuring the environmental impact of various materials and products from "cradle to grave." Do life-cycle assessments tell the whole story about ...The environmental impact of each system in each scenario has then been analysed using the life cycle assessment methodology. Two algorithms and a number of coefficients were derived to

simplify data collection and impact analysis for all scenarios. A Comparative Life Cycle Assessment of Disposable and ...Australian data were used here in a life cycle assessment of three types of nappies (disposable, home-washed re-usable, and commercially-washed reusable). Four environmental indicators were used: water resource depletion, non-renewable energy depletion, solid waste and land area for resource production.
