With the application of the Green function method the expressions of the state vectors and the energies of the stationary states of the system in the regime of the optical ...Optical Resonance of A Three-Level System in Semiconductor ...Overview. Resonance occurs when a system is able to store and easily transfer energy between two or more different storage modes (such as kinetic energy and potential energy in the case of a simple pendulum). However, there are some

losses from cycle to cycle, called damping. When damping is small, the resonant frequency is approximately equal to the natural frequency of the system, which is a ... Resonance - Wikipedia
