 Body Knowledge and Curriculum examines student understandings of body knowledge in the context of creating and interrogating visual art and culture. It illustrates a six-month research study conducted in an alternative secondary school in a large urban city. During the research project, students created a number of visual art works using a diversity of material explorations as a means to think through the body as a process of exchange and as a bodied encounter. The book engages with feminist theories of touch and inter-embodiment, questioning the materiality and lived experiences of the body in knowledge production, in order to provoke different ways of theorizing self/other relations in teaching and learning. This volume is important because it explores the ways in which youth understand the complex, textured, and often contradictory discourses of body knowledge, and seeks to intentionally create alternative pedagogical and curricular practices to ones that subscribe to a healthy body model. Additionally, enacting educational research as living inquiry, this book is an exemplar of the arts-based methodology, *art/tography*. Body Knowledge and Curriculum is a valuable text for courses in curriculum theory, art education, qualitative research methodologies, visual culture and pedagogies, and feminist theory. Appropriate for advanced undergraduate students, pre-service teacher education students, and graduate students, the book provides an interdisciplinary investigation into body research.

Collaborating with a varied cast of characters--beekeepers, mycologists, astronomers, physicists, bees, cats, snowballs, tango dancers, passersby, plants, curators, hotel porters--Canadian artist Diane Borsato creates works that propose eccentric models for relating to one another and to the world. For her project Italian Lessons, she attempted to learn Italian by learning salsa, physics, first aid and beekeeping by way of Italian instruction. In Terrestrial/Celestial, Borsato coordinated an unconventional exchange of observational practices--from opposite ends of the scale--between amateur mycologists and amateur astronomers. In a new work, Walking Studio, Borsato proposes a different space for research and reflection with her mobile field study lab,

comprised of a study center and fully functional sauna. This overview is published to accompany a solo exhibition at the Art Gallery of York University in 2012.

What comes after the reconceptualization of curriculum studies? What is the contribution of the next wave of curriculum scholars? Comprehensive and on the cutting edge, this Handbook speaks to these questions and extends the conversation on present and future directions in curriculum studies through the work of twenty-four newer scholars who explore, each in their own unique ways, the present moment in curriculum studies. To contextualize the work of this up-and-coming generation, each chapter is paired with a shorter response by a well-known scholar in the field, provoking an intra-/inter-generational exchange that illuminates both historical trajectories and upcoming moments. From theorizing at the crossroads of feminist thought and post-colonialism to new perspectives that include critical race, currenre, queer southern studies, Black feminist cultural analysis, post-structural policy studies, spiritual ecology, and East-West international philosophies, present and future directions in the U.S. American field are revealed.

This thorough reference shows how stable isotopes can be applied to understanding the palaeoenvironment, with chapters on the interpretation of isotopes in water, tree rings, bones and teeth, lake sediments, speleothems and marine sediments. The book offers detailed advice on calibration, including a multi-proxy approach, using isotope signals from different materials or combined with other palaeoenvironmental techniques, to enhance the reliability of readings.

Borsato, Giuseppe, 1771-1849 Cambridge University Press
 During the past five decades, we have witnessed a tremendous evolution in water resource system management. Three characteristics of this evolution are of particular note: First, the application of the systems approach to complex water management problems has been established as one of the most important advances in the field of water resource management.

Second, the past five decades have brought a remarkable transformation of attitude in the water resource management community towards environmental concerns and action to address these concerns. Third, applying the principles of sustainability to water resource decision-making requires major changes in the objectives on which decisions are based, and an understanding of the complicated inter-relationships between existing ecological, economic, and social factors. The Special Issue includes 15 contributions that offer insights into contemporary problems, approaches, and issues related to the management of complex water resources systems. It will be presumptuous to say that these 15 contributions characterize the success or failure of the systems approach to support water resources decision-making. However, these contributions offer interesting lessons from current experiences and highlight possible future work.

In July, 2010, the International Association for Assyriology met in Barcelona, Spain, for 5 days to deliver and listen to papers on the theme "Time and History in the Ancient Near East." This volume, the proceedings of the conference, contains 70 of the papers read at the 56th annual Rencontre, including the papers from several workshop sessions on "architecture and archaeology," "early Akkadian and its Semitic context," "Hurrian language," "law in the ancient Near East," "Middle Assyrian texts and studies," and a variety of additional papers not directly related to the conference theme. The photo on the back cover shows only a representative portion of the attendees, who were warmly hosted by faculty and students from the University of Barcelona.

This 2004 Companion is a collection of specially commissioned essays on one of the most influential opera composers in the repertoire. The volume is divided into four parts, each exploring an important element of Rossini's life, his world, and his works: biography and reception; words and music; representative operas; and performance. Within these sections accessible chapters, written by a team of specialists, examine Rossini's life and career; the reception of his music in the nineteenth century and today; the librettos and their authors; the dramaturgy of the operas; and Rossini's non-operatic works. Additional chapters centre on key individual operas chosen for their historical importance or position in the present repertoire, and include *Tancredi*, *Il barbiere di Siviglia*, *Semiramide*, and *Guillaume Tell*. The last section, *Performance*, focuses on the history of Rossini's operas from the viewpoint of singing and staging, as well as the influence of editorial work on contemporary performance practice.

The Concurrent Engineering (CE) approach was developed in the 1980s, based on the concept that different phases of a product life cycle should be conducted concurrently and initiated as early

as possible within the Product Creation Process (PCP). CE concepts have matured and become the foundation of many new ideas, methodologies, initiatives, approaches and tools. This book contains the proceedings from the 23rd ISPE Inc. International Conference on Transdisciplinary (formerly: Concurrent) Engineering, held in Curitiba, Parana, Brazil, in October 2016. The conference, entitled 'Transdisciplinary Engineering: Crossing Boundaries', provides an important forum for international scientific exchange on Concurrent Engineering and collaborative enterprises, and attracts the participation of researchers, industry experts and students, as well as government representatives. The 108 peer reviewed papers and keynote speech included here, range from theoretical and conceptual to strongly pragmatic works, which are organized into 17 sections including: Concurrent Engineering and knowledge exchange; engineering for sustainability; multidisciplinary project management; collaborative design and engineering; optimization of engineering operations and data analytics; and multidisciplinary design optimization, among others. The book gives an overview of the latest research, advancements and applications in the field and will be of interest to researchers, design practitioners and educators.

Facies, Environments, and Processes MDPI

This book provides an up-to-date compilation of the latest research on the petrography, facies, paleoenvironmental significance and economic aspects of continental carbonates. The overall organization of the book first emphasizes the descriptive aspects and processes operating on carbonate deposits in greatly

varied settings, and then considers applications for basin analysis, as well as economic and historical aspects. This volume will be a valuable tool for graduate and postgraduate students as well as for experienced researchers. The second part (volume 62 in this series) will deal with the geochemistry, diagenesis and applications of carbonates in continental settings. Covering the greatly varied aspects of carbonate deposits from continental settings deposits Clear and easy to follow organization Up to date information, so readers can find references from the classic literature to the most recent research
