**The Henry Ford Manual** McGraw Hill Professional

The best-selling text has been completely revised and revitalised in this fifth edition, with the authors once again encouraging general practitioners, medical students, general physicians and early stage dermatology specialist trainees and interns to relish the unique challenge of diagnosing and treating skin conditions. Clinical Dermatology, 5th edition contains over 400 high quality pictures and diagrams combined with colourful phrases to illustrate and entertain as it teaches. The book has established a reputation as a 'way of learning' and as an accessible guide to the subject for the aspiring specialist. Readers are guided through the maze that too often lies between the presenting skin complaint and its final diagnosis and treatment. The authors have skilfully crafted an easily read text with enough detail to clarify the subject, but not enough to obscure it. This fifth edition contains new chapters on non-invasive physical treatment and dermoscopy, and new material on cosmetic dermatology, surgical dermatology, the skin and the psyche, and dermatoses of non-Caucasian skin. The text throughout the book has been updated in line with developments in the science and practice of dermatology. "... brilliantly succeeds in enticing you to look further. The writing is clear, and the joint British-American authorship avoids any parochial views." From a review of a previous edition in BMJ "...a very well-presented book...an excellent aid for teaching. I recommend this book highly to individuals and departments." From a review of a previous edition in J Derm Treatment "... provides a good overview of the structure and function of the skin as well as a good foundation for learning dermatology...well organized and includes a chapter

dedicated to skin signs of systemic disease which is not covered in the other dermatology primers." From a review of a previous edition in JAMA

**Clinical Dermatology E-dition** Elsevier

Dermatology is the branch of medicine, involving the medical and surgical management of the conditions of the hair, scalp, skin and nails. Conditions of the human dermis constitute a spectrum of dermatoses as well as nonpathologic states like racquet nails and melanonychia. The diagnosis of these is made by gathering information regarding the skin lesion(s), symptoms, morphology, duration, color, etc. Nail diseases are determined by an

inspection of pliability, color changes and markings, shape and texture. Some nail diseases are Onychoptosis, Paronychia, Onychia, Onychocryptosis, etc. Hair disease may usually refer to baldness or excessive shedding of hair. Balding can occur in a localized or diffused area, and can be scarring or non-scarring. Some of the dermatological therapies for the treatment of such conditions are cryosurgery, hair transplantation, tumescent liposuction, vitiligo surgery, Mohs surgery, etc. This book contains some path-breaking studies in the field of dermatology. It elucidates new techniques of diagnosis and treatment of dermatological conditions in a multidisciplinary manner. It is appropriate for students seeking detailed information in this area as well as for experts.
