Source separation of waste and subsequent recycling processes are promising solutions on the road

to a circular economy. They reduce waste disposal and the need for resource deployment, while also producing secondary raw materials; as such, they have a significant effect on climate protection. This book presents source separation technologies and related aspects that form the basis for efficient recycling and a modern approach to waste management. It examines legislative drivers and policy aspects of adequate waste collection schemes, as well as segregation technologies and the success factors for their implementation. Summarizing the outcomes of a Sino-German workshop, the focus of this volume is mainly on the current situation in China and Germany. However, the findings are applicable to a broad range of situations and regions around the world. In addition, the book demonstrates the relevance of source separation for climate protection and describes alternative separation technologies. Given the breadth and depth of its coverage, the volume will appeal to environmental scientists, engineers, economists, waste managers and policymakers alike.

Her so-called gift put her in perilous situations... Janet Rodman barely controlled her psi ability as an empath to teach school and hang with a few friends. She never knew when a wave of unsuitable emotions from others would assault her. She had learned to build walls to live her life but evil could break them down. A job as a private tutor kept her safe from assault...or so she thought. He wasn't looking for a woman in his life... Former SEAL and top tier attorney J. T. Fitzpatrick wasn't interested

in bringing a woman into his house. A bitter divorce took care of that. But when his friends at The Phoenix Agency called on his help to rescue a woman in danger, how could he say no? He's unprepared for the instant attraction to Janet Rodman, but he's not looking for a relationship and this is supposed to be a strictly business deal. The Darkman isn't about to let some woman interrupt his mission in life... His plan is working perfectly, and the bodies are piling up. He can't let Janet Rodman screw them up. But when she disappears, he pulls out all stops to find and eliminate her. And he'll kill anyone who gets in the way. With the chemistry exploding between them, can the former SEAL keep Janet safe and destroy the killer before he destroys them?

Through My Eyes Springer Nature

These are not mere dreams and visions: these are a calling. Six people. Five mind-numbing visions. Four ancient and mysterious artifacts. Two exotic locations. And one greedy man who will stop at nothing, not even murder, to achieve his goal. Rev. Adam Bridger and his wife, Dr. Rachel Tremaine are once again in the center of an adventure not of their making. And joining them are four total strangers who, along with Rachel, have seen visions that most mortals can't imagine. They have been called on a mission that will forever change the world--if they survive.

Microbial biosurfactant compounds are a group of structurally diverse molecules produced by microorganisms, and are mainly categorized according to their chemical structure. The diversity of microbial biosurfactants makes them versatile and means that they offer a range of capabilities, while at the same time being economically sustainable. As such, they have potential applications in environmental processes, as well as in food, biomedicine and other industries. This book discusses innovative approaches and cutting-edge research that utilize the various properties of biosurfactants. Drawing on research from around the globe, it provides an up-to-date review of biosurfactant applications and their importance in fields such as medicine, gene therapy, immunotherapy, antimicrobial bioremediation and agriculture. It also discusses their anti-adhesive properties. The book will appeal to academics and researchers in the field of microbiology, as well as policymakers. It also serves as additional reading material for undergraduate and graduate students of agriculture, ecology, soil science, and environmental sciences.

Contracts, Agreements and Leases Springer

The perfect accompaniment to any torts casebook, *The Forms and Functions of Tort Law* covers all the major cases and issues in the standard torts course, sharing Professor Abraham's scholarly insights developed over 25 years of teaching. This analytical text addresses the cases and analyzes their implications, presenting the law of torts within a curricular context and covering the materials that law students are likely to encounter in a variety of courses. The straightforward, readable text in this paperback addresses both rules and policy and presents topics in a way that helps students grapple with the issues more effectively. Organized in the traditional manner, topics covered include intentional torts, negligence, cause-in-fact, proximate cause, defenses, strict liability, nuisance, products liability, damages, tort reform, invasion of privacy, defamation, misrepresentation, and the

economic interference torts. Each chapter stands on its own, making the book ideal for use as a classroom text as well as for self-directed reading by students.

Microbial Biosurfactants Springer

Living systems synthesize seven different classes of polymers. They provide structure and form for cells and organisms, function as catalysts and energy storage and carry the genetic information. All these polymers possess technically interesting properties. Some of these biopolymers are already used commercially. This special volume of *Advances in Biochemical Engineering/Biotechnology* comprises 10 chapters. It gives an overview of the water insoluble biopolyesters, in particular of the microbially synthesized poly-hydroxyalkanoate (PHA) family. It reports the state of the art of metabolism, regulation and genetic background, the latest advances made in genetic optimization of bacteria, "construction" of transgenic plants and in vitro synthesis by means of purified enzymes. Furthermore, it describes relevant technologies and evaluates perspectives concerning increasing the economic viability and competitiveness of PHA and discusses applications in medicine, packaging, food and other fields.
