The Dow Jones-Irwin Guide to Tax Planning

Elsevier

Originally published in 1974, this is a detailed study of the financial administration of the Chinese government during the Ming dynasty (1368-1644), with particular attention to the sixteenth century, a topic about which very little has been published either in Chinese or any Western language. Professor Huang has worked through an enormous quantity and variety of source material - in particular the 133 substantial volumes of the Ming Veritable Records - and has compared the documents on financial matters with the entries in local gazetteers. The complicated workings of government finance present great difficulties to all specialists in Chinese financial and administrative history and in different branches of local Chinese history from the fifteenth century onwards. Professor Huang's study will provide all such researchers with

an authoritative work of reference.

A dizzying trip through the mind(s) of the provocative and influential thinker Nick Land. During the 1990s British philosopher Nick Land's unique work, variously described as "rabid nihilism," "mad black deleuzianism," and "cybergothic," developed perhaps the only rigorous and culturally-engaged escape route out of the malaise of "continental philosophy" —a route that was implacably blocked by the academy.

However, Land's work has continued to exert an influence, both through the British "speculative realist" philosophers who studied with him, and through the many cultural producers—writers, artists, musicians, filmmakers—who have been invigorated by his uncompromising and abrasive philosophical

vision. Beginning with Land's early radical rereadings of Heidegger, Nietzsche, Kant and Bataille, the volume collects together the papers, talks and articles of the mid-90s—long the subject of rumour and vague legend (including some work which has never previously appeared in print)—in which Land developed his futuristic theory-fiction of cybercapitalism gone amok; and ends with his enigmatic later writings in which Ballardian fictions, poetics, cryptography, anthropology, grammatology and the occult are smeared into unrecognisable hybrids. Fanged Noumena gives a dizzying perspective on the entire trajectory of this provocative and influential thinker's work, and has introduced his unique voice to a new generation of readers.

Authoritative and readable, this book is the first historical overview of US federal tax systems published since 1967. Its coverage extends from the ratification of the Constitution to the present day. Brownlee describes the five principal stages of federal taxation in relation to the crises that led to their adoption - the formation of the republic, the Civil War, World War I, the Great Depression, and World War II - and discusses the significant modification during the

Reagan presidency of the last stage. Brownlee also addresses the proposals made since the fall of 1994 congressional elections under the 'Contract with America' and competing schemes, and he assesses today's conditions for a tax revolution in the light of the national emergencies that have produced revolutions in the past. While focusing on federal policy, Brownlee also attends to the related history of state and local taxation.

Concerns about global warming and the depletion of oil reserves have led to significant research into more sustainable composite materials made from natural materials. Recently, research has focussed on the development of nanoscale

reinforcements for this new group of composites, significantly improving and extending their range of desirable properties. Environmentally friendly polymer nanocomposites summarises this wealth of research and its practical implications. After an introduction to the subject, part one looks at matrix and reinforcement materials as well as their characterisation. Part two reviews key properties such as tensile and dynamic mechanical properties and thermal

stability. It also considers issues such as barrier properties, biodegradability, rheology, electrical and thermal conductivity. The book concludes by reviewing potential applications. This book is ideal for polymer and material scientists, researchers and engineers. It will also help industrial researchers and R&D managers who want to bring advanced eco-friendly polymer composite-based products into the market.

Summarises the practical implications of the development of nanoscale reinforcements for sustainable composite materials made from natural materials Examines matrix and reinforcement materials and their characterisation and reviews key properties such as tensile and dynamic mechanical properties Considers barrier properties, biodegradability, rheology, electrical and thermal conductivity and potential applications
