The Land Registration Act 2002 has been in force for almost fifteen years. When enacted, the legislation, which replaced the Land Registration Act 1925, was intended to offer a clear and lasting framework for the registration of title to land in England and Wales. However, perhaps confounding the hopes of its drafters, the legislation's interpretation and application has since generated many unanticipated problems which demand attention. In this book's twenty chapters, leading land law scholars, Law Commissioners past and present, judges, and Registry lawyers unpick key technical controversies, and expose underlying theoretical and policy concerns. Core issues addressed in these chapters include: the legitimate ambitions of registration regimes; the nature and security of title afforded by registration; the resolution of priority disputes affecting registered titles; the relationship between the general law and the registration regime; and new challenges presented by modern technological developments.

**New York Real Estate Exam Review** Bloomsbury Publishing  
This book examines the occupational therapy paradigm (its focal viewpoint, core constructs, and values) as well as the role of complexity/chaos theory as a scientific framework for occupational therapy research and practice. Unlike other current OT texts, this book uses clinical case examples to illustrate application of proposed changes to make procedures consistent with the latest Occupational Therapy Practice Framework. The reader walks away with a clear grasp of the theoretical principles guiding his or her treatment interventions, the explanations

behind those principles, and the applicable intervention for said techniques and procedures. An emphasis on clinical-reasoning skills, including information on different types of reasoning skills as well as the MAPP model of teaching helps the student and clinician translate theoretical principles into practice. The section on specific interventions addresses each of the conceptual practice models according to a consistent chapter template, which enables the reader to apply conceptual practice models in real-world contexts. Preview questions at the beginning of each chapter alert the reader to important concepts in the upcoming text. Critical analysis of the theoretical core provides suggested modifications to increase consistency with the new occupational therapy paradigm.

In this book, leading experts from across the common law world assess the impact of four seminal House of Lords judgments decided in the 1960s: *Ridge v Baldwin*, *Padfield v Minister of Agriculture*, *Conway v Rimmer*, and *Anisminic v Foreign Compensation Commission*. The 'Quartet' is generally acknowledged to have marked a turning point in the development of court-centred administrative law, and can be understood as a 'formative moment' in the emergence of modern judicial review. These cases are examined not only in terms of the points each case decided, and their contribution to administrative law doctrine, but also in terms of the underlying conception of the tasks of administrative law implicit in the Quartet. By doing so, the book sheds new light on both the complex processes through which the modern system of judicial review emerged and the constitutional choices that are implicit in its jurisprudence. It further reflects upon the implications of these historical processes for how the achievements, failings and limitations of the common law in reviewing actions of the executive can be evaluated.
