**The Delta Model** Longman Publishing Group  
 This book discusses what constitutes vocational education as well as its key purposes, objects, formation and practices. In short, it seeks to outline and elaborate the nature of the project of vocational education. It addresses a significant gap in the available literature by providing a single text that elaborates the scope and diversity of the sector, its key objectives (i.e. vocations and occupations), its formation and development as an education sector, and the scope of its purposes and considerations in the curriculum. The volume achieves these objectives by discussing and defining the concept of vocational education as being that form of education that seeks to advise individuals about, prepare them for, and further develop their capacities to perform the kinds of occupations that societies require and individuals need to participate in—and through which they often come to define themselves. In particular, it discusses the distinctions between occupations as a largely social fact and vocations as being a socially shaped outcome assented to by individuals. As people

identify closely with the kinds of occupations they engage in, the standing of, and the effectiveness of vocational education is central to individuals' well-being, competence and progress.

Ultimately, this book argues that the provision of vocational education needs to realise important personal and social goals. **Teaching Science Through Discovery** Oxford University Press

This volume outlines the assumptions and beliefs that distinguish the concept of the reflective teacher from the view of the teacher as passive and a mere technician -- a view that teacher education programs and schools have historically promoted. The authors demonstrate how various conceptions of reflective teaching differ from one another. They believe that it is only through teachers' reflections on their own teaching that they become more skilled, more capable, and in general better teachers. This is the first volume in the "Reflective Teaching and the Social Conditions of Schooling" series. The major goal of both this book and of all of the volumes to follow in this series is to help teachers explore and define their own positions with regard to the topics and issues at hand within the context of the aims of education in a democratic society.

Jim Popham's widely popular Classroom Assessment shows teachers how to use classroom testing skillfully and formatively to dramatically increase their teaching effectiveness and make a difference in how well students learn. As in past editions, the author pays particular attention to the instructional payoffs of well-designed classroom tests and highlights the implications of testing on teaching throughout in special *But What Does This Have to Do with Teaching?* sections in each chapter. Decision Time vignettes present practical classroom problems and show readers actual decisions being made. Parent Talk features describe situations in which a teacher needs to explain something about assessment to parents and show what the author would say in that situation. And a lighter tone is established with cartoons to which readers can relate. The new Eighth Edition highlights the increasing importance of educational assessment in an era of common core state standards and teacher evaluations based on students' tests scores, incorporates the Standards for Educational and Psychological testing guidelines throughout relevant sections, and includes a new section on instructionally diagnostic tests to help readers evaluate the merits of commercial or locally developed diagnostic assessment. Strategy is the most central issue in management. It has to do with defining the purpose of an organization, understanding the market in which it operates and the capabilities the firm possesses, and putting together a winning plan. There are many influential frameworks to help managers undertake a systematic reflection on this issue. The most dominant approaches are Michael Porter's "Competitive Strategy" and the "Resource-Based View of the Firm," popularized by Gary Hamel and C.K. Prahalad. Arnoldo Hax argues there are fundamental drawbacks in the underlying hypotheses of these approaches in that they define strategy as a way to achieve sustainable competitive advantage. This line of thinking could be extremely dangerous because it puts the competitor at the center and therefore anchors you in the past, establishes success as a way of beating your competitors, and this obsession often leads toward imitation and congruency. The result is commoditization - which is the worst outcome that could possibly happen to a business. The Delta Model is an extremely innovative view of strategy. It abandons all of these assumptions and instead puts the customer at the center. By doing that it allows us to be truly creative, separating ourselves from the herd in pursuit of a unique and differentiated customer value proposition. Many years of intense research at MIT, supported by an extensive consulting practice, have resulted in development of powerful new concepts and practical tools to guide organizational leaders into a completely different way of looking at strategy, including a new way of doing customer segmentation and examining the competencies of the firm, with an emphasis on using the extended enterprise as a primary way of serving the customer. This last concept means that we cannot play the game alone; that we need to establish a network among suppliers, the firm, the customers, and complementors - firms that are in the business of developing products and services that enhance our own offering to the customer. Illustrated through dozens of examples, and discussion of application to small and medium-sized businesses and not-for-profits, the Delta Model will help readers in all types of organizations break out of old patterns of behavior and achieve strategic flexibility -- an especially timely talent during times of crisis, intense competition, and rapid change.

With contributions from Linda Darling-Hammond, Michael Fullan, Pasi Sahlberg, and Martin Carnoy, *Global Education Reform* is an eye-opening analysis of national educational reforms and the types of high-achieving systems needed to serve all students equitably. The collection documents the ideologically and educationally distinctive approaches countries around the world have taken to structuring their education systems. Focusing on three pairs of case studies written by internationally acclaimed experts, the book provides a powerful analysis of the different ends of an ideological spectrum—from strong state investments in public education to market-based approaches. An introductory chapter offers an overview of the theories guiding both neoliberal reforms such as those implemented in Chile, Sweden and the United States with efforts to build strong and equitable public education systems as exemplified by Cuba, Finland and Canada. The pairs of case studies that follow examine the historical evolution of education within an individual country and compare and contrast national educational outcomes. A concluding chapter dissects the educational outcomes of the differing economic and governance approaches, as well as the policy implications.
