Stroke is a medical emergency that requires immediate medical attention. With active and efficient nursing management in the initial hours after stroke onset and throughout subsequent care, effective recovery and rehabilitation is increased. Acute Stroke Nursing provides an evidence-based, practical text facilitating the provision of optimal stroke care during the primary prevention, acute and continuing care phases. This timely and comprehensive text is structured to follow the acute stroke pathway experienced by patients. It explores the causes, symptoms and effects of stroke, and provides guidance on issues such as nutrition, continence, positioning, mobility and carer support. The text also considers rehabilitation, discharge planning, palliative care and the role of the nurse within the multi-professional team. Acute Stroke Nursing is the definitive reference on acute stroke for all nurses and healthcare professionals wishing to extend their knowledge of stroke nursing. Evidence-based and practical in style, with case studies and practice examples throughout Edited and authored by recognised stroke nursing experts, clinicians and leaders in the field of nursing practice, research and education The first text to explore stroke management from UK and international perspectives, and with a nursing focus *Research Awards Index* Elsevier Health Sciences - Highlighted skills - cross references to the Clinical Skills chapter throughout text - Over 30 new case studies - Patient journey from pre-hospital and emergency-specific case studies - Critical thinking questions at the end of chapters - Chapter 35 Obstetric emergencies now includes 'Supporting a normal birth'. Principles of Rehabilitation Medicine Elsevier Health Sciences Prepare athletic trainers to provide emergency treatment for

acute sports-related injuries and illnesses in children, adolescents, and adults—on and off the field. Noted practitioners and educators address all aspects of the evaluation and management of the full-range of medical problems that may be encountered. From emergency evaluation and airway management through the major categories of injury, this timely text meets a critical need in the classroom and in practice.

Acute Stroke Nursing National Academies Press

This book was written by twenty-nine professionals with the often unwilling cooperation of 357 Alaskan sea otters -- the most photogenic and probably the most vulnerable of the mammalian victims of the 1989 Exxon Valdez oil spill. It is divided into three sections covering a broad range of concerns, from how best to capture a sea otter, through tests and suggested treatments, to considerations governing release of rehabilitated animals. Experts also discuss facility design, volunteer training, and personnel safety issues. Although its contents are useful for a variety of people from policymakers to veterinarians, *Emergency Care and Rehabilitation of Oiled Sea Otters* aims chiefly at helping rehabilitators, representatives of the oil industry, and government agents conduct successful rehabilitation efforts. The book contains the best available information on the subject; nothing else even comes close.

Small Animal Emergency Care. Quick Reference Guide Routledge

A concise, expertly written overview of physical medicine and rehabilitation—from leaders in the field A Doody's Core Title for 2022 & 2024! *Principles of Rehabilitation Medicine* is comprehensive and authoritative review for the specialty of Physical Medicine and Rehabilitation. The book offers a wide array of chapters with complete reviews of classical rehabilitation topics such as brain injury, spinal cord injury, stroke, pain management and electrodiagnostic medicine. Additionally, there is in-depth coverage of musculoskeletal medicine, pediatric rehabilitation and sports. An expansive first section reviews fundamental

knowledge essential to the basic rehabilitation assessment.

Chapters reflect cutting edge topics in the field such as:

Regenerative medicine Rehabilitation of the veteran

Rehabilitation of the polytrauma patient Hand rehabilitation Ethics

Rehabilitation in pregnancy Sexual rehabilitation Rehabilitation of

the injured worker Rehabilitation issues in the developing world

Rehabilitation at the end of life Chapters are authored by proven

leaders in the field with a focus on pathophysiology, diagnosis

and rehabilitative management. Information is presented in a

clear, concise manner, with direct patient applications. The text is

complemented by numerous figures, tables and patient care

algorithms which are designed to confer a basic understanding of

principles.

Emergency Care in Athletic Training [Fairbanks, AK] :

University of Alaska Press

Nursing knowledge and practice is a comprehensive textbook which forms an ideal basis for foundation nursing students. The core emphasis in the organisation and presentation of knowledge in this third edition remains focused on the in-depth knowledge required by nurses to deliver care in the practice setting. The chapter contents encompass knowledge that applies to all branches of nursing e.g. Communication, Confusion, Aggression and Rehabilitation Safety and Risk, Infection Control, Medicines etc. The structure of all chapters is unique in integrating knowledge from subject areas often taught separately in the nursing curriculum. This enables the foundation student to integrate this range of knowledge in making decisions about the delivery of nursing care to patients/clients in all fields of nursing. Exercises are included to encourage reflection on practice and develop critical thinking skills. It also promotes the expansion of professional knowledge through the development of portfolio evidence. Building on the outstanding success of previous editions the authors have drawn extensively on current best evidence, including research, policy and substantial internet based resources, reflecting UK and international perspectives. • Each

chapter begins with an overview of the content and concludes with a summary to help evaluate learning • Case studies reflect the diverse range of client needs and care settings of the four nursing branches and help relate theory to practice • Reflective exercises and suggestions for portfolio evidence, along with decision-making activities, promote reflection on personal experience and links to nursing practice using a problem-based approach • Current research is highlighted throughout, demonstrating the evidence-base for practice decisions. • Key web sites, annotated further reading and references encourage readers to pursue contemporary evidence that underpins competency-based practice. Full colour throughout Content fully updated in line with developments in clinical practice, teaching requirements and the evidence-base Free electronic ancillaries on Evolve enhance the knowledge provided in each chapter with additional information, exercises and resources An introductory chapter on 'Nursing Knowledge and Practice' explores the role and context of nursing, nationally and internationally, providing foundation information on core knowledge areas common to all nursing curricula.

Emergency Nursing Core Curriculum OECD Publishing

How can we meet the special needs of children for emergency medical services (EMS) when today's EMS systems are often unprepared for the challenge? This comprehensive overview of EMS for children (EMS-C) provides an answer by presenting a vision for tomorrow's EMS-C system and practical recommendations for attaining it. Drawing on many studies and examples, the volume explores why emergency care for children "from infants through adolescents" must differ from that for adults and describes what seriously ill or injured children generally experience in today's EMS systems. The book points the way to integrating EMS-C into current emergency programs and into broader aspects of health care for children. It gives recommendations for ensuring access to emergency care through the 9-1-1 system; training health professionals, from paramedics to physicians; educating the public; providing proper equipment, protocols, and referral systems; improving communications among EMS-C providers; enhancing data resources and expanding research efforts; and stimulating and supporting leadership in EMS-C at the federal and state levels. For those already deeply involved in EMS efforts, this volume is a

convenient, up-to-date, and comprehensive source of information and ideas. More importantly, for anyone interested in improving the emergency services available to children "emergency care professionals from emergency medical technicians to nurses to physicians, hospital and EMS administrators, public officials, health educators, children's advocacy groups, concerned parents and other responsible adults" this timely volume provides a realistic plan for action to link EMS-C system components into a workable structure that will better serve all of the nation's children.

Emergency Care World Bank Publications

Selected for Doody's Core Titles® 2024 in Emergency Care
Written by emergency nurses for emergency nurses, Sheehy's *Emergency Nursing: Principles and Practice*, 7th Edition covers the issues and procedures unique to the emergency department. This comprehensive, evidence-based resource is written by the Emergency Nurses Association and includes developments and changes in clinical practice that are incorporated throughout the text. Considered the go-to guide for issues and procedures unique to the emergency department, the user-friendly format features more than 150 high-quality illustrations and tables that highlight essential concepts and offer quick access to vital information. New to this edition is updated key coverage including clinical fundamentals, treatment for trauma and medical-surgical emergencies, the foundations of emergency nursing practice, special populations, and more! - Written by the Emergency Nurses Association, ensuring this is the most accurate information on the market. - Most comprehensive and authoritative text available on emergency nursing. - Logically organized, chapters are grouped into six sections for quick access to important content: Foundations of Emergency Nursing, Professional Practice, Clinical Foundations of Emergency Nursing, Major Trauma Emergencies, Medical and Surgical Emergencies, and Special Patient Populations. - Tables and boxes highlight and summarize critical and essential information, while 150 illustrations help you to quickly identify and treat frequently encountered conditions. - A separate unit on special patient populations covers topics such as child abuse, elder abuse, intimate partner violence, sexual assault, substance abuse and behavioral/pediatric/obstetrical emergencies. - NEW! Coverage includes the latest on topical issues such as ethics, workplace violence, and geriatric trauma. -

UPDATED pain guidelines feature the latest pain indicators. -
UPDATED sepsis guidelines provide essential information on pathophysiology and diagnosis, with valuable guidelines for managing these patients. - NEW! Fully revised information on communicable diseases. - UPDATED Information on non-narcotic use for treatment of pain and increasing rates of addiction. - NEW! Discussion of transgender patients covers how to work with this unique population. - NEW! Full color photo insert
Report of the Activities National Academies Press
The foundation for EMS education was established in 1971 when the American Academy of Orthopaedic Surgeons (AAOS) authored the first emergency medical technician textbook. Since then, the AAOS has set the gold standard for EMS training programs with the Orange Book Series. This Second Edition, based on *Intermediate Emergency Care and Transportation of the Sick and Injured*, raises the bar even higher with world-class medical content and innovative instructional resources that meet the diverse needs of today's educators and students. Based on the new National EMS Education Standards for Advanced Emergency Medical Technician, the Second Edition offers complete coverage of every competency statement with clarity and precision in a concise format that ensures student comprehension and encourages critical thinking. New cognitive and didactic material is presented, along with new skills and features, to create an innovative AEMT training solution. Topics including advanced pathophysiology, acid-base balance, fluids and electrolytes, intravenous therapy, intraosseous access, blood glucose monitoring, and administration of AEMT-level medications tailor this textbook to the new Advanced EMT level. Additional online skills allow this textbook to be customized for every AEMT training program's unique needs. Current, State-of-the-Art Medical Content
Advanced Emergency Care and Transportation of the Sick and Injured, Second Edition incorporates up-to-date, evidence-based medical concepts to ensure that students are taught assessment and treatment modalities that will help patients in the field today. *Advanced Pathophysiology*
Advanced Emergency Care and Transportation of the Sick and Injured, Second Edition provides a solid foundation in pathophysiology--one of the key knowledge areas required to become a successful Advanced EMT. *Patient Assessment*
This Second Edition teaches and reinforces the concept of Patient Assessment with a single,

comprehensive chapter, ensuring that students understand patient assessment as a single, integrated process--the way that providers actually practice it in the field. Each medical and trauma chapter reinforces the patient assessment process by highlighting the unique aspects of the illness or injury. Clear Application to Real-World EMSThrough evolving patient case studies in each chapter, the Second Edition offers students a genuine context for the application of the knowledge presented in the chapter. This approach makes it clear how all of the information will be used to help patients in the field.

Improving Healthcare Quality in Europe Characteristics, Effectiveness and Implementation of Different Strategies Elsevier Health Sciences

This open access book outlines the challenges of supporting the health and wellbeing of older adults around the world and offers examples of solutions designed by stakeholders, healthcare providers, and public, private and nonprofit organizations in the United States. The solutions presented address challenges including: providing person-centered long-term care, making palliative care accessible in all healthcare settings and the home, enabling aging-in-place, financing long-term care, improving care coordination and access to care, delivering hospital-level and emergency care in the home and retirement community settings, merging health and social care, supporting people living with dementia and their caregivers, creating communities and employment opportunities that are accessible and welcoming to those of all ages and abilities, and combating the stigma of aging. The innovative programs of support and care in Aging Well serve as models of excellence that, when put into action, move health spending toward a sustainable path and greatly contribute to the well-being of older adults.

Nursing Knowledge and Practice E-Book Human Kinetics Publishers

As the first of the nation's 78 million baby boomers begin reaching age 65 in 2011, they will face a health care workforce that is too small and woefully unprepared to meet their specific health needs. Retooling for an Aging America calls for bold initiatives starting immediately to train all health care providers in the basics of geriatric care and to prepare family members and other informal caregivers, who currently receive little or no training in how to tend to their aging loved ones. The book also

recommends that Medicare, Medicaid, and other health plans pay higher rates to boost recruitment and retention of geriatric specialists and care aides. Educators and health professional groups can use Retooling for an Aging America to institute or increase formal education and training in geriatrics. Consumer groups can use the book to advocate for improving the care for older adults. Health care professional and occupational groups can use it to improve the quality of health care jobs.

Emergency Care and Rehabilitation of Oiled Sea Otters National Academies Press

Children represent a special challenge for emergency care providers, because they have unique medical needs in comparison to adults. For decades, policy makers and providers have recognized the special needs of children, but the system has been slow to develop an adequate response to their needs. This is in part due to inadequacies within the broader emergency care system. *Emergency Care for Children* examines the challenges associated with the provision of emergency services to children and families and evaluates progress since the publication of the Institute of Medicine report *Emergency Medical Services for Children* (1993), the first comprehensive look at pediatric emergency care in the United States. This new book offers an analysis of: • The role of pediatric emergency services as an integrated component of the overall health system. • System-wide pediatric emergency care planning, preparedness, coordination, and funding. • Pediatric training in professional education. • Research in pediatric emergency care. *Emergency Care for Children* is one of three books in the *Future of Emergency Care* series. This book will be of particular interest to emergency health care providers, professional organizations, and policy makers looking to address the pediatric deficiencies within their emergency care systems.

Disease Control Priorities in Developing Countries World Health Organization

This volume, developed by the Observatory together with OECD, provides an overall conceptual framework for understanding and applying strategies aimed at improving quality of care. Crucially, it summarizes available evidence on different quality strategies and provides recommendations for their implementation. This book is intended to help policy-makers to understand concepts of quality and to support them to evaluate single strategies and

combinations of strategies.

Emergency Care for Children National Academies Press

Developed collaboratively by WHO, including the WHO Global Alliance for Care of the Injured, and the Global Alliance of NGOs for Road Safety, this guide clearly defines the role that nongovernmental organizations can have in advocating on behalf of people who need emergency care, including those injured in road traffic crashes. From reviewing the current state of emergency care services in a country to using social media to share information, encourage debate and create a community of supporters, the guide offers step-by-step actions for more effective and impactful advocacy. Especially targeted towards nongovernmental organizations that operate with limited resources, the guide features a series of case studies from around the world and links to useful resources. While those affected by injuries and other health emergencies have a range of physical, psychological and legal needs, this publication is focused on advocacy for the time-sensitive health care that can save millions of lives every year.

Emergency Care John Wiley & Sons

The 4th edition of the globally bestselling *Chirurgie de la Main* is made available to the English-speaking population for the first time in *Emergency Surgery of the Hand*. The text synthesizes the most current knowledge in hand surgery, emergency, and surgical principles for today's surgeons and fellows. Edited by internationally recognized experts Michel Merle and Gilles Dautel, *Emergency Surgery of the Hand* includes an abundance of illustrations, photographs, and step-by-step descriptions to ensure the best possible outcomes for each unique patient scenario. - Provides coverage of today's hot topics in hand surgery, including free tissue transfer and pedicle flaps, as well as emergency care of infections. - Prioritizes surgical techniques that allow rapid return to work. - Covers the latest information on surgical principles, relevant anatomy and physiology, surgical techniques, outcomes and rehabilitation. - Step-by-step descriptions of surgical procedures are enhanced by crisp, clear surgical photographs and illustrations.

Abstracts of Active Projects Elsevier Health Sciences

For more than a decade, *Sports Emergency Care: A Team Approach* has filled a void in athletic training education on the subject of emergency care. Now, this updated Third Edition

continues to pave the way to prepare athletic training students beyond traditional first aid training as well as providing specific information on emergency situations in sports for emergency medical services (EMS) professionals. In this updated Third Edition, Dr. Robb S. Rehberg and Dr. Jeff G. Konin, along with their 13 contributors, have created a resource that can be used in athletic training education programs as a core text in a sports emergency care course; a supplemental text in several courses that address immediate care within an athletic training education curriculum; and it can be used by EMS educators in developing continuing education programs for prehospital providers. Some of the topics included in the Third Edition: Assessment of Sports Emergencies Cardiovascular Emergencies Management of Traumatic Brain Injury Fractures and Soft Tissue Injuries Managing Mental Health Emergencies Care of Athletes with Disabilities Emergencies in Sports for the Aging Athlete Regardless of discipline, it is important for all health care providers caring for ill or injured athletes to be knowledgeable and proficient in managing sports emergencies. This ability can only be achieved through preparation and practice, and Sports Emergency Care: A Team Approach, Third Edition continues to be a groundbreaking text that gives access to the essential resources health care providers need to address sports emergencies. This includes but is not limited to athletic trainers, emergency medical technicians and paramedics, and physicians. From the Foreword: "Emergencies can occur anytime and

anywhere in sports, including at a practice or on the bus traveling to an event. After nearly 40 years as a professional sports athletic trainer, these emergency moments give me pause. Preparation is the key to successful outcomes in all emergencies." --Ronnie P. Barnes, MS, ATC Senior Vice President, Medical Services Head Athletic Trainer New York Football Giants

Acute and Emergency Care in Athletic Training Jones & Bartlett Publishers

Quick reference guide based on the protocol of primary assessment and the most frequent pathologies in each section. The goal of the work is to put within reach of veterinarians a small book including essential information that they can always keep handy in order to make the consultation time more profitable, especially in the stressful moments of the emergency clinic.

Essential Procedures for Practitioners in Emergency, Urgent, and Primary Care Settings World Health Organization includes: --

Current Emergency Diagnosis & Treatment Springer Publishing Company

For courses in Rescue Techniques and EMT basics. This Fire Service Edition of Emergency Care continues a tradition of publishing excellence and builds upon a 30 year history of preparing more students to pass state competency exams and/or the National Registry Exam than any other text on the market. It focuses on the unique situations in which fire professionals work-- with well-organized, clearly presented content, thorough

coverage of patient assessment, an accessible reading level, high quality artwork, and outstanding skill scans of equipment and procedures. Case studies and practical tips from the field tie chapter concepts to real world applications. Each chapter sends students to the Companion Website where there are links to EMS-related sites. A multimedia support package provides extra information to help students master concepts.

Special Report McGraw Hill Professional
Developed by WHO and the International Committee of the Red Cross, in collaboration with the International Federation for Emergency Medicine, "Basic Emergency Care (BEC): Approach to the acutely ill and injured" is an open-access training course for frontline healthcare providers who manage acute illness and injury with limited resources. BEC teaches a systematic approach to the initial assessment and management of time-sensitive conditions where early intervention saves lives. It includes modules on: the ABCDE and SAMPLE history approach, trauma, difficulty in breathing, shock, and altered mental status. The practical skills section covers the essential time-sensitive interventions for these key acute presentations. The BEC package includes a Participant Workbook and electronic slide decks for each module. BEC integrates the guidance from WHO Emergency Triage, Assessment and Treatment (ETAT) for children, WHO Pocket Book of Hospital Care for Children, WHO Integrated Management of Pregnancy and Childbirth and the Integrated Management of Adult/Adolescent Illness (IMAI).
