can be provided by using only techniques and procedures.
Primarily a descriptive interpretation of the Opinions and
Standards issued by the Accounting Principles Board and the
Financial Accounting Standards Board. It is descriptive of existing

accounting theory--exploring it in depth--while critically
examining alternatives to current practice. Through the use of
research articles at the end of each chapter and supplemental
readings, which provide additional discussion of complex material
or a dissenting opinion from current generally accepted
accounting principles, it also helps readers evaluate the
conclusions reached by the APB and FASB.

Behavioral finance presented in this book is the second-generation of behavioral finance. The first generation, starting in the early 1980s, largely accepted standard finance's notion of people's wants as "rational" wants—restricted to the utilitarian benefits of high returns and low risk. That first generation commonly described people as "irrational"—succumbing to cognitive and emotional errors and misled on their way to their rational wants. The second generation describes people as normal. It begins by acknowledging the full range of people's normal wants and their benefits—utilitarian, expressive, and emotional—distinguishes normal wants from errors, and offers guidance on using shortcuts and avoiding errors on the way to satisfying normal wants. People's normal wants include financial security, nurturing children and families, gaining high social status, and staying true to values. People's normal wants, even

more than their cognitive and emotional shortcuts and errors, underlie answers to important questions of finance, including saving and spending, portfolio construction, asset pricing, and market efficiency.
