KALEB JADA

Computer Fundamentals and Information Technology Laxmi Publications, Ltd.

The sixth edition of the highly acclaimed "Fundamentals of Computers" lucidly presents how a computer system functions. Both hardware and software aspects of computers are covered. The book begins with how numeric and character data are represented in a computer, how various input and output units function, how different types of memory units are organized, and how data is processed by the processor. The interconnection and communication between the I/O units, the memory, and the processor is explained clearly and concisely. Software concepts such as programming languages, operating systems, and communication protocols are discussed. With growing use of wireless to access computer networks, cellular wireless communication systems, WiFi (Wireless high fidelity), and WiMAX have become important. Thus it has now become part of "fundamental knowledge" of computers and has been included. Besides this, use of computers in multimedia processing has become commonplace and hence is discussed. With the increase in speed of networks and consequently the Internet, new computing environments such as peer to peer, grid, and cloud computing have emerged and will change the future of computing. Hence a new chapter on this topic has been included in this edition. This book is an ideal text for undergraduate and postgraduate students of Computer Applications (BCA and MCA), undergraduate students of engineering and computer science who study fundamentals of computers as a core course, and students of management who should all know the basics of computer hardware and software. It is ideally suited for working professionals who want to update their knowledge of fundamentals of computers. Key features

- Fully updated retaining the style and all contents of the fifth edition.
- In-depth discussion of both wired and wireless computer networks.
- Extensive discussion of analog and digital communications.
- Advanced topics such as multiprogramming, virtual memory, DMA, RISC, DSP, RFID, Smart Cards, WiGig, GSM, CDMA, novel I/O devices, and multimedia compression (MP3, MPEG) are described from first principles.
- A new chapter on Emerging Computing Environments, namely, peer to peer, grid, and cloud computing, has been added for the first time in an entry level book.
- Each chapter begins with learning goals and ends with a summary to aid self-study.
- Includes an updated glossary of over 340 technical terms used in the book.

This book is designed to provide a solid introduction to the basics of C programming, and demonstrate C's power and flexibility in writing compact and efficient programs not only for information processing but also for high-level computations. It is an ideal text for the students of Computer Applications (BCA/MCA), Computer Science (B.Sc./M.Sc.), Computer Science and Engineering (B.E./B.Tech), Information Technology (B.E./B.Tech.) as well as for the students pursuing

courses in other engineering disciplines, both at the degree and diploma levels, possessing little or no programming experience. The book presents a comprehensive treatment of the language, highlighting its key features and illustrating effective programming techniques by examples. The basic programming concepts such as data types, input and output statements, looping statements, etc. are clearly explained in a simplified manner. The advanced techniques such as functions, pointers and files are discussed thoroughly. One of the key topics, Data Structures, is explained in detail with diagrammatic representations and well-written programs. The linked list, the heart of the data structure part, is very well illustrated. The final part of the book contains a collection of solved programs to reinforce the understanding of the concepts of the C language.

This book covers Kannur university BCA first year student's subject, General Awareness 1:

Informatics for Computer Applications. This book is presented in simple and easily understandable manner. This book, we hope will be very useful for all first year BCA students for theory examinations of Computer Application department. we have made a humble attempt in this book to support students to pass the theory exams. End of each chapter, we have added previous year questions with answers. Additionally added machine learning based concepts with codes, we hope that, it may be helpful for them in their final year projects. The book is structured to cover the key aspects of major topics in the subject. It is specially designed to meet the expectations of Kannur University, Kerala. Unit 1: Concept of Hardware and Software: Computer Languages - Machine Language, Assembly Language, High Level Language, Language translators: Compiler, Interpreter, Assembler, Features of good Language. Unit 2: Basic Computer Organization: Von Neumann model, Input Unit, Output Unit, Storage Unit, Control Unit, Memory hierarchy, RAM, ROM, PROM and EPROM, cache memory and registers. Secondary storage devices, Storage capacity: Bit, Byte, Nibble. Unit 3: Introducing Input output devices with examples. Introduction to operating System: need of OS, Types of OS Functions of OS (introduction only). Introduction to Computer Networks: definition and applications. Unit 4: Introduction to Linux: Basic commands in Linux such as listing files, viewing contents in files, creating and deleting directories, moving and copying files and/or directories, man pages, setting permissions on files/ directories and vi editor. Steps to install Linux OS. Unit 5: IT & Society - issues and concerns- digital divide, IT & development, free software movement, cyber ethics, cybercrime, cyber threats, cyber Security, privacy issues, cyber laws, cyber addictions, guide lines for proper usage of computer, internet and mobile phones.

The book is written in such a way that learners without any background in programming are able to follow and understand it entirely. It discusses the concepts of Java in a simple and straightforward

language with a clear cut explanation, without beating around the bush. On reading the book, readers are able to write simple programs on their own, as this is the first requirement to become a Java Programmer. The book provides ample solved programs which could be used by the students not only in their examinations but also to remove the fear of programming from their minds. After reading the book, the students gain the confidence to apply for a software development company, face the interview board and come out successful. The book covers sample interview questions which were asked in various interviews. It helps students to prepare for their future careers.

Designed as a text for the students of computer science, computer applications, all branches of engineering, and also for those pursuing courses in ICT (Information Communication Technology) related subjects, this book is suitable for anyone new to programming in C. It teaches the readers all about C—introduces the basic programming concepts, how to program, then moves on to a thorough discussion of advanced techniques and features of C. Though a new title, it is a completely reorganized, thoroughly revised and fully updated version of the author's earlier book Programming in C. Highly practical in nature, the text is enriched throughout with numerous worked-out examples to help the reader grasp the application of the concepts discussed. Each chapter concludes with a section 'Test Yourself' (with answers) that provides students with an opportunity to solve plenty of interesting problems and coding assignments. Besides the book offers the following special features in three separate sections to help students build competence in programming and to prepare them to attempt solutions to real-life assignments. □ 75 Solved Programs □ 120 Multiple Choice Questions □ 88 Confidence Building Programs
