The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Design Governance focuses on how we design the built environment where most of us live, work,

and play and the role of government in that process. To do so, it draws on the experience of the Commission for Architecture and the Built Environment (CABE), a decade-long, globally unique experiment in the governance of design. This book theorises design governance as an arm and aspiration of the state; tells the story of CABE, warts and all, and what came before and after; unpacks CABE's 'informal' toolbox: its methods and processes of design governance; and reflects on the effectiveness and legitimacy of design as a tool of modern-day government. The result is a new set of concepts through which to understand the governance of design as a distinct and important sub-field of urban design.

This report examines the reasons why people are unlikely to stay in work; the contribution which education is making to improving employability; and whether employment programmes reflect the needs of business and local markets. Although the UK has high employment levels, many people have difficulty staying in work. Of the 2.4 million Jobseeker's Allowance claims made each year over two-thirds are repeat claims. The Department for Work and Pensions (DWP) and the Department for Innovation, Universities and Skills have been slow to develop suitable shared objectives and targets for sustained employment. The DWP has used 13 weeks in work as a yardstick for sustained employment, but it now accepts that this measure is too short. The Government has set targets to be achieved by 2020: 95 per cent of adults to achieve functional literacy and numeracy skills (the levels needed to get by in life and at work) and 90 per cent to achieve a first full Level 2 qualification (equivalent to 5 GCSEs at grades A*-C). The Departments hope to achieve these goals by introducing skills screening for benefits recipients, relaxing rules that restrict access to training provision for people on benefits, promoting better integration and take-up of pre-work and in-work training, increasing government funding for basic skills training, and launching a new Skills Account to give adult learners greater choice and control over learning. Through Skills Accounts, learners will be able to purchase, using public money, relevant learning at an accredited, quality assured provider of their choice. Around a third of employers do not invest in training, although the number of employers who say that they are training their staff has increased slightly. People with the lowest skills are the least likely to be trained by their employers.

Principles of Management is designed to meet the scope and sequence requirements of the introductory course on management. This is a traditional approach to management using the leading, planning, organizing, and controlling approach. Management is a broad business discipline, and the Principles of Management course covers many management areas such as human resource management and strategic management, as well behavioral areas such as motivation. No one individual can be an expert in all areas of management, so an additional benefit of this text is that specialists in a variety of areas have authored individual chapters.

The first comprehensive history of the DREAM Act and Deferred Action for Childhood Arrivals (DACA) In 1982, the Supreme Court of the United States ruled in Plyler v. Doe that undocumented children had the right to attend public schools without charge or impediment, regardless of their immigration status. The ruling raised a question: what if undocumented students, after graduating from the

public school system, wanted to attend college? Perchance to DREAM is the first comprehensive history of the DREAM Act, which made its initial congressional appearance in 2001, and Deferred Action for Childhood Arrivals (DACA), the discretionary program established by President Obama in 2012 out of Congressional failure to enact comprehensive immigration reform. Michael A. Olivas relates the history of the DREAM Act and DACA over the course of two decades. With the Trump Administration challenging the legality of DACA and pursuing its elimination in 2017, the fate of DACA is uncertain. Perchance to DREAM follows the political participation of DREAMers, who have been taken hostage as pawns in a cruel game as the White House continues to advocate anti-immigrant policies. Perchance to DREAM brings to light the many twists and turns that the legislation has taken, suggests why it has not gained the required traction, and offers hopeful pathways that could turn this darkness to dawn.

Making Education Work for the Poor identifies wealth inequality as the gravest threat to the endangered American Dream. Though studies have clearly illustrated that education is the primary path to upward mobility, today, educational outcomes are more directly determined by wealth than innate ability and exerted effort. This accounting directly contradicts Americans' understanding of the promise the American Dream is supposed to offer: a level playing field and a path towards a more profitable future. In this book, the authors share their own stories of their journeys through the unequal U.S. education system. One started from relative privilege and had her way to prosperity paved and her individual efforts augmented by institutional and structural support. The other grew up in poverty and had to fight against currents to complete higher education, only to find his ability to profit from that degree compromised by student debt. To directly counter wealth inequality and make education the 'great equalizer' that Americans believe it to be, this book calls for a revolution in financial aid policy, from debt dependence to asset empowerment. The book examines the evidence base supporting Children's Savings Accounts, including CSAs' demonstrated potential to improve children's outcomes all along the 'opportunity pipeline': early education, school achievement, college access and completion, and post-college financial health. It then outlines a policy that builds on CSAs to incorporate a sizable, progressive wealth transfer. This new policy, Opportunity Investment Accounts, is framed as the cornerstone of the wealth-building agenda the nation needs in order to salvage the American Dream. Written by leading CSA researchers, the book includes overviews of the major children's savings legislation proposed in Congress and the key features of prominent CSA programs in operation around the country today, as well as new qualitative and quantitative CSA research. The book ultimately presents a critical development of the theories that, together, explain how universal, progressive, asset-based education financing could make education work equitably for all American children.

How do education systems shape educational inequalities and differences in educational outcomes? And how do advantages and disadvantages in educational attainment translate into privileges and shortcomings in labour market and general life chances? The present volume examines the relationship between second language practice and what is known about the process of second language acquisition, summarising the current state of second language acquisition theory, drawing general conclusions about its application to methods and materials and describing what characteristics effective materials should have. The author concludes that a solution to language teaching lies not so much in expensive equipment, exotic new methods,

or sophisticated language analysis, but rather in the full utilisation of the most important resources - native speakers of the language - in real communication.
