HAYNES LIVIA

Le Deuxième Sexe Artech House

Life sometimes seems illogical. Individuals do strange things: take drugs, have unprotected sex, mug each other. Love seems irrational, and so does divorce. On a larger scale, life seems no fairer or easier to fathom: Why do some neighborhoods thrive and others become ghettos? Why is racism so persistent? Why is your idiot boss paid a fortune for sitting behind a mahogany altar? Thorny questions—and you might be surprised to hear the answers coming from an economist. But award-winning journalist Tim Harford likes to spring surprises. In this deftly reasoned book, he argues that life is logical after all. Under the surface of everyday insanity, hidden incentives are at work, and Harford shows these incentives emerging in the most unlikely places.

The Curious Lore of Precious Stones Alfred Music

Radu, an electrical engineer who works as a consultant for payment systems and telecom operations in Belgium, has written a thorough description of EMV chip card technology. Following a description of chip migration with EMV and its use for debit and credit cards, Radu details the processing of such cards, including remote card payments, with attention to various formats. A lengthy section of appendices details the technology's security

framework, threats, services, mechanisms, and risk management. Annotation copyrighted by Book News, Inc., Portland, OR

The EBay Price Guide Hal Leonard Corporation

Gillian Rose introduces the general themes and recent debates on the meaning of culture and the function of the visual in this introduction to interpreting the visual.

Dahlia Breeding for the Farmer-Florist and the Home Gardener Hyperion

This highly authoritative volume highlights the remarkable superfamily of molecular motors called myosins, which are involved in such diverse cellular functions as muscle contraction, intracellular transport, cell migration and cell division. In a timely compilation of chapters written by leading research groups that have made key discoveries in the field, the current understanding of the molecular mechanisms and biological functions of these intriguing proteins is explored.

The Independent Woman Random House Trade Paperbacks

“Like man, woman is a human being.” When *The Second Sex* was first published in Paris in 1949—groundbreaking, risqué, brilliantly written and strikingly modern—it provoked both outrage and inspiration. *The Independent Woman* contains three key chapters of Beauvoir’s masterwork, which illuminate the feminine condition and identify practical social reforms for gender equality. It captures the essence of the spirited manifesto that switched on light bulbs in the heads of a generation of women and continues to exert profound influence on feminists today.

* A proven best-seller by the most recognized Oracle expert in the world. * The best Oracle book ever written. It defines what Oracle really is, and why it is so powerful. * Inspired by the thousands of questions Tom has answered on his <http://asktom.oracle.com> site. It tackles the problems that developers and DBAs struggle with every day. * Provides everything you need to know to program correctly with the database and exploit its feature-set effectively.

Productive Christians in an Age of Guilt-manipulators SAGE

This contributed volume contains the research results of the Cluster of Excellence "Integrative Production Technology for High-Wage Countries", funded by the German Research Society (DFG). The approach to the topic is genuinely interdisciplinary, covering insights from fields such as engineering, material sciences, economics and social sciences. The book contains coherent deterministic models for integrative product creation chains as well as harmonized cybernetic models of production systems. The content is structured into five sections: Integrative Production Technology, Individualized Production, Virtual Production Systems, Integrated Technologies, Self-Optimizing Production Systems and Collaboration Productivity. The target audience primarily comprises research experts and practitioners in the field of production engineering, but the book may also be beneficial for graduate students.

The Routledge Encyclopedia of Translation Technology provides a state-of-the art survey of the field of computer-assisted translation. It is the first definitive reference to provide a comprehensive overview of the general, regional and topical aspects of this increasingly significant area of study. The Encyclopedia is divided into three parts: Part One presents general issues in translation technology, such as its history and development, translator training and various aspects of machine translation, including a valuable case study of its teaching at a major university; Part Two discusses national and regional developments in translation technology, offering contributions covering the crucial territories of China, Canada, France, Hong Kong, Japan, South Africa, Taiwan, the Netherlands and Belgium, the United Kingdom and the United States Part Three evaluates specific matters in translation technology, with entries focused on subjects such as alignment, bitext, computational lexicography, corpus, editing, online translation, subtitling and technology and translation management systems. The Routledge Encyclopedia of Translation Technology draws on the expertise of over fifty contributors from around the world and an international panel of consultant editors to provide a selection of articles on the most pertinent topics in the discipline. All the articles are self-contained, extensively cross-referenced, and include useful and up-to-date references and information for further reading. It will be an invaluable reference work for anyone with a professional or academic interest in the subject.

The heart-pounding history of how Pope Pius XII -- often labeled "Hitler's Pope" -- was in fact an anti-Nazi spymaster, plotting against the Third Reich during World War II. The Vatican's silence in the face of Nazi atrocities remains one of the great controversies of our time. History has accused wartime pontiff Pius the Twelfth of complicity in the Holocaust and dubbed him "Hitler's Pope." But a key part of the story has remained untold. Pope Pius in fact ran the world's largest church, smallest state, and oldest spy service. Sainly but secretive, he sent birthday cards to Hitler -- while secretly plotting to kill him. He skimmed from church charities to pay covert couriers, and surreptitiously tape-recorded his meetings with top Nazis. Under his leadership the Vatican spy ring actively plotted against the Third Reich. Told with heart-pounding suspense and drawing on secret transcripts and unsealed files by an acclaimed author, Church of Spies throws open the Vatican's doors to reveal some of the most astonishing events in the history of the papacy. Riebling reveals here how the world's greatest moral institution met the greatest moral crisis in history.

Church of Spies Greenwood

A groundbreaking collection of essays in feminist music criticism, this book addresses problems of gender and sexuality in repertoires ranging from the early seventeenth century to rock and performance art. ". . . this is a major book . . . [McClary's] achievement borders on the miraculous." The Village Voice "No one will read these essays without thinking about and hearing music in new and interesting ways. Exciting reading for adventurous students and staid professionals." Choice "Feminine Endings, a provocative 'sexual politics' of Western classical or art music, rocks conservative musicology at its core. No review can do justice to the wealth of ideas and possibilities [McClary's] book presents. All music-lovers should read it, and cheer." The Women's Review of Books "McClary writes with a racy, vigorous, and consistently entertaining style. . . . What she has to say specifically about the music and the text is sharp, accurate, and telling; she hears what takes place musically with unusual sensitivity." -The New York Review of Books

Dodge Genealogy Dalcassian Publishing Company

Focusing on comparative cognition in cephalopods, this book illuminates the wide range of mental function in this often overlooked group.

A plethora of different theories, models, and concepts make up the field of community ecology. Amid this vast body of work, is it possible to build one general theory of ecological communities? What other scientific areas might serve as a guiding framework? As it turns out, the core focus of community ecology—understanding patterns of diversity and composition of biological variants across space and time—is shared by evolutionary biology and its very coherent conceptual framework, population genetics theory. The Theory of Ecological Communities takes this as a starting point to pull together community ecology's various perspectives into a more unified whole. Mark Vellend builds a theory of ecological communities based on four overarching processes: selection among species, drift, dispersal, and speciation. These are analogues of the four central processes in population genetics theory—selection within species, drift, gene flow, and mutation—and together they subsume almost all of the many dozens of more specific models built to describe the dynamics of communities of interacting species. The result is a theory that allows the effects of many low-level processes, such as competition, facilitation, predation, disturbance, stress, succession, colonization, and local extinction to be understood as the underpinnings of high-level processes with widely applicable consequences for ecological communities. Reframing the numerous existing ideas in community ecology, The Theory of Ecological Communities provides a new way for thinking about biological composition and diversity.

(Music Sales America). In this book, the absolute beginner is introduced to the concept of MIDI by way of analogy with familiar technology. Myths relating to the dehumanization of music by computers are explored from both sides and information is introduced in a straightforward, logical order. With no confusing jargon mentioned, this guide is a must for beginners.

[Integrative Production Technology](#) Springer

This volume explains the key ideas, questions and methods involved in studying the hidden world of vibrational communication in animals. The authors dispel the notion that this form of communication is difficult to study and show how vibrational signaling is a key to social interactions in species that live in contact with a substrate, whether it be a grassy lawn, a rippling stream or a tropical forest canopy. This ancient and widespread form of social exchange is also remarkably understudied. A frontier in animal behavior, it offers unparalleled opportunities for discovery and for addressing general questions in communication and social evolution. In addition to reviews of advances made in the study of several animal taxa, this volume also explores topics such as vibrational communication networks, the interaction of acoustic and vibrational communication, the history of the field, the evolution of signal production and reception and establishing a common vocabulary.

Kristine Albrecht is an influential dahlia breeder who has introduced award-winning dahlia varieties that are a must-have for the show circuit and the floral trade. In this step by step book she explores pollinating strategies for producing unique dahlia seeds, breeding goals, seed germination, seedling care, marketing your new varieties, and more. Kristine has 14 years of breeding experience that she shares with the reader in an informal and intimate style. She also shares beautiful pictures of some of her most popular dahlia hybrids from her urban farm. "Bravo! Thank you so much for sharing your hard-won knowledge with us all. This fantastic book is a gift to the world." -Erin Benzakein, Floret Farm "As an experienced dahlia grower and amateur hybridizer I found this book easy to read, informative, and practical with nuggets of information throughout." - Brad Freeman, Senior Judge, American Dahlia Society "Lively and clearly written guide to hybridizing dahlias to generate new varieties. Suitable for the novice and with tips experienced hands will appreciate." -Dr. Virginia Walbot, Stanford University "A pleasure to read a book from the first hand experience of a hybridist who knows what she is talking about." -Dr. Keith Hammett ~ QSM Plant Breeder

Sunday Suppers at Lucques Princeton University Press

As seen on public television stations nationwide, a revolutionary new approach to playing non-classical music on the piano. Have you ever wished you could play the piano Well, now you can! Scott "The Piano Guy" Houston teaches you to play the way the pros play, in a style enormously simpler than traditional classical piano and with an absolute minimum of note-reading. By focusing on playing the melody with the right hand (one note at a time) and simple chords with the left hand, Houston gives you the tools you need for a lifetime of musical enjoyment. Best of all, your tour guide to this adventure forces you to have fun along the way!
