This brand new Manual focuses on soft tissue surgery of the head, neck and thorax. Together with its companion volume, the BSAVA

Manual of Canine and Feline Abdominal Surgery, it highlights for the veterinary surgeon in general practice the most commonly performed techniques. Procedures that are undertaken by those surgeons with more experience are also discussed so that practitioners can better inform their clients as to clinical options. The Manual begins with a consideration of general patient assessment and stabilization, anaesthesia and analgesia, and postoperative care for surgical conditions of the head, neck and thorax. An illustrated description of surgical instruments and materials follows. Chapters on different organs/systems consider relevant anatomy, clinical signs and diagnostics, and medical treatment in addition to surgical techniques. Emergency management of respiratory distress is described, including instructions on how to perform an emergency tracheostomy. Surgical approaches to the thoracic wall and drainage of the thoracic cavity are described in detail and illustrated. Step-by-step Operative Techniques detail the common procedures in an easy-to-follow practical way, with notes on patient positioning and preparation, instrumentation and postoperative care. Full-colour photographs and specially commissioned drawings illustrate both the Operative Techniques and the accompanying text. Surgical diseases of the head, neck and thorax are considered a challenge by many surgeons. waterfowl, has allowed a change in focus to feature passerine birds in detail for the first time. The Manual starts with the all-important area of husbandry for the three groups, including those kept as working birds as well as ornamental and pet species. More general topics, such as handling, examination, diagnostic procedures and surgery are dealt with across the groups, with notes as required on specific differences. An excellent chapter is included on endoscopy and endosurgery - a major technique for avian patients. The specialist section on raptor disease is very detailed, including an in-depth chapter on foot disease, especially bumblefoot. Recent interest in captive breeding is reflected in detailed chapters on reproduction and paediatrics. The sections dedicated to pigeons and passerine birds look at birds at both the individual and flock level. A wealth of international expert authors, and the BSAVA Manual trademark practical approach and superb full-colour images throughout make this book a wonderful addition to the practice bookshelf.

Thirdly, the business aspects of veterinary practice are explored, including planning, finance, marketing, the client experience and clinical governance. As well as being a daily source of information for veterinary surgeons and managers in companion animal practice, the Manual help support studies for certificates in practice management. It will aid preparation for PSS and VMD inspections, and will be of benefit to all practitioners wanting to improve their quality of service, premises and facilities, and the management of their clinical and support teams.
