This book describes energy management outsourcing as a way of addressing the current energy challenges facing all organizations, namely high and volatile energy prices, the need to mitigate climate change and potential supply constraints as oil production peaks. These problems are likely to intensify in the coming years, yet most organizations have reduced in-house capability to address them, thus outsourcing is increasingly seen as an essential part of any strategy to reduce energy use and carbon emissions. The author describes the basic processes of energy management and how to outsource them in a strategic way to achieve maximum results. The process is based on a new model of energy management looking at total costs, which is presented in the book. The book offers a comprehensive guide to outsourcing energy management, discussing the risks and benefits and taking managers through the process of deciding whether to outsource or not, and finding and assessing an outsourcing partner. Managers looking to reduce energy consumption and carbon emissions through the use of external service providers will find *Outsourcing Energy Management* an ideal 'how to do it' guide.
