This century has seen the costliest hurricanes in U.S. history—but who bears the brunt of these monster storms? Consider this: Five of the most expensive hurricanes in history have made landfall since 2005: Katrina (\$160 billion), Ike (\$40 billion), Sandy (\$72 billion), Harvey (\$125 billion), and Maria (\$90 billion). With more property than ever in harm's way, and the planet and oceans warming dangerously, it won't be long before we see a \$250 billion hurricane. Why? Because Americans have built \$3 trillion worth of property in some of the riskiest places on earth: barrier islands and coastal floodplains. And they have been encouraged to do so by what Gilbert M. Gaul reveals in *The Geography of Risk* to be a confounding array of federal subsidies, tax breaks, low-interest loans, grants, and government flood insurance that shift

the risk of life at the beach from private investors to public taxpayers, radically distorting common notions of risk. These federal incentives, Gaul argues, have resulted in one of the worst planning failures in American history, and the costs to taxpayers are reaching unsustainable levels. We have become responsible for a shocking array of coastal amenities: new roads, bridges, buildings, streetlights, tennis courts, marinas, gazebos, and even spoiled food after hurricanes. *The Geography of Risk* will forever change the way you think about the coasts, from the clash between economic interests and nature, to the heated politics of regulators and developers.

**The Geography of Genius** Hachette UK  
Originally published in 1973. This collection of essays looks at the 'quantitative revolution' and the 'new geography' by some of the geographers who had a significant part in those innovations and looks ahead to further developments. The views in the chapters are

diverse and offer a fascinating glimpse of the discipline of geography as the subject was undergoing such change and becoming more socially committed. They cover theory, spatial-systems theory, forecasting, human ecology and climatology alongside the teaching of the subject. The concerns of the contemporary geographer come across and are of interest today as these areas have developed still more.

[A Cross-Cultural Look at Leadership and Management in China and the US](#) Anchor

WINNER OF: Frantz Fanon Outstanding Book from the Caribbean Philosophical Association Canadian Political Science Association's C.B. MacPherson Prize Studies in Political Economy Book Prize Over the past forty years, recognition has become the dominant mode of negotiation and decolonization between the nation-state and Indigenous nations in North America. The term "recognition" shapes debates over Indigenous cultural distinctiveness, Indigenous rights to land and self-government, and Indigenous peoples' right

to benefit from the development of their lands and resources. In a work of critically engaged political theory, Glen Sean Coulthard challenges recognition as a method of organizing difference and identity in liberal politics, questioning the assumption that contemporary difference and past histories of destructive colonialism between the state and Indigenous peoples can be reconciled through a process of acknowledgment. Beyond this, Coulthard examines an alternative politics—one that seeks to revalue, reconstruct, and redeploy Indigenous cultural practices based on self-recognition rather than on seeking appreciation from the very agents of colonialism. Coulthard demonstrates how a “place-based” modification of Karl Marx’s theory of “primitive accumulation” throws light on Indigenous-state relations in settler-colonial contexts and how Frantz Fanon’s critique of colonial recognition shows that this relationship reproduces itself over time. This framework strengthens his exploration of the ways

that the politics of recognition has come to serve the interests of settler-colonial power. In addressing the core tenets of Indigenous resistance movements, like Red Power and Idle No More, Coulthard offers fresh insights into the politics of active decolonization. *The World* New Society Publisher

The book charts out the history of Geographical Thought from early times to the present day in a single compact volume. Its main focus is on the modern period—beginning with Humboldt and Ritter—more specifically on conceptual developments since the Second World War. **NEW TO THE SECOND EDITION**

The second edition is thoroughly revised and incorporates five new chapters dealing with: □ Nature, Method, Basic Ideas and Conceptual Structure of Geography □ The Problem of Dualities and How it was Resolved □ Nature and Role of Geography as a Social Science—Geographical vs. Sociological Imagination □ Time vis-à-vis Space—The Pattern-Process Perspective in Geographic Research □ New Directions in the Twenty-First Century Human

*The Wealth of Nature* Chicago Review Press

ÔGlobalization, it seems, has propelled the world Ôs uber-wealthy to new heights of power and money, with tremendous repercussions for the other 99.9 percent of us. At a time when neoliberalism has propelled the world into a new Gilded Age, with rising inequality everywhere, an aggressive class war being waged by the wealthy, and billionaires inserting themselves bluntly into the political arena, understanding the behavior and spatiality of the super-rich has acquired a pressing urgency. This volume offers a richly textured suite of essays concerning how the super-rich have restructured local places, transforming landscapes as varied as London and

Kentucky, Ireland and St. Barts, as well as domains as varied as art, thoroughbred horses, and housing. ð Barney Warf, University of Kansas, US

ÔThe worldÔs super-rich, made up of just 11 million people, have access to about US\$42.0 trillion of wealth. These are people who each have a spare million of ÔliquidÔ wealth. Their wealth is roughly equal to two thirds of global GDP. They own most of everything. As the editor of this books states Ô. . . library shelves and the pages of journals remain largely devoid of geographical work on the super-rich ð a startling lacuna this volume sets out to fillÓ. The super-rich now own most of the planet. During the last year their share fell slightly. Times may be changing. Now is the time to begin to study the super-rich in detail, especially if you are worried about where all the wealth has gone.Ô ð Danny Dorling, University of Sheffield, UK This timely and path-breaking book brings together a group of distinguished and emerging international scholars to critically consider the geographical implications of the worldÔs super-rich, a privileged yet

remarkably overlooked group. Emerging from this unique collection is an enlightening picture of the influence of the super-rich over a diverse range of affairs, extending from the shape of urban and rural landscapes to the future of art history. By concentrating on those at the apex of the economic pyramid, this book provides valuable insights to the institutions, practices and cultural values of our society, as well as allowing us a more comprehensive view of the consequences of global capitalism. Presenting case studies from across the globe ð from Singapore to St Barts, London to Lexington ð the spatial and cultural span of the book is wide-ranging and diverse. This truly unique book will prove a fascinating read for academics, researchers and students in the fields of geography, regional and urban studies, sociology, political science and development studies. On Tempo, Culture, And The Pace Of Life Guilford Press

Maps have been a part of human culture since the days of scratching on cave walls, and this richly illustrated history chronicles the road from

simple diagrams used to avoid danger to the complex, navigational charts used today. Displaying an array of historic atlases and a variety of cartography styles, this book allows young readers to test their map-reading skills while discovering the intricate beauty and the wealth of information held within. Geographical concepts are spotlighted through an assortment of guided activities-- including finding the elevation of hills, plotting a course with a magnetic compass, creating three-dimensional land models using a contour map, and performing a plot survey. Drawing the conclusion that the study of geography and maps is crucial to understanding an ever-changing planet, this handbook discloses the ways in which technological advances in cartography can further discussions on climate change, warfare, environmental conservation, population growth, and other timely topics.

*The Geography of Risk* Simon and Schuster

Part travel memoir, part humor, and part twisted self-help guide, *The Geography of Bliss* takes the reader across the

globe to investigate not what happiness is, but WHERE it is. Are people in Switzerland happier because it is the most democratic country in the world? Do citizens of Qatar, awash in petrodollars, find joy in all that cash? Is the King of Bhutan a visionary for his initiative to calculate Gross National Happiness? Why is Asheville, North Carolina so damn happy? In a unique mix of travel, psychology, science and humor, Eric Weiner answers those questions and many others, offering travelers of all moods some interesting new ideas for sunnier destinations and dispositions.

From the Great Wall to Wall Street Routledge  
How does the situation we're in influence the way we behave and think? Professors Ross and Nisbett eloquently argue that the context we find ourselves in substantially affects our behavior in this timely reissue of one of social psychology's classic textbooks. With a new foreword by Malcolm Gladwell, author of *The Tipping Point*.

What may happen now

that so many more children are denied exposure to wilderness than at any other time in human history?  
Reflections on Richard Hartshorne's The Nature of Geography U of Minnesota Press  
An award-winning professor of psychology examines the divergent ways in which eastern and western cultures view the world, offering suggestions about how today's interdependent global cultures may be bridged. Reprint. 15,000 first printing.

*How the Creative Economy Is Making Where to Live the Most Important Decision of Your Life* Cambridge University Press

This book focuses on a singular cause of male violence—the perpetrator's sense of threat to one of his most valued possessions, namely, his reputation for strength and toughness. The theme of this book is that the Southern United States had—and has—a type of culture of honor.

**Modern Geographical Thought** The Geography of Thought  
How Asians and Westerners Think Differently...and Widely adopted, this text critically evaluates the leading theories of

international economic development, from classical economic and sociological models to Marxist, poststructuralist, and feminist perspectives. No other book provides such comprehensive coverage or links the theories as incisively to contemporary world events and policy debates. Reexamining neoliberal conceptions of economic growth, the authors show what a more just and democratic form of development might look like today.

Contentions, Arguments, Alternatives Palgrave Macmillan

"The most influential thinker, in my life, has been the psychologist Richard Nisbett. He basically gave me my view of the world." - Malcolm Gladwell, *New York Times Book Review*  
Scientific and philosophical concepts can change the way we solve problems by helping us to think more effectively about our behavior and our world. Surprisingly, despite their utility, many of these tools remain unknown to most of us. In *Mindware*, the world-renowned psychologist Richard E. Nisbett presents these ideas in clear and accessible detail. Nisbett

has made a distinguished career of studying and teaching such powerful problem-solving concepts as the law of large numbers, statistical regression, cost-benefit analysis, sunk costs and opportunity costs, and causation and correlation, probing the best methods for teaching others how to use them effectively in their daily lives. In this groundbreaking book, Nisbett shows us how to frame common problems in such a way that these scientific and statistical principles can be applied to them. The result is an enlightening and practical guide to the most essential tools of reasoning ever developed—tools that can easily be used to make better professional, business, and personal decisions.

**Perspectives of Social Psychology** Oxford University Press  
The New York Times Bestseller “A superb introduction to the world and global issues. Richard Haass has written something that is brief, readable, and yet comprehensive—marked throughout by his trademark intelligence and common sense.”  
—Fareed Zakaria An invaluable primer from

Richard Haass, president of the Council on Foreign Relations, that will help anyone, expert and non-expert alike, navigate a time in which many of our biggest challenges come from the world beyond our borders. We live in a global era, in which what happens thousands of miles away often affects our lives. Although the United States is bordered by two oceans, those oceans are not moats. And the so-called Vegas rule—what happens there stays there—does not apply. Globalization can be both good and bad, but it is not something that individuals or countries can opt out of. The choice we face is how to respond. *The World* focuses on history, what makes each region of the world tick, the many challenges globalization presents, and the most influential countries, events, and ideas, to provide readers with the background they need to make sense of this complicated and interconnected world. Thought and Feeling Sarah Crichton Books  
Table of contents  
Directions in Geography Routledge  
Hong Gildong, a brilliant but illegitimate son of a noble government

minister, cannot advance in society and embarks on a series of adventures, joining a band of outlaws, vanquishing assassins and monsters, and founding his own kingdom.

*Charting the World*

Edward Elgar Publishing  
*Thinking: A Memoir* is both a personal history and an intellectual autobiography describing how people reason and make inferences about the world, why errors in reasoning occur and how much you can improve reasoning.

The Person and the Situation Twelve

When Richard Nisbett showed an animated underwater scene to his American students, they zeroed in on a big fish swimming among smaller fish. Japanese subjects, on the other hand, made observations about the background environment...and the different "seeings" are a clue to profound underlying cognitive differences between Westerners and East Asians. As Professor Nisbett shows in *The Geography of Thought* people actually think - and even see - the world differently, because of differing ecologies, social structures, philosophies, and educational systems

that date back to ancient Greece and China, and that have survived into the modern world. As a result, East Asian thought is "holistic" - drawn to the perceptual field as a whole, and to relations among objects and events within that field. By comparison to Western modes of reasoning, East Asian thought relies far less on categories, or on formal logic; it is fundamentally dialectic, seeking a "middle way" between opposing thoughts. By contrast, Westerners focus on salient objects or people, use attributes to assign them to categories, and apply rules of formal logic

to understand their behaviour.

A Geography Of Time  
Vintage

Richard Peet looks in detail at the main trends in human geographic thought over the last thirty years, relating these to broader themes in philosophy and social theory. Beginning with existential phenomenology and humanistic geography, the book covers Marxism and radical geography, structuralism, structuration theory, realism, locality studies, various streams of poststructuralism and postmodernism, and feminism. Each chapter examines a few theories

in depth, concentrating on the major works and the nature of their contribution. Many of the ideas covered are dense and complex, but the reader is drawn gradually into the text through notions understandable to students. After spending time with this book the reader should be able to tackle virtually any philosophical theme in contemporary geographic thought. The book will be central to courses in geographical thought and the history of geographical thought, and as part of virtually all courses in human geography which entail philosophy and theory.
