Following the COVID shock, supervisors encouraged banks to use capital buffers to support the recovery. However, banks have been reluctant to do so. Provided the market expects a bank to rebuild its buffers, any draw-down will open up a capital shortfall that will weigh on its share price. Therefore, a bank will only decide to use its buffers if the value creation from a larger loan book offsets the costs associated with a capital shortfall. Using market expectations, we calibrate a framework for assessing the usability of buffers. Our results suggest that the cases in which the use of buffers make economic sense are rare in practice.

Unscaled identifies the forces that are reshaping the global economy and turning one of the fundamental laws of business and society -- the economies of scale -- on its head. An innovative trend combining technology with economics is unraveling behemoth industries -- including corporations, banks, farms, media conglomerates, energy systems, governments, and schools--that have long dominated business and society. Size and scale have become a liability. A new generation of upstarts is using artificial intelligence to automate tasks that once required expensive investment, and "renting" technology platforms to build businesses for hyper-focused markets, enabling them to grow big without the bloat of giant organizations. In *Unscaled*, venture capitalist Hemant Taneja explains how the unscaled phenomenon allowed Warby Parker to cheaply and easily start a small company, build a better product, and become a global competitor in no time, upending entrenched eyewear giant Luxottica. It similarly enabled Stripe to take on established payment processors throughout the world, and Livongo to help diabetics control their disease while simultaneously cutting the cost of treatment. The unscaled economy is remaking massive, deeply rooted industries and opening up fantastic possibilities for

entrepreneurs, imaginative companies, and resourceful individuals. It can be the model for solving some of the world's greatest problems, including climate change and soaring health-care costs, but will also unleash new challenges that today's leaders must address.

Corporate Diplomacy Routledge

We are entering a golden age of alternative investments.

Alternative asset classes including private equity, hedge funds, catastrophe reinsurance, real assets, non-traditional credit, alternative risk premia, digital assets, collectibles, and other novel assets are now available to investors and their advisors in a way that they never have been before. The pursuit of diversification is not as straightforward as it once was — and the classic 60/40 portfolio may no longer be sufficient in helping investors achieve their most important financial goals. With the ever-present need for sustainable income and risk management, alternative assets are poised to play a more prominent role in investor portfolios. Phil Huber is the Chief Investment Officer for a multi-billion dollar wealth management firm and acts as your guide on a journey through the past, present, and future of alternative investments. In this groundbreaking tour de force, he provides detailed coverage across the spectrum of alternative assets: their risk and return characteristics, methods to gain exposure, and how to fit everything into a balanced portfolio. The three parts of *The Allocator's Edge* address: 1. Why the future may present challenges for traditional portfolios; why the adoption of alternatives has remained elusive for many allocators; and why the case for alternatives is more compelling than ever thanks to financial evolution and innovation. 2. A comprehensive survey of the asset classes and strategies that comprise the vast universe of alternative investments. 3. How to build durable and resilient portfolios that harness alternative assets; and how to sharpen the client communication skills needed to establish proper expectations and make the unfamiliar familiar. *The Allocator's Edge* is written with the practitioner in mind, providing financial advisors, institutional allocators, and other professional investors the confidence and courage needed to effectively understand, implement, and translate alternatives for their clients. Alternative investments are the allocator's edge for the portfolios of tomorrow — and this is the essential guide for advisors and investors looking to seize the opportunity.

The book deals with the questions that really matter for green finance: Where will the money to finance the transition to a low carbon environment come from, how far do the banks' balance sheets stretch and where will the rest of the money come from? How much can we rely on the capital markets, especially in the EU, to get money to the parts of the economy which really need it, without greenwashing? How do governments organize not just a transition, but a just transition to a low carbon environment? Is it time to revisit received ideas about the proper role for central banks?

China's efforts to transition from an economy driven by investment and exports to one based on private consumption and services are roiling global markets. Its problems are compounded by an economic slowdown, rising debt levels, languishing real estate market, and lagging productivity growth. In these essays, scholars from the Peterson Institute for International Economics (PIIE) recommend a number of reforms for Chinese leaders to consider, including steps to further open up its capital account and develop its financial markets. This collection of papers is part of a series of interactions and discussions between PIIE and the China Finance 40 (CF40) Forum, which began in 2012. The papers are intended to illuminate the challenges facing China as it engages increasingly with the global economy and builds on its phenomenal economic success of the past three decades.

Managers of multinational organizations are struggling to win the strategic competition for the hearts and minds of external stakeholders. These stakeholders differ fundamentally in their worldview, their understanding of the market economy and their aspirations and fears for the future. Their collective opinions of managers and corporations will shape the competitive landscape of the global economy and have serious consequences for businesses that fail to meet their expectations. This important new book argues that the strategic management of relationships with external stakeholders - what the author calls "Corporate Diplomacy" - is not just canny PR, but creates real and lasting business value. Using a mix of colourful examples, practically relevant tools and considered perspectives, the book hones in on a fundamental challenge that managers of multinational corporations face as they strive to compete in the 21st century. As falling communication costs shrink, the distance between external stakeholders and shareholder value is increasingly created and protected through a strategic integration of the external stakeholder facing functions. These include government affairs, stakeholder relations, sustainability, enterprise risk management, community relations and corporate communications. Through such integration, the place where business, politics and society intersect need not be a source of nasty surprises or unexpected expenses. Most of the firms profiled in the book are now at the frontier of corporate diplomacy. But they didn't start there. Many of them were motivated by past failings. They fell into conflicts with critical stakeholders - politicians, communities, NGO staffers, or activists - and they suffered. They experienced delays or disruptions to their operations, higher costs, angry customers, or thwarted attempts at expansion. Eventually, the managers of these

companies developed smarter strategies for stakeholder engagement. They became corporate diplomats. The book draws on their experiences to take the reader to the forefront of stakeholder engagement and to highlight the six elements of corporate diplomacy.

All around the world, as growing numbers of tourists and recreational visitors flock to protected and other natural areas stimulated by a renewed search for physical, mental, and even spiritual health and wellbeing, different practices and behaviours emerge. This book brings together experiences and perspectives from many countries around the world. On the demand side, the experiences are united by the desire of tourists to find a real and regenerating connection in nature. On the supply side, designing and managing tourist systems that preserve natural capital in good condition requires great professionalism to dynamically maintain a fragile and delicate balance between tourists, local communities, and nature. By understanding the attitudes and emerging norms of behaviour within the context of nature-based tourism, we can begin to sketch a roadmap to enable more holistic, enjoyable, healthy and responsible visitor experiences; facilitate ecosystem conservation; contribute to the mental and physical wellbeing of tourists and outdoor recreationists; and build sustainable economies and resilient destinations and livelihoods. This book is of great relevance for academic researchers, advanced tourism and conservation students, and practitioners working in nature-based tourism and conservation, especially those with a focus on natural destinations, as well as those interested in consumer behaviour, business and management, recreation, and sustainable tourism development.
