System The skeleton is subdivided into two divisions: the axial skeleton, the bones that form the longitudinal axis of the body, and the appendicular skeleton, the bones

of the limbs and girdles. Skeletal System Anatomy and Physiology - Nurseslabs Introduction: The adult human skeleton is a framework of 206 bones [...]. Scapula Bone - Anterior Anatomy The bone markings of the anterior scapula include the superior border, medial border, lateral border, superior angle, lateral angle, inferior angle, coracoid process, suprascapular notch, glenoid cavity, infraglenoid tubercle, and the suprascapular fossa. transcript. Each of these layers is called a lamellae. In the center of these layers is a canal called the haversian canal, or central canal. In this canal travels blood vessels, lymph vessels and nerves as well. Now in between these sheets of lamellae are these tiny channels that are called canaliculi, which you can kind of see here. Microscopic structure of bone - the Haversian system ... The skeletal system quizzes. There are 206 bones in a typical human body, providing a range of important functions: They provide a framework that supports the body They protect the organs within the body cavities from mechanical injury They contain and protect the red bone marrow They provide a storage site for inorganic salts (e.g. Free Anatomy Quiz - The Skeletal System Section Human Circulatory System - Duration: 4:53.
