**Individual Participant Data Meta-Analysis** Jones & Bartlett Learning  
**Individual Participant Data Meta-Analysis: A Handbook for Healthcare Research** provides a comprehensive introduction to the fundamental principles and methods that healthcare researchers need when considering, conducting or using individual participant data (IPD) meta-analysis projects. Written and edited by researchers with substantial experience in the field, the book details key concepts and practical guidance for each stage of an IPD meta-analysis project, alongside illustrated examples and summary learning points. Split into five parts, the book chapters take the reader through the journey from initiating and planning IPD projects to obtaining, checking, and meta-analysing IPD, and appraising and reporting findings. The book initially focuses on the synthesis of IPD from randomised trials to evaluate treatment

effects, including the evaluation of participant-level effect modifiers (treatment-covariate interactions). Detailed extension is then made to specialist topics such as diagnostic test accuracy, prognostic factors, risk prediction models, and advanced statistical topics such as multivariate and network meta-analysis, power calculations, and missing data. Parkinson's disease (PD) is a common neurodegenerative disorder characterized by a slowly progressive motor dysfunction and loss of dopaminergic neurons located in the substantia nigra innervating the striatum, causing depletion of dopamine, which leads to a hyperactivation of the striatal medial spiny neurons. To understand the pathophysiological details of PD and for developing and screening the novel therapeutic and/or neuroprotective substances, animal models for PD induced by neurotoxins have been developed. Among them, 1-methyl-4-phenyl-1,2,3,6-tetrahydropyridine (MPTP) is the most commonly used since it causes a selective loss of dopaminergic neurons in the substantia nigra and induces typical PD-like symptoms both in human and in experimental animals with a relatively simple application. In this chapter, we first overview the characteristics of PD and animal models with neurotoxins to establish, then focus on, MPTP-treated mouse and common marmoset models for PD with their practical experimental protocols and applications.
