Рациональное общество. Том 3 (избранные статьи): очерки «философии движения» Cambridge Scholars Publishing
 Modern trends in geopolitics have raised serious questions about the future global and regional architecture of the world system. In the case of the Eurasian Economic Union, these questions bring up important issues for debate: What is the Eurasian Economic Union? What theoretical concepts could be applied for modern Eurasian integration? Why is the Eurasian Economic Union forming? Most importantly, what prospects does this Union have in the framework of the modern geopolitical situation? This book explores the process of Eurasian integration in the modern global world. The creation of the Eurasian Economic Union has become a topical issue in modern Russian foreign policy. Neo-Eurasianist ideas can be viewed as a geopolitical basis and rationale for the Eurasian Economic Union that may constitute an integrational structure, consolidating the post-Soviet area and neighboring regions. This book argues that Eurasia is a region representing an organic integrity due to close mentality, common and centuries-long history, common language of international communication, a multitude of economic ties, and an identical level of technological development across all countries within the post-Soviet area. Yet, advancement of the Eurasian integration idea into practical implementation should have new objective suppositions as well. These are defined by the contemporary economic, political, and ethno-cultural processes in the post-Soviet space.

The Matica and Beyond International Science Group

This book explores the ontology of war and peace. Using the results of empirical and theoretical research in the field of geophilosophy, as well as neuroscience, psychology, social philosophy and military history, it defines axiomatics of the theory of war and peace; formulates its consequences; tests the theory on the geophilosophy of Europe; and offers a new theoretical basis for the definition of the European Security Strategy. The text proves that war and peace are ways to achieve a regulatory compromise between manifestations of the active principle, which was initially laid in the foundation of the human mentality, and the influence of the external environment through natural selection.

Translation Studies and Translation Practice Springer

Composed of selected research papers, this book brings together new developments and processes for managing complexity. The included works originate from renowned complexity thinkers, well established practitioners and new researchers in the area of complexity and detail issues of common interest.

Growing Up in the North Caucasus Forum Translationswissenschaft

This monograph explores the dire ecological, social, and economic situations facing mankind through comprehensive analyses of global ecological issues, poverty, environmental stability and regulation, and sustainable development. Drs. Victor Danilov-Danil'yan and Igor Reyf discuss the development of ecology as a science, the increasing concern among scientists and public servants for the unsustainability of current economic and

demographic trends, and the dire consequences our planet and civilization are already suffering as a result of the ongoing environmental and social crisis. They also address the philosophical implications of the crisis, and suggest possible solutions. The book conveys complex objects of study, namely the biosphere and the harmful anthropogenic processes it has been experiencing for decades, so that the work is accessible without omitting key components of the subject matter. Readers will learn about the social and economic contributors to a threatened biosphere, the mechanisms that maintain the stability of the global environment, and the scales at which sustainable development and preservation can be applied to initiate environmental regulation. Though intended to appeal to the general public and non-specialists, environmental researchers, organizations involved in sustainable development and conservation, and students engaged in ecology, environment, and sustainability studies will also find this book of interest.

Caucasian Albania CRC Press

This book considers theoretical issues of the ethnocultural landscape concepts at large as well as examples of its practical application in ethnic communities of Siberia. It reveals the patterns of the processes of penetration, settlement, development and adaptation of Siberian populations from Paleolithic time to Russian colonization in the era of the Russian Empire, during Soviet modernization and in the face of modern challenges. The authors consider the principal interactions (character, stages, conditions), system-related evidence and phenomena that determine the diverse specifics and multidirectional vectors of a change in the ethnic (social, cultural, economic, legal) presence in large subregions of Siberia in the mirror of various theoretical paradigms. This transdisciplinary volume appeals to researchers, lecturers and students in the fields of geography, history, philosophy, anthropology, ecology, archaeology and interfaces to many other disciplines.

Данный сборник представляет итоговые системные исследования автора. Они отличаются эволюционно-историческим подходом, который позволил раскрыть базисные системные закономерности, позволяющие современному обществу перейти к наиболее рациональной организованности комплексного (экономического) движения к объективно необходимому могуществу относительно окружающего мира. Этот итоговый сборник может быть особо полезным для ученых-исследователей в областях социальной и экономической теории.

Введение в языкознание в 2 ч. Часть 2. Учебник для вузов Litres

This book highlights recent findings in industrial, manufacturing and mechanical engineering, and provides an overview of the state of the art in these fields, mainly in Russia and Eastern Europe. A broad range of topics and issues in modern engineering is discussed, including the dynamics of machines and working processes, friction, wear and lubrication in machines, surface transport and technological machines, manufacturing engineering of industrial facilities, materials engineering, metallurgy, control systems and their industrial applications, industrial mechatronics, automation and robotics. The book gathers selected papers presented at the 7th International Conference on Industrial Engineering (ICIE), held in Sochi, Russia, in May 2021. The authors are experts in various fields of engineering, and all papers have been carefully reviewed. Given its scope, the book will be of interest to a wide readership, including mechanical and production engineers, lecturers in engineering disciplines, and engineering graduates.

In legal interpretation, where does meaning come from? Law is made from language, yet law, unlike other language-related disciplines, has not so far experienced its "pragmatic turn" towards inference and the construction of meaning. This book investigates to what extent a pragmatically based view of linguistic and legal interpretation can lead to new theoretical views for law and, in addition, to practical consequences in legal decision-making. With its traditional emphasis on the letter of the law and the immutable stability of a text as legal foundation, law has been slow to take the pragmatic perspective: namely, the language-user's experience and activity in making meaning. More accustomed to literal than to pragmatic notions of meaning, that is, in the text rather than constructed by speakers and hearers the disciplines of law may be culturally resistant to the

pragmatic turn. By bringing together the different but complementary perspectives of pragmatists and lawyers, this book addresses the issue of to what extent legal meaning can be productively analysed as deriving from resources beyond the text, beyond the letter of the law. This collection revisits the feasibility of the notion of literal meaning for legal interpretation and, at the same time, the feasibility of pragmatic meaning for law. Can explications of pragmatic meaning support court actions in the same way concepts of literal meaning have traditionally supported statutory interpretations and court judgements? What are the consequences of a user-based view of language for the law, in both its practices of interpretation and its definition of itself as a field? Readers will find in this collection means of approaching such questions, and promising routes for inquiry into the genre- and field-specific characteristics of inference in law. In many respects, the problem of literal vs. pragmatic meaning confined to the text vs. reaching beyond it will appear to parallel the dichotomy in law between textualism and intentionalism. There are indeed illuminating connections between the pair of linguistic terms and the more publicly controversial legal ones. But the parallel is not exact, and the linguistic dichotomy is in any case anterior to the legal one. Even as linguistic-pragmatic investigation may serve legal domains, the legal questions themselves point back to central conditions of all linguistic meaning.

Comprehensive Energy Systems, Seven Volume Set provides a unified source of information covering the entire spectrum of energy, one of the most significant issues humanity has to face. This comprehensive book describes traditional and novel energy systems, from single generation to multi-generation, also covering theory and applications. In addition, it also presents high-level coverage on energy policies, strategies, environmental impacts and sustainable development. No other published work covers such breadth of topics in similar depth. High-level sections include Energy Fundamentals, Energy Materials, Energy Production, Energy Conversion, and Energy Management. Offers the most comprehensive resource available on the topic of energy systems Presents an authoritative resource authored and edited by leading experts in the field Consolidates information currently scattered in publications from different research fields (engineering as well as physics, chemistry, environmental sciences and economics), thus ensuring a common standard and language

Islam and the Orthodox Church in contemporary Russia are usually studied in isolation from each other, and each in relation to the Kremlin; the latter demands the development of a home-grown and patriotic 'religious traditionalism, as a bulwark against subversive 'non-traditional' imports. This volume breaks new ground by focusing on charismatic missionaries from both religions who bypass the hierarchies of their respective faith organizations and challenge the 'traditionalism' paradigm from within Russia's many religious traditions, and who give new meanings to the well-known catchwords of Russia's identity discourse. The Moscow priest Daniil Sysoev confronted the Russian Orthodox Church with 'Uranopolitism', a spiritual vision that defies patriotism and nationalism; the media-savvy Geidar Dzhemal projected an 'Islamic Eurasianism' and a world revolution for which Russia's Muslims would provide the vanguard; and the Islamic terrorist Said Buriatskii found respect among left- and right-wing Russians through his Islamic adaptation of Lev Gumilev's 'passionarity' paradigm. On the other side, Russian experts and journalists who propagate the official paradigm of Russia's 'traditional Islam' argue from either Orthodox or secularist perspectives, and fail to give content to the concept. This allows even moderate Salafis to argue that their creed is Russia's real 'traditionalist' Islam. This book was originally published as a special issue of *Islam and Christian-Muslim Relations*.

This is an increasingly timely book, focusing on issues arising from the impact of COVID-19 on the health care law of the Central and East European countries. It deals with dualism and system of health care law, depicts legal personality in the field of health care, examines property rights and turnover of human tissues, considers moral rights in this field, intellectual ownership in the field of medicine and pharmacy, contracts on health care and contracts on rendering medical services, the legal relationships of transplantology, post-mortem reproduction and donorship, features of family personal property rights in the field of health care, problems of legal regulation of medical workers labour, investigates private legal relationships of surrogate motherhood with foreign element. Special attention is given to the alternative resolution of health care disputes and impact of pandemic on the effective health rights protection. The book is intended for wide auditoria of scholars and practitioners, who engaged in health care rights protection, as well as judges and practicing lawyers, graduate and undergraduate students.

Proceedings of the 7th International Conference on Industrial Engineering (ICIE 2021) Springer Nature

This book contends that the discourses of jihadism in Russia's North Caucasus, and their offshoots in other parts of the Russian Federation, are not just reflections of jihadi ideologies that came from abroad, rather that post-Soviet jihadism is a phenomenon best understood when placed in the broader cultural environment in which it emerged, an environment which comprises the North Caucasus, the whole of Russia, and beyond. It examines how post-Soviet jihadism is also part of global processes, in this case, global jihadism, explores how post-Soviet jihadism bears the imprint of the preceding Soviet context especially in terms of symbols, discursive tools, interpretational frameworks, and dissemination strategies, and

discusses how, ironically, Russian-speaking jihadism is an expansionist idea for uniting all Russian regions on a supra-ethnic principle, but an idea that was not born in Moscow or St. Petersburg. Overall, the book demonstrates that Russian-speaking jihadism is a completely new ideology, which nevertheless has its origins in the intellectual and cultural heritage of the Soviet era and in the broader trends of post-Soviet society and culture. *Russia's Islam and Orthodoxy beyond the Institutions* Journal of Contemporary Urban Affairs

TRANSLATA II was the second in a series of triennial conferences on Translation and Interpreting Studies, held at the University of Innsbruck. The series is conceptualized as a forum for Translation Studies research. This volume includes selected contributions on translation theory and general issues in Translation Studies, as well as on translation theory and translation practice. The contributors focus also on literary translation, contrastive linguistics and the relation between semantics and cognition, as well as the relation between text, context and culture. The book also regards the translation process, the competence and quality of translation and professional aspects in translation and interpreting.

25 Problems for STEM Education introduces a new and emerging course for undergraduate STEM programs called Physical-Mathematical Informatics. This course corresponds with the new direction in education called STE(A)M (Science, Technology, Engineering, [Art] and Mathematics). The book focuses on undergraduate university students (and high school students), as well as the teachers of mathematics, physics, chemistry and other disciplines such as the humanities. This book is suitable for readers who have a basic understanding of mathematics and math software. Features Contains 32 interesting problems (studies) and new and unique methods of solving these physical and mathematical problems using a computer as well as new methods of teaching mathematics and physics Suitable for students in advanced high school courses and undergraduates, as well as for students studying Mathematical Education at the Master's or PhD level One of the only books that attempts to bring together ST(E)AM techniques, computational mathematics and informatics in a single, unified format
